 - b. Dikes are structurally sound and protected against wave action and erosion. ()
 - c. Intake structures and devices meet requirements of Subsection 515.01. ()
 - d. Point of influent flow is separated from the point of withdrawal. ()
 - e. Separate pipes are provided for influent to and effluent from the reservoir. ()
- 04. Reservoirs.** Impoundments and reservoirs shall provide, where applicable: ()
- a. Removal of brush and trees to high water elevation. ()
 - b. Protection from floods during construction. ()
 - c. Abandonment of all wells which will be inundated, in accordance with requirements of the Idaho Department of Water Resources. See Rules of the Idaho Water Resources Board referenced in Subsection 002.02. ()

516. -- 517. (RESERVED)

518. FACILITY AND DESIGN STANDARDS: ADDITIONAL DESIGN CRITERIA FOR SURFACE WATER TREATMENT.

Performance criteria for surface water treatment facilities are specified in National Primary Drinking Water Regulations, as set forth in Sections 300, 301, and 310 of these rules. Surface water treatment systems must comply with applicable general design requirements in Section 503. In addition, the following design requirements apply specifically to surface water treatment facilities: ()

01. Engineering Design Requirements. The system shall ensure that filtration and disinfection facilities for surface water or ground water directly influenced by surface water sources are designed, constructed and operated in accordance with all applicable engineering practices designated by the Department. The design of the water treatment plant must consider the worst raw water quality conditions that are likely to occur during the life of the facility. ()

02. Removal of Pathogens. Filtration facilities (excluding disinfection) shall be designed, constructed

and operated to achieve at least two (2) log removal of *Giardia lamblia* cysts, two (2) log removal of *Cryptosporidium* oocysts, and one (1) log removal of viruses, except as allowed under Subsection 518.09.b. ()

03. Disinfection. Disinfection facilities shall be designed, constructed and operated so as to achieve at least point five zero (0.50) log inactivation of *Giardia lamblia* cysts; and ()

a. Two (2) log inactivation of viruses if using conventional and slow sand filtration technology; or ()

b. Three (3) log inactivation of viruses if using direct and diatomaceous earth filtration technology; or ()

c. Four (4) log inactivation of viruses if using alternate filtration technology. ()

d. Four (4) log inactivation of viruses if filtration treatment is not used. ()

04. Enhanced Disinfection. Higher levels of disinfection than specified under Subsection 518.03 may be required by the Department in order to provide adequate protection against *Giardia lamblia* and viruses. ()

05. Filter to Waste. For plants constructed after December 31, 1992, each filter unit must be capable of filter to waste. For plants constructed prior to December 31, 1992, each filter unit must be capable of filter to waste unless the system demonstrates through continuous turbidity monitoring or other means acceptable to the Department that water quality is not adversely affected following filter backwashing, cleaning or media replacement. ()

06. Continuous Turbidity Monitoring. For conventional, direct, membrane, and diatomaceous earth filtration technology, equipment must be provided to continuously measure the turbidity of each filter unit. ()

07. Continuous Monitoring of Disinfectant. Equipment must be provided and operated for continuous measurement of disinfectant residual prior to entry to the distribution system, unless the system serves fewer than three thousand three hundred (3,300) people. ()

08. Continuous Operation Required. Diatomaceous earth filtration facilities shall include an alternate power source with automatic startup and alarm, or be designed in a manner to ensure continuous operation. ()

09. Acceptable Technology. The purveyor shall select a filtration technology acceptable to the Department. ()

a. Conventional, direct, membrane, slow sand, diatomaceous earth, and membrane filtration technologies are generally acceptable to the Department on a case-by-case basis. ()

b. Alternate filtration technologies may be acceptable if the purveyor demonstrates all of the following to the satisfaction of the Department: ()

i. That the filtration technology: ()

(1) Is certified and listed by the National Sanitation Foundation (NSF) under Standard 53, Drinking Water Treatment Units - Health Effects, as achieving the NSF criteria for cyst reduction; or ()

(2) Removes at least ninety-nine percent (99%) (two (2) logs) of *Cryptosporidium* oocysts or surrogate particles and removes or inactivates at least ninety-nine percent (99%) (two (2) logs) of *Giardia lamblia* cysts or *Giardia lamblia* cyst surrogate particles in a challenge study acceptable to the Department. ()

ii. Based on field studies or other means acceptable to the Department, it must be demonstrated that the filtration technology has the following capabilities: ()

(1) In combination with disinfection treatment, consistently achieves at least ninety-nine percent (99%) (two (2) logs) removal of *Cryptosporidium* oocysts or surrogate particles and at least ninety-nine and nine tenths

percent (99.9%) (three (3) logs) removal or inactivation of *Giardia lamblia* cysts and ninety-nine and ninety-nine hundredths percent (99.99%) (four (4) logs) removal or inactivation of viruses; and ()

(2) Meets the turbidity performance requirements of 40 CFR 141.73 (b). ()

10. Pilot Studies. The system shall conduct pilot studies in accordance with the following requirements and in accordance with Subsection 501.19 for all proposed filtration facilities and structural modifications to existing filtration facilities, unless the Department modifies the requirements in writing: ()

a. The system shall obtain the Department's approval of the pilot study plan before the pilot filter is constructed and before the pilot study is undertaken. ()

b. The design and operation of the pilot study shall be overseen by an Idaho licensed professional engineer. ()

c. The system's pilot study plan shall identify at a minimum: ()

i. The objectives of the pilot study; ()

ii. Pilot filter design; ()

iii. Water quality and operational parameters to monitor; ()

iv. Amount of data to collect; and ()

v. Qualifications of the pilot plant operator. ()

d. The system shall ensure that the pilot study is: ()

i. Conducted to simulate conditions of the proposed full-scale design; ()

ii. Conducted for at least twelve (12) consecutive months or for a shorter period upon approval by the Department; ()

iii. Conducted to evaluate the reliability of the treatment system to achieve applicable water quality treatment criteria specified for filtration systems in 40 CFR 141.72 and 40 CFR 141.73; and ()

iv. Designed and operated in accordance with good engineering practices documented in references acceptable to the Department. ()

11. Redundant Disinfection. Surface water systems constructed after July 1, 1985, are required to install redundant disinfection components or maintain a backup unit on site as required to maintain constant application of disinfectant whenever water is being delivered to the distribution system. ()

519. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT; DESIGN STANDARDS FOR MICROSCREENING.

A microscreen may be used to reduce nuisance organisms and organic loadings. It shall not be used in place of filtration or coagulation in the preparation of water for filtration. ()

01. Design Considerations. The following shall be taken into account during design: ()

a. The nature of the suspended matter to be removed. ()

b. The corrosiveness of the water. ()

c. The effect of chlorination, when required as pre-treatment. ()

- d. The duplication of units for continuous operation during equipment maintenance. ()
- e. Automated backflushing operation when used in conjunction with microfiltration treatment. ()
- 02. Design Requirements.** Design shall provide the following: ()
 - a. A durable, corrosion-resistant screen. ()
 - b. A by-pass arrangement. ()
 - c. Protection against back-siphonage when potable water is used for washing. ()
 - d. Proper disposal of water used to wash the microscreen. ()

520. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT: CLARIFICATION PROCESSES.

Treatment facilities designed to include clarification for processing surface water shall meet the following requirements: ()

01. Two Units Required. A minimum of two (2) units for redundancy shall be provided for flocculation and sedimentation such that plant design capacity can be maintained with any component out of service for maintenance or repairs. ()

02. Parallel or Serial Operation. The units shall be capable of being operated either in series or parallel where softening is performed. ()

03. Independent Units. The units shall be constructed in such a way that each can be taken out of service without disrupting operation, and with drains or pumps sized to allow dewatering in a reasonable period of time. ()

04. Manual Start-Up. The units shall be started manually following shutdown. ()

05. Pre-Treatment. Waters exhibiting high turbidity may require pretreatment, usually sedimentation with or without the addition of coagulation chemicals. When presedimentation is provided, the following requirements must be met: ()

a. Incoming water shall be dispersed across the full width of the line of travel as quickly as possible. Short circuiting must be prevented. ()

b. Provisions for bypassing pre-sedimentation basins shall be included. ()

c. The need for redundant pretreatment components shall be evaluated according to the type and necessity of the pretreatment. ()

06. Rapid Mix. Unless otherwise approved by the Department based on documentation provided by the design engineer, a rapid mix device or chamber is required prior to flocculation, clarification, sedimentation, and settler units. The need for redundant rapid mix components shall be evaluated. Rapid mix shall mean the rapid dispersion of chemicals throughout the water to be treated, usually by violent agitation. The engineer shall submit the design basis for the velocity gradient (G value) selected, considering the chemicals to be added and water temperature, color and other related water quality parameters. Basins or mixing chambers shall be equipped with devices capable of providing adequate mixing for all treatment flow rates. ()

07. Flocculation. Flocculation shall mean the gathering together of fine particles in water by gentle mixing after the addition of coagulant chemicals to form larger particles. ()

a. Basin inlet and outlet design shall minimize short-circuiting and destruction of floc. A drain,

pumps, or a combination of both drain and pumps shall be provided to accomplish dewatering and sludge removal. ()

b. The flow-through velocity shall not be less than one-half (0.5) nor greater than one and one-half (1.5) feet per minute with a detention time for floc formation of at least thirty (30) minutes unless otherwise approved by the Department. ()

c. Agitators shall be driven by variable speed drives. ()

d. Flocculation and sedimentation basins shall be as close together as possible. The velocity of flocculated water through pipes or conduits to settling basins shall be not less than one-half (0.5) nor greater than one and one-half (1.5) feet per second. Allowances must be made to minimize turbulence at bends and changes in direction. ()

08. Small Systems May Use Baffling. Baffling may be used to provide for flocculation in small plants upon approval by the Department. ()

09. Sedimentation Units. The following criteria apply to conventional sedimentation units: ()

a. A minimum of two (2) hours of settling time shall be provided following flocculation unless adequate settling in less time can be demonstrated. ()

b. Inlets shall be designed to distribute the water equally and at uniform velocities. ()

c. Outlet weirs or submerged orifices shall maintain velocities suitable for settling in the basin and minimize short-circuiting. Outlet weirs shall be designed so that the rate of flow over the outlet weirs or through the submerged orifices shall not exceed twenty-thousand (20,000) gallons per day per foot of the outlet launder. The entrance velocity through the submerged orifices shall not exceed one-half (0.5) feet per second. ()

d. The velocity through settling basins shall not exceed one-half (0.5) feet per minute. The basins must be designed to minimize short-circuiting. Fixed or adjustable baffles must be provided as necessary to achieve the maximum potential for clarification. ()

e. When an overflow weir or pipe is provided the overflow shall discharge by gravity with a free fall at a location where the discharge will be noted. ()

f. Adequate sludge collection equipment that ensures proper basin coverage shall be provided and basins must be provided with a means for dewatering. ()

g. Flushing lines or hydrants shall be provided and must be equipped with backflow prevention devices acceptable to the Department. ()

h. Sludge removal design shall provide that sludge pipes are not less than three (3) inches in diameter and arranged so as to facilitate cleaning. Entrance to sludge withdrawal piping shall be designed to prevent clogging. Provision shall be made for the operator to observe and sample sludge being withdrawn from the unit. ()

i. Sludge shall be disposed of in accordance with applicable regulations, as set forth in Section 540. ()

10. Solids Contact Clarifiers. Solids contact clarifiers are generally acceptable for combined softening and clarification where water characteristics, especially temperature, do not fluctuate rapidly, flow rates are uniform and operation is continuous. A minimum of two (2) units are required for surface water treatment as required in Subsection 520.01. ()

a. Chemicals shall be applied at such points and by such means as to ensure satisfactory mixing of the chemicals with the water. ()

b. Unless otherwise approved by the Department based on documentation provided by the design engineer, a rapid mix device or chamber ahead of the solids contact clarifier is required to assure proper mixing of the chemicals applied. Mixing devices employed shall be constructed so as to provide good mixing of the raw water with previously formed sludge particles and prevent deposition of solids in the mixing zone. ()

c. Flocculation equipment shall be adjustable as to speed, pitch, or a combination of speed and pitch and must provide for coagulation in a separate chamber or baffled zone within the unit. ()

d. Sludge removal design shall provide that sludge pipes are not less than three (3) inches in diameter and arranged so as to facilitate cleaning. Entrance to sludge withdrawal piping shall be designed to prevent clogging. Provision shall be made for the operator to observe and sample sludge being withdrawn from the unit. ()

e. Blow-off outlets and drains must terminate and discharge at places acceptable to the Department in regard to control of potential cross connections. Cross connection control must be included for the potable water lines used to backflush sludge lines. ()

f. The detention time shall be established on the basis of the raw water characteristics and other local conditions that affect the operation of the unit. The Department may request data to support decisions made with respect to detention times. The Department may alter detention time requirements. ()

g. Controls for sludge withdrawal which minimize water losses shall be provided. ()

h. Unless otherwise approved by the Department based on documentation provided by the design engineer, weirs shall be adjustable and at least equivalent in length to the perimeter of the tank. Weir loading shall not exceed ten (10) gallons per minute per foot of weir length for units used as clarifiers or twenty (20) gallons per minute per foot of weir length for units used for softening. Where orifices are used, the loading rates per foot of launder rates shall be equivalent to weir loadings. Either shall produce uniform rising rates over the entire area of the tank. ()

i. Upflow rates shall not exceed one (1) gallon per minute per square foot of area at the sludge separation line for units used as clarifiers or one and three-quarters (1.75) gallons per minute per foot of area at the slurry separation line for units used as softeners. The Department may consider higher rates if supporting data is provided. ()

11. Settler Units. Settler units consisting of variously shaped tubes or plates installed in multiple layers and at an angle to the flow may be used for sedimentation following flocculation. ()

a. Inlets and outlets shall be designed to maintain velocities suitable for settling in the basin and to minimize short-circuiting. Plate units shall be designed to minimize unequal distribution across the units. ()

b. Drain piping from the settler units must be sized to facilitate a quick flush of the settler units and to prevent flooding other portions of the plant. ()

c. Although most units will be located within a plant, outdoor installations must provide sufficient freeboard above the top of settlers to prevent freezing in the units. ()

d. Water shall be applied to tube settlers at a maximum rate of two (2) gallons per minute per square foot of cross-sectional area for tube settlers, unless higher rates are justified through pilot plant or in-plant demonstration studies. See Subsection 501.19 for general information on conducting pilot studies. ()

e. Water shall be applied to plate settlers at a maximum plate loading rate of one-half (0.5) gallons per minute per square foot, based on eighty (80) percent of the projected horizontal plate area. ()

f. Flushing lines shall be provided to facilitate maintenance and must be properly protected against backflow or back siphonage. ()

12. High Rate Clarification. High rate clarification processes may be approved upon demonstrating

satisfactory performance under on-site pilot plant conditions or documentation of full scale plant operation with similar raw water quality conditions. Reductions in detention times and/or increases in weir loading rates shall be justified. See Subsection 501.19 for general information on conducting pilot studies. Examples of such processes include dissolved air flotation, ballasted flocculation, contact flocculation/clarification, and helical upflow. ()

521. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT: FILTRATION USING RAPID RATE GRAVITY FILTERS.

01. Pretreatment. The use of rapid rate gravity filters shall require pretreatment in the form of coagulation, flocculation, and sedimentation. ()

02. Rate of Filtration. The filter rate must be proposed and justified by the design engineer to the satisfaction of the Department prior to the preparation of final plans and specifications. ()

03. Number of Units. A minimum of two (2) units for redundancy shall be provided for filtration such that plant design capacity can be maintained with any component out of service for maintenance or repairs. Where declining rate filtration is provided, the variable aspect of filtration rates, and the number of filters must be considered when determining the design capacity for the filters. ()

04. Structure and Hydraulics. The filter structure shall be designed to provide for: ()

- a. Vertical walls within the filter. There shall be no protrusion of the filter walls into the filter media. ()
- b. Cover by superstructure with sufficient headroom to permit normal inspection and operation. ()
- c. Minimum depth of filter box of eight and one-half (8.5) feet. ()
- d. Minimum water depth over the surface of the filter media of three (3) feet. ()
- e. Trapped effluent to prevent backflow of air to the bottom of the filters. ()
- f. Prevention of floor drainage to the filter with a minimum four (4) inch curb around the filters. ()
- g. Prevention of flooding by providing overflow. ()
- h. Maximum velocity of treated water entering the filters of two (2) feet per second. ()
- i. Cleanouts and straight alignment for influent pipes or conduits where solids loading is heavy, or following lime-soda softening. ()
- j. Washwater drain capacity to carry maximum flow. ()
- k. Walkways around filters to be not less than twenty-four (24) inches wide and equipped with safety handrails or walls. ()
- l. Construction so as to prevent cross connections and common walls between potable water and non-potable fluids. ()

05. Washwater Troughs. Washwater troughs shall be constructed to have: ()

- a. The bottom elevation above the maximum level of expanded media during washing. ()
- b. A two (2) inch freeboard at the maximum rate of wash. ()
- c. The top edge level and all at the same elevation. ()

- d. Spacing so that each trough serves the same number of square feet of filter area. ()
 - e. Maximum horizontal travel of suspended particles to reach the trough not to exceed three (3) feet. ()
- 06. Filter Material.** The media shall be clean silica sand or other natural or synthetic media free from detrimental chemical or bacterial contaminants, approved by the Department, and having the following characteristics: ()
- a. A total depth of not less than twenty-four (24) inches and generally not more than thirty (30) inches. ()
 - b. An effective size range of the smallest material no greater than forty-five hundredths (0.45) of a millimeter to fifty-five hundredths (0.55) of a millimeter. ()
 - c. A uniformity coefficient of the smallest material not greater than one and sixty-five hundredths (1.65). ()
 - d. A minimum of twelve (12) inches of media with an effective size range no greater than forty-five hundredths (0.45) of a millimeter to fifty-five hundredths (0.55) of a millimeter and a specific gravity greater than other filtering materials within the filter. ()
 - e. Types of filter media are as follows: ()
 - i. Clean, crushed anthracite or a combination of anthracite and other media may be considered on the basis of experimental data specific to the project. The anthracite shall have the following characteristics: ()
 - (1) Effective size of forty-five hundredths (0.45) of a millimeter to fifty-five hundredths (0.55) of a millimeter with uniformity coefficient not greater than sixty-five hundredths (1.65) when used alone. ()
 - (2) Effective size of eight tenths (0.8) of a millimeter to one and two-tenths (1.2) millimeters with a uniformity coefficient not greater than one and eighty-five hundredths (1.85) when used as a cap. ()
 - (3) Effective size for anthracite used as a single media on potable ground water for iron and manganese removal only shall be a maximum of eight tenths (0.8) of a millimeter (effective sizes greater than this may be approved based upon onsite pilot plant studies or other demonstration acceptable to the Department). See Subsection 501.19 for general information on conducting pilot studies. ()
 - ii. Sand media shall have the following characteristics: ()
 - (1) Effective size of forty-five hundredths (0.45) of a millimeter to fifty-five hundredths (0.55) of a millimeter. ()
 - (2) Uniformity coefficient of not greater than one and sixty-five hundredths (1.65). ()
 - (3) Larger size sand media may be allowed by the Department where full-scale tests have demonstrated that treatment goals can be met under all conditions. ()
 - iii. Granular activated carbon (GAC) as a single media may be considered for filtration only after pilot or full-scale testing and with prior approval of the Department. See Subsection 501.19 for general information on conducting pilot studies. The design shall include the following: ()
 - (1) The media must meet the basic specifications for filter media as given in Subsections 521.06.a. through d., except that larger size media may be allowed where full scale tests have demonstrated that treatment goals can be met under all conditions. ()

- (2) There must be a means for periodic treatment of filter material for control of bacterial and other growth. ()
- (3) Provisions must be made for frequent replacement or regeneration. ()
- iv. Other media will be considered based on experimental data and operating experience. ()
- v. A three (3) inch layer of torpedo sand shall be used as a supporting media for filter sand where supporting gravel is used, and shall have an effective size of eight-tenths (0.8) millimeters to two (2.0) millimeters, and a uniformity coefficient not greater than one and seven-tenths (1.7). ()

vi. Gravel, when used as the supporting media, shall consist of cleaned and washed, hard, durable, rounded silica particles and shall not include flat or elongated particles. The coarsest gravel shall be two and one-half (2.5) inches in size when the gravel rests directly on a lateral system and must extend above the top of the perforated laterals. Not less than four (4) layers of gravel shall be provided in accordance with the size and depth distribution specified in the table below. Reduction of gravel depths and other size gradations may be considered upon justification to the reviewing authority for slow sand filtration or when proprietary filter bottoms are specified.

Size of Gravel	Depth
2 ½ to 1 ½ inches	5 to 8 inches
1 ½ to ¾ inches	3 to 5 inches
¾ to ½ inches	3 to 5 inches
½ to 3/16 inches	2 to 3 inches
3/16 to 3/32 inches	2 to 3 inches

()

07. Filter Bottoms and Strainer Systems. Departure from the standards set out in Subsection 521.07 may be acceptable for high rate filters and for proprietary bottoms. Porous plate bottoms shall not be used where iron or manganese may clog them or with waters softened by lime. The design of manifold-type collection systems shall:

()

- a. Minimize loss of head in the manifold and laterals. ()
- b. Ensure even distribution of wash water and even rate of filtration over the entire area of the filter. ()
- c. Provide the ratio of the area of the final openings of the strainer systems to the area of the filter at about three-thousandths (0.003), ()
- d. Provide the total cross-sectional area of the laterals at about twice the total area of the final openings. ()
- e. Provide the cross-sectional area of the manifold at one and one-half (1.5) to two (2) times the total area of the laterals. ()
- f. Lateral perforations without strainers shall be directed downward. ()

08. Surface or Subsurface Wash. Surface or subsurface wash facilities are required except for filters used exclusively for iron or manganese removal, and may be accomplished by a system of fixed nozzles or a revolving-type apparatus. All devices shall be designed with:

()

- a. Provision for water pressures of at least forty-five (45) pounds per square inch. ()

b. A properly installed vacuum breaker or other approved device to prevent back siphonage if connected to the treated water system. ()

c. Rate of flow of two (2.0) gallons per minute per square foot of filter area with fixed nozzles or one-half (0.5) gallon per minute per square foot with revolving arms. ()

d. Air wash can be considered based on experimental data and operating experiences. ()

09. Air Scouring. Air scouring can be considered in place of surface wash provided the following conditions are met: ()

a. Air flow for air scouring the filter must be three (3) to five (5) standard cubic feet per minute square foot of filter area when the air is introduced in the underdrain; a lower air rate must be used when the air scour distribution system is placed above the underdrains. ()

b. A method for avoiding excessive loss of the filter media during backwashing must be provided. ()

c. Air scouring must be followed by a fluidization wash sufficient to re-stratify the media. ()

d. Air must be free from contamination. ()

e. Air scour distribution systems shall be placed below the media and supporting bed interface with the following exception: if placed at the interface the air scour nozzles shall be designed to prevent media from clogging the nozzles or entering the air distribution system. ()

f. Piping for the air distribution system shall not be flexible hose which will collapse when not under air pressure and shall not be a relatively soft material which may erode at the orifice opening with the passage of air at high velocity. ()

g. Air delivery piping shall not pass down through the filter media nor shall there be any arrangement in the filter design which would allow short circuiting between the applied unfiltered water and the filtered water. ()

h. The backwash water delivery system must be capable of fifteen (15) gallons per minute per square foot of filter surface area (37 m/hr); however, when air scour is provided the backwash water rate must be variable and should not exceed eight (8) gallons per minute per square foot (20 m/hr) unless operating experience shows that a higher rate is necessary to remove scoured particles from filter media surfaces. ()

i. The filter underdrains shall be designed to accommodate air scour piping when the piping is installed in the underdrain. ()

10. Filter Appurtenances. The following shall be provided for every filter: ()

a. Influent and effluent sampling taps. ()

b. A gauge capable of indicating loss of head. ()

c. A meter indicating rate-of flow. A modified rate controller which limits the rate of filtration to a maximum rate may be used. However, equipment that simply maintains a constant water level on the filters is not acceptable, unless the rate of flow onto the filter is properly controlled. A pump or a flow meter in each filter effluent line may be used as the limiting device for the rate of filtration only if approved by the Department on a site-specific basis. ()

11. Backwash. Provisions shall be made for washing filters as follows: ()

- a. A minimum backwash rate such that a fifty (50) percent expansion of the filter bed is achieved. ()
 - b. Filtered water provided at the required rate by wash water tanks, a wash water pump, from the high service main, or a combination of these. ()
 - c. Wash water pumps in duplicate unless an alternate means of obtaining wash water is available. ()
 - d. Not less than fifteen (15) minutes wash of one filter at the design rate of wash. ()
 - e. A wash water regulator or valve on the main wash water line to obtain the desired rate of filter wash with the wash water valves on the individual filters open wide. ()
 - f. A rate-of-flow indicator, preferably with a totalizer, on the main wash water line, located so that it can be easily read by the operator during the washing process. ()
 - g. Design to prevent rapid changes in backwash water flow. Backwash shall be operator initiated. Automated systems shall be operator adjustable. ()
- 12. Roof Drainage.** Roof drains shall not discharge into the filters or basins and conduits preceding the filters. ()

522. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT: FILTRATION USING DIATOMACEOUS EARTH.

The use of these filters may be considered for application to surface waters with low turbidity and low bacterial contamination, and may be used for iron removal for ground waters providing the removal is effective and the water is of satisfactory sanitary quality before treatment. ()

01. Conditions of Use. Diatomaceous earth filters are expressly excluded from consideration for the following conditions: ()

- a. Bacteria removal; ()
- b. Color removal; ()
- c. Turbidity removal where either the gross quantity of turbidity is high or the turbidity exhibits poor filterability characteristics; or ()
- d. Filtration of waters with high algae counts. ()

02. Treated Water Storage. Treated water storage capacity in excess of normal requirements shall be provided to allow operation of the filters at a uniform rate during all conditions of system demand at or below the approved filtration rate, and guarantee continuity of service during adverse raw water conditions without by-passing the system. ()

03. Number of Units. A minimum of two (2) units for redundancy shall be provided for filtration such that plant design capacity can be maintained with any component out of service for maintenance or repairs. ()

04. Precoat. A uniform precoat shall be applied hydraulically to each septum by introducing a slurry to the tank influent line and employing a filter-to-waste recirculation system. ()

05. Body Feed. A body feed system to apply additional amounts of diatomaceous earth slurry during the filter run is required to avoid short filter runs or excessive head losses. ()

- a. The rate of body feed is dependent on raw water quality and characteristics and must be determined in the pilot plant study. See Subsection 501.19 for general information on conducting pilot studies. ()

- b. Continuous mixing of the body feed slurry is required. ()
- 06. Filtration Requirements.** ()
 - a. Rate of filtration shall be controlled by a positive means. ()
 - b. Head loss shall not exceed thirty (30) psi for pressure diatomaceous earth filters, or a vacuum of fifteen (15) inches of mercury for a vacuum system. ()
 - c. A recirculation or holding pump shall be employed to maintain differential pressure across the filter when the unit is not in operation in order to prevent the filter cake from dropping off the filter elements. A minimum recirculation rate of one-tenth (0.1) gallon per minute per square foot of filter area shall be provided. ()
 - d. The septum or filter elements shall be structurally capable of withstanding maximum pressure and velocity variations during filtration and backwash cycles, and shall be spaced such that no less than one (1) inch is provided between elements or between any element and a wall. ()
 - e. The filter influent shall be designed to prevent scour of the diatomaceous earth from the filter element. ()
- 07. Backwash.** A satisfactory method to thoroughly remove and dispose of spent filter cake shall be provided. ()
- 08. Appurtenances.** The following shall be provided for every filter: ()
 - a. Sampling taps for raw and filtered water. ()
 - b. Loss of head or differential pressure gauge. ()
 - c. Rate-of-flow indicator. ()
 - d. A throttling valve used to reduce rates below normal during adverse raw water conditions. ()
 - e. Evaluation of the need for body feed, recirculation, and any other pumps. ()
 - f. Provisions for filtering to waste with appropriate measures for backflow prevention. ()
- 09. Monitoring.** A continuous monitoring turbidimeter with recorder is required on each filter effluent for plants treating surface water. ()

523. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT: SLOW SAND FILTRATION.

The use of these filters shall require prior engineering studies to demonstrate the adequacy and suitability of this method of filtration for the specific water supply. Slow Sand Filtration and Diatomaceous Earth Filtration for Small Water Systems, Manual on Slow Sand Filtration, and Slow Sand Filtration referenced in Subsection 002.02, may be used as guidance in design of slow sand filtration facilities. ()

01. Quality of Raw Water. Slow rate gravity filtration shall be limited to waters having maximum turbidities of ten (10) nephelometric units and maximum color of fifteen (15) units; such turbidity must not be attributable to colloidal clay. Raw water quality data must include examinations for algae. For source water having variable turbidity, the potential use of a roughing filter or other pretreatment technology should be evaluated. The Department may allow the use of a pretreatment technology on raw waters that exceed the normal limits for turbidity and color, if it can be demonstrated to the Department's satisfaction that pretreatment will enable slow sand filtration to properly operate and comply with these Rules. ()

02. Number of Units. A minimum of two (2) units for redundancy shall be provided for filtration such that plant design capacity can be maintained with any component out of service for maintenance or repairs. The

Department may allow a single bed filter if it can be demonstrated to the Department's satisfaction that an alternative water source is available such that the water system can provide plant design capacity with the filter taken out of service for maintenance and repairs. ()

03. Structural Details and Hydraulics. Slow rate gravity filters shall be so designed as to provide a cover, unless otherwise approved by the Department based on documentation provided by the design engineer, headroom to permit normal movement by operating personnel for scraping and sand removal operations, adequate access hatches and access ports for handling of sand and for ventilation, filtration to waste, an overflow at the maximum filter water level, and protection from freezing. A permanent means of determining sand depth shall be provided. ()

04. Underdrains. Each filter unit shall be equipped with a main drain and an adequate number of lateral underdrains to collect the filtered water. The underdrains shall be so spaced that the maximum velocity of the water flow in the underdrain will not exceed three-fourths (0.75) feet per second. The maximum spacing of laterals shall not exceed three (3) feet if pipe laterals are used. ()

05. Filter Material. The following requirements apply: ()

a. A minimum depth of thirty (30) inches of filter sand shall be placed on graded gravel layers. ()

b. The effective size shall be between fifteen hundredths (0.15) of a millimeter and thirty-five hundredths (0.35) of a millimeter. Larger sizes may be considered by the Department based on the results of a pilot study. See Subsection 501.19 for general information on conducting pilot studies. ()

c. The uniformity coefficient shall not exceed three point zero (3.0). ()

d. The sand shall be cleaned and washed free from foreign matter. ()

e. The sand shall be rebedded to the original minimum depth of thirty (30) inches when scraping has reduced the bed depth to no less than twenty-four (24) inches. Where sand is to be reused in order to provide biological seeding and shortening of the ripening process, rebedding shall utilize a "throw over" technique whereby new sand is placed on the support gravel and existing sand is replaced on top of the new sand. The maximum filtration rate shall not exceed zero point one (0.1) gallon per minute per square foot for each individual bed. ()

06. Filter Sand Support. ()

a. A three (3)-inch layer of sand shall be used as a supporting media for filter sand. The supporting sand shall have an effective size of zero point eight (0.8) millimeters to two point zero (2.0) millimeters and a uniformity coefficient not greater than one point seven (1.7). ()

b. Gravel shall consist of cleaned and washed, hard, durable, rounded rock particles and shall not include flat or elongated particles. The coarsest gravel shall be two and one-half (2.5) inches in size when the gravel rests directly on a lateral system and must extend above the top of the perforated laterals. Not less than four (4) layers of gravel shall be provided in accordance with the size and depth distribution specified in the table below. Reduction of gravel depths and other size gradations may be considered upon justification to the Department.

Size of Gravel	Depth
2 1/2 to 1 1/2 inches	5 to 8 inches
1 1/2 to 3/4 inches	3 to 5 inches
3/4 to 1/2 inches	3 to 5 inches
1/2 to 3/16 inches	2 to 3 inches
3/16 to 3/32 inches	2 to 3 inches

()

07. Depth of Water Over Filter Beds. The design shall provide a depth of at least three (3) to six (6) feet of water over the sand. Influent water shall not scour the sand surface. ()

08. Control Appurtenances. Each filter shall be equipped with a loss of head gauge, an orifice, Venturi meter, or other suitable means of discharge measurement installed on each filter to control the rate of filtration, and an effluent pipe designed to maintain the water level above the top of the filter sand. The effluent piping must not be directly interconnected with the other filter beds. A sample tap shall be provided for each filter bed. ()

09. Ripening. Slow sand filters must be filtered-to-waste until they are biologically mature before being put into service following construction, scraping, re-sanding, or reopening after extended shutdown. The period of filter-to-waste shall be as follows: ()

a. Filters shall be filtered-to-waste after scraping or cleaning until the effluent turbidity falls consistently below the pre-cleaning level, unless otherwise approved by the Department based on documentation provided by the design engineer. ()

b. Filters shall be filtered-to-waste following construction, re-sanding, or extended shutdown based on project specific protocols that have been approved by the Department and then incorporated into a Department approved operation and maintenance manual. These protocols may be based on factors from standard literature such as those listed in Subsection 002.02 but typically include factors such as minimum filter-to-waste time periods, bacteriological testing, and effluent turbidity. Sampling results from the filter-to-waste period shall be provided to the Department for review and the Department must provide authorization prior to restarting service to the public. ()

10. Supernatant Drain Required. Filter beds shall be equipped with a supernatant drain to allow for quick removal of water standing over sand that has become impermeable because it requires scraping or rebedding. ()

11. Filter Bed Control and Minimum Rate of Flow. Each filter bed shall be controlled separately and filters must be operated at a constant filtration rate with any changes made gradually. The minimum rate of filtration shall be at least two hundredths (0.02) gallons per minute per square foot. ()

524. FACILITY AND DESIGN STANDARDS: SURFACE WATER TREATMENT: DIRECT FILTRATION.

Direct filtration, as used herein, refers to the filtration of a surface water following chemical coagulation and possibly flocculation but without prior settling. The nature of the treatment process will depend upon the raw water quality. A full scale direct filtration plant shall not be constructed without prior pilot studies which are acceptable to the reviewing authority. In-plant demonstration studies are required where conventional treatment plants are converted to direct filtration. Where direct filtration is proposed, an engineering report shall be submitted prior to conducting pilot plant or in-plant demonstration studies. See Subsection 501.19 for general information on conducting pilot studies. ()

01. Filtration Requirements. ()

a. Filters shall be rapid rate gravity filters with dual or mixed media. The final filter design shall be based on the pilot plant or in-plant demonstration studies, and all portions of Section 518 apply. Pressure filters or single media sand filters shall not be used. ()

b. A continuous recording turbidimeter shall be installed on each filter effluent line and on the composite filter effluent line. ()

c. Additional continuous monitoring equipment such as particle counting or streaming current metering to assist in control of coagulant dose may be required by the reviewing authority. ()

02. Siting Requirements. The plant design and land ownership surrounding the plant shall allow for modifications of the plant. ()

03. Redundancy. A minimum of two (2) units shall be provided for filtration such that plant capacity can be maintained with any component out of service for maintenance or repairs. ()

525. FACILITY AND DESIGN STANDARDS: LOW PRESSURE MEMBRANE FILTRATION.

Low pressure filtration, as used herein, refers to microfiltration or ultrafiltration processes. Low pressure membrane systems can provide greater than 3-log removal of *Giardia lamblia* and *Cryptosporidium*, and ultrafiltration systems can also provide up to 2-log virus removal. The Department will determine maximum available removal credits for the specific membrane under consideration. The actual log removal credit that a low pressure membrane filtration system will receive is the lower of the values determined by the following: the removal efficiency demonstrated during challenge testing, or the maximum log removal that can be verified by direct integrity testing required during the course of normal operation. Membrane systems shall contain sufficient design to allow for offline direct integrity testing of all units or modules at the required interval while retaining the capability to supply maximum day demand to the water system. Membrane systems shall have at least two (2) units unless it can be demonstrated to the satisfaction of the Department that a secondary source or treatment component can supply the required minimum plant design capacity. ()

01. Membrane Selection and Design Considerations. ()

a. Challenge Testing. Challenge testing involves seeding feed water with an organism or particulate and measuring the log reduction of the organism or particulate between the feed and filtrate. It is a one-time product-specific test event performed by an approved third party designed to demonstrate the removal ability of the membrane. Challenge testing shall be conducted by the third party entity in general conformance with the USEPA Membrane Filtration Guidance Manual referenced in Subsection 002.02 (Membrane Filtration Guidance Manual). The challenge test report shall be submitted to the Department along with the preliminary engineering report for the project. The Department may accept another state's challenge test report approval. ()

b. Water Quality Considerations for Design. A review of historical source water data shall be conducted to determine the degree of pretreatment needed if any, the feasibility of membrane filtration, and an estimated cost of the system. At a minimum, the following parameters shall be investigated: Seasonal temperature and turbidity profiles, total organic loading, occurrence of algae, microbial activity, iron, manganese, and hardness levels, and any other inorganic or physical parameters determined to be necessary by the Department. The data shall be used to determine anticipated fouling and scaling, backwash and cleaning cycles and regimens, acceptable trans-membrane pressure differentials, and design flux, especially during lowest anticipated water temperature. ()

c. Pilot Study. A pilot study shall be conducted for a period that shall be determined by the design engineer and approved by the Department. The duration should include the season of lowest water temperatures and the season including the highest anticipated turbidity, algal bloom, TOC, and iron/manganese event or otherwise cover four seasons of source water quality conditions. The Department may approve a shorter duration proof pilot to verify design criteria that affect the reliable production capacity of the membrane system. The Department may approve the use of a full scale pilot study where the full scale facility will act as the pilot study. The Department may also waive the pilot study requirement. Proof pilot studies, full scale pilot studies, and the waiving of the pilot study requirement will only be approved in circumstances where source water conditions and fouling characteristics are already well understood. Such source waters include but are not limited to ground water under the influence of surface water, waters with existing membrane plants, waters where sufficient pilot test data has already been generated, and extensively used or tested membrane products where production or test data on similar waters is available (i.e., same lake, reservoir, or same reach for stream sources). In addition to the requirements in Subsection 501.19, the pilot study shall include: ()

- i. A means to identify the best membrane to use for the anticipated water quality; ()
- ii. Analysis of any need for pretreatment; ()
- iii. Range of anticipated flux rates; ()

- iv. Operating and transmembrane pressure; ()
 - v. Fouling and scaling potential; ()
 - vi. Backwash and recovery cleaning, cleaning processes, and intervals; ()
 - vii. Efficiency and process mass balance; ()
 - viii. Waste stream volume, characterization, and disposal method; ()
 - ix. Turbidity; and ()
 - x. Integrity testing results and procedures. ()
- 02. Monitoring and Compliance Requirements for Membranes.** Public drinking water systems that use low pressure membrane filtration must comply with the following requirements. ()
- a. Initial Start-Up.** ()
 - i. The Department shall be notified at least one (1) week in advance of the planned start-up date. ()
 - ii. The design engineer shall oversee start-up procedures. ()
 - iii. All monitoring equipment shall be calibrated prior to start-up. ()
 - iv. The system shall pass direct integrity testing prior to going on-line and producing water for distribution. ()
 - v. A method for the disposal of start-up water shall be approved by the Department prior to start-up. ()
 - b. Direct Integrity Testing.** ()
 - i. Scale of Testing. Testing must be conducted on each membrane skid in service at least daily for the first year of operation. ()
 - ii. Resolution. The test method used must have a resolution of three (3) μm or less for *Cryptosporidium* and *Giardia lamblia* removal credit. ()
 - iii. Sensitivity. The test method used must have sensitivity sufficient to verify the ability of the membrane filtration system to remove the constituent at a level commensurate with the credit awarded by the Department. ()
 - (1) Formulae for sensitivity calculation for pressure-based tests are available in the Membrane Filtration Guidance Manual referenced in Subsection 002.02. The volumetric concentration factor used in the calculation may be either calculated or determined experimentally. ()
 - (2) Formulae for sensitivity calculation for marker-based tests are available in the Membrane Filtration Guidance Manual referenced in Subsection 002.02. ()
 - iv. Control Limit. A control limit must be established within the sensitivity limits of the direct integrity test that is indicative of an integral membrane unit capable of achieving the log removal credit awarded by the Department. ()
 - (1) If the direct integrity test results exceed the control limit for any membrane unit, that unit must be removed from service. ()

(2) Any unit taken out of service for exceeding a direct integrity test control limit cannot be returned to service until repairs are confirmed by subsequent direct integrity test results that are within the control limit. ()

v. Frequency. Direct integrity testing must be conducted on each membrane unit at a frequency of at least once per day that the unit is in operation. The Department may extend testing frequency up to a duration of once per week after one (1) year of daily testing showing a less than five percent (5%) testing failure rate for the previous year. During weekly testing, if at any time the system fails more than two (2) direct integrity tests within a three (3) month period, the system shall return to daily testing. ()

c. Indirect Integrity Monitoring. ()

i. Scale of Testing. Testing must be conducted on each membrane unit in service. ()

ii. Monitoring Method. Continuous indirect integrity monitoring must be conducted using turbidity monitoring unless the Department approves an alternative method. ()

iii. Frequency. Continuous indirect integrity monitoring must be conducted at a frequency of at least one (1) reading every fifteen (15) minutes. The Department may allow a time delay in reporting compliance turbidity measurements if it can be demonstrated that elevated turbidity readings above fifteen hundredths (0.15) NTU immediately following direct integrity testing or maintenance are the result of factors related to entrained air or membrane wettability and are not related to membrane integrity. ()

iv. Control Limit. If the continuous indirect integrity monitoring results exceed the specified control limit for any membrane unit for a period greater than fifteen (15) minutes (i.e., two (2) consecutive readings at fifteen (15) minute intervals), direct integrity testing must be immediately conducted on that unit. ()

(1) The control limit for turbidity monitoring is fifteen hundredths (0.15) NTU. ()

(2) Control limits for Department approved alternative methods shall be established by the Department. ()

d. Operations Plan. A project specific operation and maintenance manual shall be provided as required in Subsection 501.12. See definition of Operation and Maintenance Manual in Section 003 for the typical contents of an operation and maintenance manual and the included operations plan. The operations plan in the operation and maintenance manual for membrane systems shall include, but is not limited to the following information: ()

i. Filtration: ()

(1) Control of feed flow to the membrane system; ()

(2) Measurement of inlet/outlet pressures and filtrate flows; ()

(3) Measurement of transmembrane pressure changes during filter run; and ()

(4) Feed flow control in response to temperature changes. ()

ii. Membrane backwashing: ()

(1) Programming automated frequency; ()

(2) Proper backwash venting and disposal; see Section 540; ()

(3) Appropriate backwash rate; and ()

(4) Monitoring during return of filter to service. ()

- iii. Chemical cleaning: ()
 - (1) Selection of proper chemical washing sequence; ()
 - (2) Proper procedures for dilution of chemicals; ()
 - (3) Monitoring of pH through chemical cleaning cycle; ()
 - (4) Rinsing of membrane system following chemical clean; and ()
 - (5) Return of filter to service. ()
- iv. Chemical feeders (in the case that chemical pretreatment is applied): ()
 - (1) Calibration check; ()
 - (2) Settings and adjustments (how they should be made); and ()
 - (3) Dilution of chemicals and polymers (proper procedures). ()
- v. Monitoring and observing operation: ()
 - (1) Observation of feed water or pretreated water turbidity; ()
 - (2) Observation of trans-membrane pressure increase between backwashes; ()
 - (3) Filtered water turbidity; ()
 - (4) Procedures to follow if turbidity breakthrough occurs. ()
- vi. Troubleshooting. A troubleshooting checklist or guide shall be included. Suggested troubleshooting items include but are not limited to the following: ()
 - (1) No raw water (feed water) flow to plant; ()
 - (2) Can't control rate of flow of water through equipment; ()
 - (3) Valving configuration for direct flow and cross-flow operation modes; ()
 - (4) Poor raw water quality (raw water quality falls outside the performance range of the equipment); ()
 - (5) Poor filtrate quality; ()
 - (6) Failed membrane integrity test; ()
 - (7) Low pump feed pressure; ()
 - (8) Automatic operation (if provided) not functioning; ()
 - (9) Filtered water turbidity too high; ()
 - (10) Head loss builds up excessively rapidly; ()
 - (11) Reduced flux; ()

- (12) Machine will not start and “Power On” indicator off; ()
- (13) Machine will not start and “Power On” indicator on; ()
- (14) Pump cavitation; ()
- (15) Valve stuck or won’t operate; and ()
- (16) No electric power. ()

e. Reporting. The sensitivity, resolution, and frequency of the direct integrity test proposed for use with the full-scale facility must be reported to the Department prior to initial operation. The following shall be reported to the Department on a monthly basis: ()

i. Any direct integrity test results exceeding the control limit, as well as the corrective action taken in response, must be reported to the Department within ten (10) days of the end of the monthly monitoring cycle on a Department reporting form. The form is available at www.deq.idaho.gov; ()

ii. Any continuous indirect integrity monitoring results triggering direct integrity testing, as well as any corrective action taken in response, must be reported to the Department within ten (10) days of the end of the monthly monitoring cycle on a Department reporting form. The form is available at www.deq.idaho.gov; ()

iii. Any additional information considered necessary by the Department on a case-specific basis to verify proper operation and maintenance of the membrane filtration process; and ()

iv. All direct integrity test results and continuous indirect integrity monitoring results must be retained for a minimum of three (3) years. ()

526. -- 528. (RESERVED)

529. FACILITY AND DESIGN STANDARDS: DISINFECTION OF DRINKING WATER, ULTRAVIOLET LIGHT.

01. General. ()

a. Ultraviolet (UV) light technology is a primary disinfectant typically used for Cryptosporidium, Giardia lamblia, and virus inactivation of both surface water and ground water supplies. Reactor performance in terms of inactivation of any particular organism is a function of the delivered dose which is determined by validation testing. ()

b. UV disinfection credit will be awarded for filtered systems and unfiltered systems if the system meets the requirements for unfiltered systems in 40 CFR 141.71. Systems will receive Cryptosporidium, Giardia lamblia, and virus treatment credits by achieving the corresponding UV dose values for the appropriate target pathogen and log reduction shown in Subsection 529.03, calculated to take into account the validation factor and reduction equivalent dose. The target pathogen and the target log inactivation shall be used to identify the corresponding required UV dose. ()

c. For water systems using UV light to meet microbial treatment requirements, at least ninety-five percent (95%) of the water delivered to the public every month must be treated by UV reactors operating within validated conditions for the required UV dose. ()

d. When reviewing proposed UV disinfection projects, the Department will use the USEPA UV Disinfection Guidance Manual for the Final Long Term 2 Enhanced Surface Water Treatment Rule referenced in Subsection 002.02 (UV Disinfection Guidance Manual) for guidance. ()

02. Pilot Studies and Validation. ()

a. The Department may allow on-site pilot studies on a case by case basis. Pilot studies are usually used to determine how much fouling occurs on site, to evaluate UV system reliability (e.g. UV sensors, UV transmittance (UVT) monitors, ballast reliability) and to provide operators experience running a UV system. They may also be used to assess lamp aging or impacts of power quality. See Subsection 501.19 for general information on conducting pilot studies. ()

b. Validation testing determines the operating conditions and monitoring algorithms that the UV system will use to define how much UV dose is being delivered by the reactor during operation. The validated dose as determined through validation testing is compared to the required dose in the UV Dose Table (Subsection 529.03) to determine inactivation credit. The validated dose is calculated by dividing the determined reduction equivalent dose by a validation factor to account for biases and experimental uncertainty. UV light treatment reactors shall be validated by a third party entity approved by the Department. At a minimum, validation testing must account for the following: UV absorbance of the water; lamp fouling and aging; measurement uncertainty of on-line UV sensors; UV dose distributions arising from the velocity profiles through the reactor; failure of UV lamps and other critical system components; inlet and outlet piping configuration of the UV reactor; lamp and UV sensor locations; and other parameters required by the Department. The Department may allow alternative test microbes such as MS2 phage where the UV dose response better matches that of Cryptosporidium and Giardia lamblia to provide more accurate and efficient UV dose monitoring. Additional guidance is available in the UV Disinfection Guidance Manual, referenced in Subsection 002.02, or another validation standard as approved by the Department. ()

c. Validation testing shall be conducted on full scale testing of a reactor that conforms uniformly to the UV reactors used by the system and inactivation of a test microorganism whose dose response characteristics have been quantified with a low pressure mercury vapor lamp. ()

d. Validation testing must determine and establish validated operating conditions under which the reactor delivers the required UV dose in Subsection 529.03. Validated operating conditions include: ()

- i. Flow rate; ()
 - ii. UV Intensity as measured by a UV sensor; ()
 - iii. UV lamp operating status. ()
- e.** The department may approve an alternative approach to validation testing. ()

03. UV Dose Table. The treatment credits listed in the dose table are based on UV light at a wavelength of two hundred fifty-four (254) nm as produced by a low pressure mercury vapor lamp. To receive treatment credit for other lamp types, the system shall demonstrate an equivalent germicidal dose through validation testing.

UV Dose Table (millijoules per square centimeter)			
Log	Cryptosporidium	Giardia lamblia	Virus
0.5	1.6	1.5	39
1.0	2.5	2.1	58
1.5	3.9	3.0	79
2.0	5.8	5.2	100
2.5	8.5	7.7	121
3.0	12	11	143
3.5	15	15	163
4.0	22	22	186

()

04. Reactor Design. Inlet and outlet conditions shall ensure that UV dose delivery at the plant is equal to or exceeds that utilized during validation. At a minimum, design criteria shall address target pathogen(s), required log inactivation and UV dose, flow rate, UVT, and lamp aging and fouling factors. UVT and flow rate shall be selected to account for seasonal changes in UVT. Lamp aging and fouling factors shall be supported by documentation or pilot study data. Recommended approaches of the UV Disinfection Guidance Manual, referenced in Subsection 002.02, shall be used in meeting this requirement. ()

a. The reactor systems must be designed to monitor and record parameters to verify the operation within the validated operating conditions approved by the Department. The system must be equipped with facilities to monitor and record UV intensity as measured by a UV sensor, flow rate, lamp status, UVT, and other parameters designated by the Department. ()

b. The ultraviolet treatment device shall be designed to provide a UV light dose equal to or greater than that specified in the UV Dose Table for the required log reduction. The UV Disinfection Guidance Manual, referenced in Subsection 002.02, shall be utilized in evaluating the appropriate dose required for the target microbe. The reactor shall also deliver the target dose while operating within the validated operating conditions for that particular unit. ()

c. The ultraviolet treatment assemblies shall be designed to allow for cleaning and replacement of the lamp, lamp sleeves, and sensor window or lens. ()

d. All ultraviolet treatment device designs shall evaluate lamp fouling and aging issues and manufacturer's recommendations regarding fouling, aging, and replacement shall be discussed in the Operation and Maintenance Manual. ()

e. For in-situ cleaning of the lamp sleeve, the design shall protect the potable water from cleaning solutions. ()

f. When off-line chemical cleaning systems are used, the UV enclosure shall be removed from service, drained, flushed with an NSF/ANSI Standard 60 certified solution, drained, and rinsed before being placed back in service. ()

g. On-line systems that use wipers or brushes may use chemical solutions provided they are NSF/ANSI Standard 60 certified. ()

h. An automatic shutdown valve shall be installed in the water supply line from the ultraviolet treatment device such that if power is not provided to the reactor or valve, the valve shall be in the closed position. ()

i. The design of the inlet and outlet piping configuration and the locations of expansions, bends, tees and valves shall assure that the UV dose delivery is equal to or greater than the required UV dose. Approach length prior to each reactor included in the credited dose calculations, downstream length following each reactor, and locations of any cleaning device/mechanism shall be based on validation testing. ()

j. For parallel trains, the flow to each reactor shall be equally distributed and metered or otherwise account for uneven flows in the design to ensure that the required UV dose is delivered to each train under varying flow conditions. ()

k. Valves shall be provided to allow isolating and removing from service each UV reactor. ()

l. Reactors shall be provided with air relief and pressure control valves per manufacturer requirements. ()

m. UVT analyzers shall be provided if UVT is part of the dose monitoring strategy. It is recommended that UVT be monitored on a regular basis for all systems to assess UVT variability. ()

n. A single train with a standby reactor or a sufficient number of parallel ultraviolet treatment devices shall be installed to ensure that adequate disinfection is provided when one unit is out of service. The Department may approve an alternate method that provides adequate disinfection such as standby chlorination. Any system that produces water on an irregular schedule may provide documentation for the Department's review and approval that a single reactor would be an acceptable design by demonstrating there would be adequate for time for maintenance and cleaning during operation shutdowns. ()

o. No bypass of the ultraviolet treatment process may be installed unless an alternate method of providing adequate disinfection is provided. ()

05. Controls. ()

a. A delay mechanism shall be installed to provide sufficient lamp warm-up prior to allowing water to flow from the ultraviolet treatment unit. ()

b. An automatic shutdown shall be designed to activate the shutdown valve in cases where the ultraviolet light dose falls below the approved design dose or outside of the validated specifications. ()

06. Reliability. The system must be capable of producing the plant design capacity at all times. ()

a. Standby equipment. Unless otherwise approved by the Department based on documentation provided by the design engineer and in accordance with Subsection 529.04.n., a minimum of two (2) reactors is required to maintain disinfection when one unit is taken out of service. Each reactor must be sized to deliver the required UV dose under the operating conditions of flow and UVT that occur at the plant. The conditions shall fall within the validated range of the reactor as determined during validation testing. ()

b. Power supply. The quality and reliability of the power supply shall be analyzed and back-up power supplies shall be discussed in the contingency plan. ()

c. Validated operating conditions. If UVT is above the validated range of UVT, the UV dose monitoring algorithm shall default to the maximum of the validated range. If UVT is below the validated range, the UV system operation shall be recorded as outside of the validated operating conditions. When UVT falls outside of ranges identified in the validated operating conditions, the contingency plan shall be enacted if UVT is part of the dose monitoring strategy. ()

d. Contingency plan. A contingency plan for total UV disinfection failure, loss of power, or in the event that water quality changes produce water quality unsuitable for UV disinfection shall be described in the preliminary engineering report. ()

07. Monitoring. Water systems using UV light must monitor for the parameters necessary to demonstrate operation within the validated conditions of the required UV dose. PWSs must check the calibration of UV sensors and online UVT monitors and recalibrate in accordance with a protocol approved by the Department. At a minimum, the following parameters must be monitored: ()

a. Flow rate. If the flow rate is below the validated range, then the UV dose monitoring algorithm shall default to the validated range. If the flow rate is above the validated range, then the UV system operation shall be recorded as outside of the validated operating conditions; ()

b. UV intensity as measured by UV sensors; ()

c. UVT if UVT is part of the dose monitoring strategy; and ()

d. Lamp status. ()

08. Alarms. The settings or predetermined set points for the alarms shall be specified in the

preliminary engineering report. The report shall also specify the alarms that shall activate the contingency plan response. At a minimum, the following alarms are required: ()

- a. Low UV intensity; ()
- b. High turbidity if required by the Department; ()
- c. Low UVT; ()
- d. Low UV dose; ()
- e. Lamp failure; ()
- f. UVT monitor failure; ()
- g. UV sensor failure; ()
- h. Low water level; and ()
- i. High flow rate. ()

09. Initial Startup. The following items shall be tested and verified before UV disinfected water is distributed: ()

- a. Electrical components; ()
- b. Water level; ()
- c. Flow split between reactor trains if applicable; ()
- d. Controls and alarms; and ()
- e. Instrument calibration. ()

10. Operation and Maintenance Manual. A project specific operation and maintenance manual shall be provided as required in Subsection 501.12. See definition of Operation and Maintenance Manual in Section 003 for the typical contents of an operation and maintenance manual and the included operations plan. The operations plan in the operation and maintenance manual shall include, but is not limited to the following information: ()

- a. Lamp aging and replacement intervals. Lamp replacement intervals may be based on the degree of lamp aging as indicated by the UV sensors; ()
- b. Lamp fouling analysis and cleaning procedures; ()
- c. Lamp replacement; and ()
- d. Lamp breakage. ()

530. FACILITY AND DESIGN STANDARDS: DISINFECTION OF DRINKING WATER, DISINFECTING AGENTS.

Disinfection may be accomplished with gas and liquid chlorine, calcium or sodium hypochlorites, chlorine dioxide, ozone, or ultraviolet light. Other disinfecting agents will be considered, providing reliable application equipment is available and testing procedures for a residual are recognized in "Standard Methods for the Examination of Water and Wastewater," referenced in Subsection 002.02, or an equivalent means of measuring effectiveness exists. The required amount of primary disinfection needed shall be specified by the Department. Consideration must be given to the formation of disinfection by-products (DBP) when selecting the disinfectant. See Section 531, Facility Design Standards - Design Standards for Chemical Application. For public water systems using only ground water and that voluntarily chlorinate, see Subsection 552.04. ()

- 01. Chlorination.** ()
- a.** In addition to the requirements of Section 531, chlorination equipment shall meet the following requirements: ()
- i.** Solution-feed gas chlorinators or hypochlorite feeders of the positive displacement type must be provided. ()
 - ii.** Standby or backup equipment of sufficient capacity shall be available to replace the largest unit. Spare parts shall be on hand to replace parts subject to wear and breakage. ()
 - iii.** Automatic proportioning chlorinators are required where the rate of flow or chlorine demand is not reasonably constant. ()
 - iv.** Each eductor (submerged jet pump) must be selected for the point of application with particular attention given to the quantity of chlorine to be added, the maximum injector waterflow, the total discharge back pressure, the injector operating pressure, and the size of the chlorine solution line. ()
 - v.** The chlorine solution injector/diffuser must be compatible with the point of application to provide a rapid and thorough mix with all the water being treated. ()
 - vi.** Automatic switch-over of chlorination treatment units shall be provided, where necessary, to assure continuous disinfection. ()
- b.** Effective contact time and point of application requirements are as follows: ()
- i.** Effective contact time sufficient to achieve the inactivation of target pathogens under the expected range of raw water pH and temperature variation must be demonstrated through tracer studies or other evaluations or calculations acceptable to the Department. Improving Clearwell Design for CT Compliance, referenced in Section 002.02, contains information that may be used as guidance for these calculations. Additional baffling can be added to new or existing basins to minimize short circuiting and increase contact time. ()
 - ii.** At least two (2) contactors shall be provided which are each capable of providing the required effective contact time at one-half (1/2) of the plant design capacity. Alternatively, a single contactor that can provide effective contact time at plant design capacity may be designed with separate sections and bypass piping to allow sections to be cleaned or maintained individually during low flow conditions. Any system that produces water on an irregular schedule may provide documentation for the Department's review and approval that a single contactor would be an acceptable design by demonstrating there would be adequate time for maintenance and cleaning during operation shutdowns. ()
 - iii.** At plants treating surface water, except slow sand filtration systems: ()
 - (1) Unless otherwise approved by the Department, in addition to the injection point prior to the disinfection contact tank, injection points shall also be provided for applying the disinfectant to the raw water, settled water, and water entering the distribution system. ()
 - (2) Unless otherwise approved by the Department, chemical piping or tubing shall be installed from the disinfectant feed system to each injection system during the initial construction. ()
 - iv.** For pipeline contactors, provision shall be made to drain accumulated sediment from the bottom of the contactor if the discharge from the contactor is not located at the bottom. ()
- c.** Chlorine residual test equipment recognized in the "Standard Methods for the Examination of Water and Wastewater," referenced in Subsection 002.02, shall be provided for use by the operator. All surface water treatment plants that serve a population greater than three thousand three hundred (3,300) must have equipment to measure chlorine residuals continuously entering the distribution system. A sample tap shall be provided to measure

chlorine residual and shall be located at a point after receiving the required contact time and at or prior to the first service connection. ()

d. Chlorinator piping requirements: ()

i. Cross connection protection: The chlorinator water supply piping shall be designed to prevent contamination of the treated water supply by sources of questionable quality. At all facilities treating surface water, pre- and post-chlorination systems must be independent to prevent possible siphoning of partially treated water into the clear well. The water supply to each eductor shall have a separate shut-off valve. No master shut-off valve will be allowed. ()

ii. The pipes carrying elemental liquid or dry gaseous chlorine under pressure must be Schedule 80 seamless steel tubing or other materials recommended by the Chlorine Institute (never use PVC). Rubber, PVC, polyethylene, or other materials recommended by the Chlorine Institute must be used for chlorine solution piping and fittings. Nylon products are not acceptable for any part of the chlorine solution piping system. ()

02. Disinfection with Ozone. Systems that are required to maintain a disinfectant residual in the distribution system shall supplement ozone disinfection with a chemical disinfectant. ()

a. The following are requirements for feed gas preparation: ()

i. Feed gas can be air, oxygen enriched air, or high purity oxygen. Sources of high purity oxygen include purchased liquid oxygen conforming with AWWA Standard B-304; on site generation using cryogenic air separation; or temperature, pressure or vacuum swing (adsorptive separation) technology. In all cases, the design engineer must ensure that the maximum dew point of -76°F (-60°C) will not be exceeded at any time. ()

ii. Air compression: ()

(1) Air compressors shall be of the liquid-ring or rotary lobe, oil-less, positive displacement type for smaller systems or dry rotary screw compressors for larger systems. ()

(2) The air compressors shall have the capacity to simultaneously provide for maximum ozone demand, provide the air flow required for purging the desiccant dryers (where required) and allow for standby capacity. ()

(3) Air feed for the compressor shall be drawn from a point protected from rain, condensation, mist, fog and contaminated air sources to minimize moisture and hydrocarbon content of the air supply. ()

(4) A compressed air after-cooler, entrainment separator, or a combination of the two (2) with automatic drain shall be provided prior to the dryers to reduce the water vapor. ()

(5) A back-up air compressor must be provided so that ozone generation is not interrupted in the event of a break-down. ()

iii. Air drying: ()

(1) Dry, dust-free and oil-free feed gas must be provided to the ozone generator. Dry gas is essential to prevent formation of nitric acid, to increase the efficiency of ozone generation and to prevent damage to the generator dielectrics. Sufficient drying to a maximum dew point of -76°F (-60°C) must be provided at the end of the drying cycle. ()

(2) Drying for high pressure systems may be accomplished using heatless desiccant dryers only. For low pressure systems, a refrigeration air dryer in series with heat-reactivated desiccant dryers shall be used. ()

(3) A refrigeration dryer capable of reducing inlet air temperature to 40°F (4°C) shall be provided for low pressure air preparation systems. The dryer can be of the compressed refrigerant type or chilled water type. ()

(4) For heat-reactivated desiccant dryers, the unit shall contain two (2) desiccant filled towers complete with pressure relief valves, two (2) four-way valves and a heater. In addition, external type dryers shall have a cooler unit and blowers. The size of the unit shall be such that the specified dew point will be achieved during a minimum adsorption cycle time of sixteen (16) hours while operating at the maximum expected moisture loading conditions. ()

(5) Multiple air dryers shall be provided so that the ozone generation is not interrupted in the event of dryer breakdown. ()

(6) Each dryer shall be capable of venting “dry” gas to the atmosphere, prior to the ozone generator, to allow start-up when other dryers are “on-line.” ()

iv. Air filters: ()

(1) Air filters shall be provided on the suction side of the air compressors, between the air compressors and the dryers and between the dryers and the ozone generators. ()

(2) The filter before the desiccant dryers shall be of the coalescing type and be capable of removing aerosol and particulates larger than 0.3 microns in diameter. The filter after the desiccant dryer shall be of the particulate type and be capable of removing all particulates greater than 0.1 microns in diameter, or smaller if specified by the generator manufacturer. ()

v. Piping in the air preparation system can be common grade steel, seamless copper, stainless steel or galvanized steel. The piping must be designed to withstand the maximum pressures in the air preparation system. ()

b. The following requirements apply to the ozone generator: ()

i. Capacity. ()

(1) The production rating of the ozone generators shall be stated in pounds per day and kWhr per pound at a maximum cooling water temperature and maximum ozone concentration. ()

(2) The design shall ensure that the minimum concentration of ozone in the generator exit gas will not be less than one (1) percent (by weight). ()

(3) Generators shall be sized to have sufficient reserve capacity so that the system does not operate at peak capacity for extended periods of time resulting in premature breakdown of the dielectrics. ()

(4) The production rate of ozone generators will decrease as the temperature of the coolant increases. If there is to be a variation in the supply temperature of the coolant throughout the year, then pertinent data shall be used to determine production changes due to the temperature change of the supplied coolant. The design shall ensure that the generators can produce the required ozone at maximum coolant temperature. ()

(5) Appropriate ozone generator backup equipment must be provided. ()

ii. Electrical. The generators can be low, medium or high frequency type. Specifications shall require that the transformers, electronic circuitry and other electrical hardware be proven, high quality components designed for ozone service. ()

iii. Cooling. Adequate cooling shall be provided. The cooling water must be properly treated to minimize corrosion, scaling and microbiological fouling of the water side of the tubes. Where cooling water is treated, cross connection control shall be provided to prevent contamination of the potable water supply. ()

iv. Materials. To prevent corrosion, the ozone generator shell and tubes shall be constructed of Type 316L stainless steel. ()

- c. The following requirements apply to ozone contactors: ()
 - i. Bubble diffusers. ()
 - (1) Where disinfection is the primary application, a minimum of two (2) contact chambers, each equipped with baffles to prevent short circuiting and induce countercurrent flow, shall be provided. Ozone shall be applied using porous-tube or dome diffusers. ()
 - (2) The minimum contact time shall be ten (10) minutes. A shorter contact time (CT) may be approved by the Department if justified by appropriate design and "CT" considerations. ()
 - (3) Where taste and odor control is of concern, multiple application points and contactors shall be considered. ()
 - (4) Contactors shall be separate closed vessels that have no common walls with adjacent rooms. The contactor must be kept under negative pressure and sufficient ozone monitors shall be provided to protect worker safety. ()
 - (5) Contact vessels can be made of reinforced concrete, stainless steel, fiberglass or other material which will be stable in the presence of residual ozone and ozone in the gas phase above the water level. If contact vessels are made of reinforced concrete, all reinforcement bars shall be covered with a minimum of one and one-half (1.5) inches of concrete. ()
 - (6) Where necessary, a system shall be provided between the contactor and the off-gas destruct unit to remove froth from the air and return the other to the contactor or other location acceptable to the reviewing authority. If foaming is expected to be excessive, then a potable water spray system shall be placed in the contactor head space. ()
 - (7) All openings into the contactor for pipe connections, hatchways, etc. shall be properly sealed using welds or ozone resistant gaskets such as Teflon or Hypalon. ()
 - (8) Multiple sampling ports shall be provided to enable sampling of each compartment's effluent water and to confirm "CT" calculations. ()
 - (9) A pressure/vacuum relief valve shall be provided in the contactor and piped to a location where there will be no damage to the destruction unit. ()
 - (10) The depth of water in bubble diffuser contactors shall be a minimum of eighteen (18) feet. The contactor shall also have a minimum of three (3) feet of freeboard to allow for foaming. ()
 - (11) All contactors shall have provisions for cleaning, maintenance and drainage of the contactor. Each contactor compartment shall also be equipped with an access hatchway. ()
 - (12) Aeration diffusers shall be fully serviceable by either cleaning or replacement. ()
 - ii. Other contactors, such as the venturi or aspirating turbine mixer contactor, may be approved by the Department provided adequate ozone transfer is achieved and the required contact times and residuals can be met and verified. ()
- d. The following requirements apply to ozone destruction units: ()
 - i. A system for treating the final off-gas from each contactor must be provided in order to meet safety and air quality standards. Acceptable systems include thermal destruction and thermal/catalytic destruction units. ()
 - ii. The maximum allowable ozone concentration in the discharge is 0.1 ppm (by volume). ()

- iii. At least two (2) units shall be provided which are each capable of handling the entire gas flow. ()
- iv. Exhaust blowers shall be provided in order to draw off-gas from the contactor into the destruct unit. ()
- v. Catalysts must be protected from froth, moisture and other impurities which may harm the catalyst. ()
- vi. The catalyst and heating elements shall be located where they can easily be reached for maintenance. ()
- e. Piping materials: Only low carbon 304L and 316L stainless steels shall be used for ozone service with 316L preferred. ()
- f. The following requirements apply to joints and connections: ()
 - i. Connections on piping used for ozone service are to be welded where possible. ()
 - ii. Connections with meters, valves or other equipment are to be made with flanged joints with ozone resistant gaskets, such as Teflon or Hypalon. Screwed fittings shall not be used because of their tendency to leak. ()
 - iii. A positive closing plug or butterfly valve plus a leak-proof check valve shall be provided in the piping between the generator and the contactor to prevent moisture reaching the generator. ()
- g. The following requirements apply to instrumentation: ()
 - i. Pressure gauges shall be provided at the discharge from the air compressor, at the inlet to the refrigeration dryers, at the inlet and outlet of the desiccant dryers, at the inlet to the ozone generators and contactors, and at the inlet to the ozone destruction unit. ()
 - ii. Each generator shall have a trip which shuts down the generator when the wattage exceeds a certain preset level. ()
 - iii. Dew point monitors shall be provided for measuring the moisture of the feed gas from the desiccant dryers. Where there is potential for moisture entering the ozone generator from downstream of the unit or where moisture accumulation can occur in the generator during shutdown, post-generator dew point monitors shall be used. ()
 - iv. Air flow meters shall be provided for measuring air flow from the desiccant dryers to each of the other ozone generators, air flow to each contactor, and purge air flow to the desiccant dryers. ()
 - v. Temperature gauges shall be provided for the inlet and outlet of the ozone cooling water and the inlet and outlet of the ozone generator feed gas and, if necessary, for the inlet and outlet of the ozone power supply cooling water. ()
 - vi. Water flow meters shall be installed to monitor the flow of cooling water to the ozone generators and, if necessary, to the ozone power supply. ()
 - vii. Ozone monitors shall be installed to measure ozone concentration in both the feed-gas and off-gas from the contactor and in the off-gas from the destruct unit. For disinfection systems, monitors shall also be provided for monitoring ozone residuals in the water. The number and location of ozone residual monitors shall be such that the amount of time that the water is in contact with the ozone residual can be determined. ()
 - viii. A minimum of one ambient ozone monitor shall be installed in the vicinity of the contactor and a minimum of one shall be installed in the vicinity of the generator. Ozone monitors shall also be installed in any areas

where ozone gas may accumulate. ()

h. Safety requirements are as follows: ()

i. The maximum allowable ozone concentration in the air to which workers may be exposed must not exceed one-tenth part per million (0.1 ppm) by volume. ()

ii. Noise levels resulting from the operating equipment of the ozonation system shall be controlled to within acceptable limits by special room construction and equipment isolation. ()

iii. Emergency exhaust fans must be provided in the rooms containing the ozone generators to remove ozone gas if leakage occurs. ()

iv. A sign shall be posted indicating "No smoking, oxygen in use" at all entrances to the treatment plant. In addition, no flammable or combustible materials shall be stored within the oxygen generator areas. ()

03. Disinfection with Chlorine Dioxide. Chlorine dioxide may be considered as a primary and residual disinfectant, a pre-oxidant to control tastes and odors, to oxidize iron and manganese, and to control hydrogen sulfide and phenolic compounds. When choosing chlorine dioxide, consideration must be given to formation of the regulated by-products, chlorite and chlorate. ()

a. Chlorine dioxide generation equipment shall be factory assembled pre-engineered units with a minimum efficiency of ninety-five (95) percent. The excess free chlorine shall not exceed three (3) percent of the theoretical stoichiometric concentration required. ()

b. Other design requirements include: ()

i. The design shall comply with all applicable portions of Subsections 530.01.a. through 530.01.d. ()

ii. The maximum residual disinfectant level allowed shall be zero point eight (0.8) milligrams per liter (mg/l), even for short term exposures. ()

iii. Notification of a change in disinfection practices and the schedule for the changes shall be made known to the public; particularly to hospitals, kidney dialysis facilities and fish breeders, as chlorine dioxide and its by-products may have effects similar to chloramines. ()

04. Other Disinfecting Agents. Proposals for use of disinfecting agents other than those listed shall be submitted to the Department for approval prior to preparation of final plans and specifications. ()

531. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR CHEMICAL APPLICATION.

01. General Equipment Design. General equipment design shall be such that: ()

a. Feeders will be able to supply, at all times, the necessary amounts of chemicals at an accurate rate, throughout the range of feed. ()

b. Chemical-contact materials and surfaces are resistant to the aggressiveness of the chemical solution. ()

c. Corrosive chemicals are introduced in such a manner as to minimize potential for corrosion. ()

d. Chemicals that are incompatible are not stored or handled together. At facilities where more than one (1) chemical is stored or handled, tanks and pipelines shall be clearly labeled to identify the chemical they contain. ()

- e. All chemicals are conducted from the feeder to the point of application in separate conduits. ()
 - f. Chemical feeders are as near as practical to the feed point. ()
 - g. Chemical feeders and pumps shall operate at no lower than twenty percent (20%) of the feed range unless two fully independent adjustment mechanisms such as pump pulse rate and stroke length are fitted when the pump shall operate at no lower than ten percent (10%) of the rated maximum. ()
 - h. Spare parts shall be on hand for parts of feeders that are subject to frequent wear and damage. ()
 - i. Redundant chemical feeders with automatic switchover shall be provided when necessary to ensure adequate treatment. If the water treatment system includes at least two (2) process trains of equipment so that the plant design capacity can be maintained with any component out of service, redundant chemical feeders are not required on each process train. ()
- 02. Facility Design.** ()
- a. Where chemical feed is necessary for the protection of the supply, such as disinfection, coagulation or other essential processes, a minimum of two feeders shall be provided and a separate feeder shall be used for each chemical applied. ()
 - b. Chemical application control systems shall meet the following requirements: ()
 - i. Feeders may be manually or automatically controlled, with automatic controls being designed so as to allow override by manual controls. ()
 - ii. Chemical feeders shall be controlled by a flow sensing device so that injection of the chemicals will not continue when the flow of water stops. ()
 - iii. Automatic proportioning chlorinators are required where the rate of flow or chlorine demand is not reasonably constant. ()
 - iv. A means to measure water flow must be provided in order to determine chemical feed rates. ()
 - v. Provisions shall be made for measuring the quantities of chemicals used. ()
 - vi. Weighing scales shall be provided for weighing cylinders at all plants utilizing chlorine gas, fluoride solution feed. ()
 - vii. Weighing scales shall be capable of providing reasonable precision in relation to average daily dose. ()
 - viii. Where conditions warrant, for example with rapidly fluctuating intake turbidity, coagulant and coagulant aid addition may be made according to turbidity, streaming current or other sensed parameter. ()
 - c. Dry chemical feeders shall measure chemicals volumetrically or gravimetrically, provide adequate solution water and agitation of the chemical in the solution pot, and completely enclose chemicals to prevent emission of dust to the operating room. ()
 - d. Positive displacement type solution feed pumps must be capable of operating at the required maximum head conditions found at the point of injection. ()
 - e. Liquid chemical feeders shall be such that chemical solutions cannot be siphoned or overfed into

the water supply, by assuring discharge at a point of positive pressure, or providing vacuum relief, or providing a suitable air gap, or providing other suitable means or combinations as necessary. ()

- f.** Cross connection control must be provided to assure that the following requirements are satisfied. ()

 - i.** The service water lines discharging to solution tanks shall be properly protected from backflow. ()
 - ii.** No direct connection exists between any sewer and a drain or overflow from the feeder, solution chamber or tank by providing that all drains terminate at least six (6) inches or two pipe diameters, whichever is greater, above the overflow rim of a receiving sump, conduit or waste receptacle. ()
- g.** Chemical feed equipment shall be readily accessible for servicing, repair, and observation of operation. ()

 - h.** In-plant water supply for chemical mixing shall be: ()

 - i.** Ample in quantity and adequate in pressure. ()
 - ii.** Provided with means for measurement when preparing specific solution concentrations by dilution. ()
 - iii.** Properly treated for hardness, when necessary. ()
 - iv.** Properly protected against backflow. ()
 - v.** Obtained from a location sufficiently downstream of any chemical feed point to assure adequate mixing. ()
 - i.** Chemical storage facilities shall satisfy the following requirements: ()

 - i.** Storage tanks and pipelines for liquid chemicals shall be specified for use with individual chemicals and not used for different chemicals. Off-loading areas must be clearly labeled to prevent accidental cross-contamination. ()
 - ii.** Chemicals shall be stored in covered or unopened shipping containers, unless the chemical is transferred into an approved storage unit. ()
- j.** Bulk liquid storage tanks shall comply with the following requirements: ()

 - i.** A means which is consistent with the nature of the chemical solution shall be provided in a solution tank to maintain a uniform strength of solution. Continuous agitation shall be provided to maintain slurries in suspension. ()
 - ii.** Means shall be provided to measure the liquid level in the tank. ()
 - iii.** Bulk liquid storage tanks shall be kept covered. Bulk liquid storage tanks with access openings shall have such openings curbed and fitted with overhanging covers. ()
 - iv.** Subsurface locations for bulk liquid storage tanks shall be free from sources of possible contamination, and assure positive drainage for ground waters, accumulated water, chemical spills and overflows. ()
 - v.** Bulk liquid storage tanks shall be vented, but shall not vent through vents common with day tanks. Acid storage tanks must be vented to the outside atmosphere, but not through vents in common with day tanks. ()

- vi. Each bulk liquid storage tank shall be provided with a valved drain, protected against backflow. ()
- vii. Bulk liquid storage tanks shall have an overflow that is turned downward with the end screened with a twenty-four (24) mesh or similar non-corrodible screen, have a free fall discharge, and be located where noticeable. ()
- viii. Bulk liquid storage tanks shall be provided with secondary containment so that chemicals from equipment failure, spillage, or accidental drainage shall be fully contained. A common receiving basin may be provided for each group of compatible chemicals. The bulk liquid storage tank basin or the common receiving basin shall provide a secondary containment volume sufficient to hold one hundred ten percent (110%) of the volume of the largest storage tank. Piping shall be designed to minimize or contain chemical spills in the event of pipe ruptures. ()
- ix. Where chemical feed is necessary for the protection of the supply, a means to assure continuity of chemical supply while servicing a bulk liquid storage tank shall be provided. ()
- k.** Day tanks are subject to the requirements in Subsections 531.02.k.i. through 531.02.k.iv. For the purposes of Section 531, day tanks are defined as liquid chemical tanks holding no more than a thirty (30) hour chemical supply. ()
 - i. Day tanks shall be provided where bulk storage of liquid chemicals are provided. The Department may allow chemicals to be fed directly from shipping containers no larger than fifty-five (55) gallons. ()
 - ii. Day tanks shall meet all the requirements of Subsection 531.02.j., with the exception of Subsection 531.02.j.viii. Shipping containers do not require overflow pipes or drains as required by Subsection 531.02.j. and are not subject to the requirements of Subsection 531.02.j.viii. ()
 - iii. Where feasible, secondary containment shall be provided so that chemicals from equipment failure, spillage, or accidental drainage of day tanks shall be fully contained. A common receiving basin may be provided for each group of compatible chemicals. The common receiving basin shall provide a secondary containment volume sufficient to hold the volume of the largest storage tank. If secondary containment is not feasible, day tanks shall be located and protective curbing provided so that chemicals from equipment failure, spillage, or accidental drainage of day tanks shall not enter the water in conduits, treatment, or storage basins. Secondary containment is not required for a day tank if an Idaho licensed professional engineer demonstrates to the Department that the chemical concentration and volume, if spilled, will not be a safety hazard to employees, will not be hazardous to the public health, and will not harm the environment. ()
 - iv. Day tanks and the tank refilling line entry points shall be clearly labeled with the name of the chemical contained. ()
- l.** Provisions shall be made for measuring quantities of chemicals used to prepare feed solutions. ()
- m.** Vents from feeders, storage facilities and equipment exhaust shall discharge to the outside atmosphere above grade and remote from air intakes. ()
- 03. Chemicals.** Chemical shipping containers shall be fully labeled to include chemical name, purity and concentration, supplier name and address, and evidence of ANSI/NSF certification where applicable. ()
- 04. Safety Requirements for Chemical Facilities.** ()
 - a.** The following requirements apply to chlorine gas feed and storage rooms: ()
 - i. Each storage room shall be enclosed and separated from other operating areas. They shall be constructed in such a manner that all openings between the chlorine room and the remainder of the plant are sealed,

and provided with doors equipped with panic hardware, assuring ready means of exit and opening outward only to the building exterior. ()

- ii. Each room shall be provided with a shatter resistant inspection window installed in an interior wall. ()
 - iii. Each room shall have a ventilating fan with a capacity which provides one (1) complete air change per minute when the room is occupied. Where this is not appropriate due to the size of the room, a lesser rate may be allowed by the Department on a site specific basis. ()
 - iv. The ventilating fan shall take suction near the floor as far as practical from the door and air inlet, with the point of discharge so located as not to contaminate air inlets to any rooms or structures. Air inlets shall be through louvers near the ceiling. ()
 - v. Louvers for chlorine room air intake and exhaust shall facilitate airtight closure. ()
 - vi. Separate switches for the fan and lights shall be located outside of the chlorine room and at the inspection window. Outside switches shall be protected from vandalism. A signal light indicating fan operation shall be provided at each entrance when the fan can be controlled from more than one (1) point. ()
 - vii. Vents from feeders and storage shall discharge to the outside atmosphere, above grade. ()
 - viii. Where provided, floor drains shall discharge to the outside of the building and shall not be connected to any internal drainage systems or external drainage systems unless the external drainage systems drain to an approved discharge point. ()
 - ix. Chlorinator rooms shall be heated to sixty degrees Fahrenheit (60°F) and be protected from excessive heat. Cylinders and gas lines shall be protected from temperatures above that of the feed equipment. ()
 - x. Pressurized chlorine feed lines shall not carry chlorine gas beyond the chlorinator room. ()
 - xi. Critical isolation valves shall be conspicuously marked and access kept unobstructed. ()
 - xii. All chlorine rooms, buildings, and areas shall be posted with a prominent danger sign warning of the presence of chlorine. ()
 - xiii. Full and empty cylinders of chlorine gas shall be isolated from operating areas and stored in definitely assigned places away from elevators, stairs, or gangways. They shall be restrained in position to prevent being knocked over or damaged by passing or falling objects. In addition, they shall be stored in rooms separate from ammonia storage, out of direct sunlight, and at least twenty (20) feet from highly combustible materials. Cylinders shall not be kept in unventilated enclosures such as lockers and cupboards. ()
- b.** Where acids and caustics are used, they shall be kept in closed corrosion-resistant shipping containers or storage units. Acids and caustics shall not be handled in open vessels, but shall be pumped in undiluted form from original containers through suitable hose to the point of treatment or to a covered day tank. ()
- c.** Sodium chlorite for chlorine dioxide generation. Proposals for the storage and use of sodium chlorite shall be approved by the Department prior to the preparation of final plans and specifications. Provisions shall be made for proper storage and handling of sodium chlorite to eliminate any danger of fire or explosion associated with its oxidizing nature. ()
- i. Chlorite (sodium chlorite) shall be stored by itself in a separate room. It must be stored away from organic materials. The storage structure shall be constructed of noncombustible materials. If the storage structure must be located in an area where a fire may occur, water must be available to keep the sodium chlorite area cool enough to prevent heat-induced explosive decomposition of the chlorite. ()

ii. Care shall be taken to prevent spillage. An emergency plan of operation shall be available for the clean up of any spillage. Storage drums shall be thoroughly flushed prior to recycling or disposal. ()

d. Where ammonium hydroxide is used, an exhaust fan shall be installed to withdraw air from high points in the room and makeup air shall be allowed to enter at a low point. The feed pump, regulators, and lines shall be fitted with pressure relief vents discharging outside the building away from any air intake and with water purge lines leading back to the headspace of the bulk storage tank. ()

e. Where anhydrous ammonia is used, the storage and feed systems (including heaters where required) shall be enclosed and separated from other work areas and constructed of corrosion resistant materials. ()

i. Pressurized ammonia feed lines shall be restricted to the ammonia room. ()

ii. An emergency air exhaust system, as described in Subsection 531.04.a., but with an elevated intake, shall be provided in the ammonia storage room. ()

iii. Leak detection systems shall be fitted in all areas through which ammonia is piped. ()

iv. Special vacuum breaker/regulator provisions must be made to avoid potentially violent results of backflow of water into cylinders or storage tanks. ()

v. Consideration shall be given to the provision of an emergency gas scrubber capable of absorbing the entire contents of the largest ammonia storage unit whenever there is a risk to the public as a result of potential ammonia leaks. ()

05. Operator Safety. The Idaho General Safety and Health Standards, referenced in Subsection 002.02, may be used as guidance in designing facilities to ensure the safety of operators. The following requirements are in addition to the requirements of Subsection 501.12. ()

a. Respiratory protection equipment, meeting the requirements of the National Institute for Occupational Safety and Health (NIOSH) shall be available where chlorine gas is handled, and shall be stored at a convenient heated location, but not inside any room where chlorine is used or stored. The units shall use compressed air, have at least a thirty (30) minute capacity, and be compatible with or exactly the same as units used by the fire department responsible for the plant. ()

b. Chlorine leak detection. A bottle of concentrated ammonium hydroxide (fifty-six (56) per cent ammonia solution) shall be available for chlorine leak detection. Where ton containers are used, a leak repair kit approved by the Chlorine Institute shall be provided. ()

c. Protective equipment. ()

i. At least one pair of rubber gloves, a dust respirator of a type certified by NIOSH for toxic dusts, an apron or other protective clothing, and goggles or face mask shall be provided for each operator. ()

ii. A deluge shower and eyewashing device shall be installed where strong acids and alkalis are used or stored. A water holding tank that will allow water to come to room temperature shall be installed in the water line feeding the deluge shower and eyewashing device. Other methods of water tempering will be considered on an individual basis. ()

iii. For chemicals other than strong acids and alkalis, an appropriate eye washing device or station shall be provided. ()

iv. Other protective equipment shall be provided as necessary. ()

06. Design Requirements for Specific Applications. In addition to Subsection 531.01 through 531.03, the following design requirements apply for the specific applications within Subsection 531.06 of this rule. ()

a. Sodium chlorite for chlorine dioxide generation. Positive displacement feeders shall be provided. Tubing for conveying sodium chlorite or chlorine dioxide solutions shall be Type 1 PVC, polyethylene or materials recommended by the manufacturer. Chemical feeders may be installed in chlorine rooms if sufficient space is provided. Otherwise, facilities meeting the requirements of chlorine rooms shall be provided. Feed lines shall be installed in a manner to prevent formation of gas pockets and shall terminate at a point of positive pressure. Check valves shall be provided to prevent the backflow of chlorine into the sodium chlorite line. ()

b. Hypochlorite facilities shall meet the following requirements: ()

i. Hypochlorite shall be stored in the original shipping containers or in hypochlorite compatible containers. Storage containers or tanks shall be sited out of the sunlight in a cool and ventilated area. ()

ii. Stored hypochlorite shall be pumped undiluted to the point of addition. Where dilution is unavoidable, deionized or softened water shall be used. ()

iii. Storage areas, tanks, and pipe work shall be designed to avoid the possibility of uncontrolled discharges and a sufficient amount of appropriately selected spill absorbent shall be stored on-site. ()

iv. Hypochlorite feeders shall be positive displacement pumps with compatible materials for wetted surfaces. ()

v. To avoid air locking in smaller installations, small diameter suction lines shall be used with foot valves and degassing pump heads. In larger installations flooded suction shall be used with pipe work arranged to ease escape of gas bubbles. Calibration tubes or mass flow monitors which allow for direct physical checking of actual feed rates shall be fitted. ()

vi. Injectors shall be made removable for regular cleaning where hard water is to be treated. ()

c. When ammonium sulfate is used, the tank and dosing equipment contact surfaces shall be made of corrosion resistant non-metallic materials. Provision shall be made for removal of the agitator after dissolving the solid. The tank shall be fitted with a lid and vented outdoors. Injection of the solution should take place in the center of treated water flow at a location where there is high velocity movement. ()

d. When aqua ammonia (ammonium hydroxide) is used, the feed pumps and storage shall be enclosed and separated from other operating areas. The aqua ammonia room shall be equipped as required for chlorinator rooms with the following changes: ()

i. A corrosion resistant, closed, unpressurized tank shall be used for bulk storage, vented through an inert liquid trap to a high point outside and an incompatible connector, or lockout provisions shall be made to prevent accidental addition of other chemicals to the storage tank. ()

ii. The storage tank shall be designed to avoid conditions where temperature increases cause the ammonia vapor pressure over the aqua ammonia to exceed atmospheric pressure. This capability can be provided by cooling/refrigeration or diluting or mixing the contents with water without opening the system. ()

iii. The aqua ammonia shall be conveyed direct from storage to the treated water stream injector without the use of a carrier water stream unless the carrier stream is softened. ()

iv. The point of delivery to the main water stream shall be placed in a region of turbulent water flow. ()

v. Provisions shall be made for easy access for removal of calcium scale deposits from the injector. ()

532. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR SOFTENING.

The softening process selected must be based upon the mineral qualities of the raw water and the desired finished

water quality in conjunction with requirements for disposal of sludge or brine waste (see Section 540), cost of plant, cost of chemicals, and plant location. Applicability of the process chosen shall be demonstrated. ()

01. Lime or Lime-Soda Process. Rapid mix, flocculation, and sedimentation processes shall meet the requirements of Section 520. In addition the following requirements must be met: ()

a. When split treatment is used, an accurate means of measuring and splitting the flow must be provided. ()

b. Rapid mix basins must provide not more than thirty (30) seconds detention time with adequate velocity gradients to keep the lime particles dispersed. ()

c. Equipment for stabilization of water softened by the lime or lime-soda process is required, see Section 537. ()

d. Mechanical sludge removal equipment shall be provided in the sedimentation basin. ()

e. Provisions must be included for proper disposal of softening sludges; see Section 540. ()

f. The plant processes must be manually started following shut-down. ()

02. Cation Exchange Process. ()

a. Pre-treatment is required when the content of iron, manganese, or a combination of the two, is one milligram per liter (1 mg/l) or more. ()

b. The units may be of pressure or gravity type, of either an upflow or downflow design. Automatic regeneration based on volume of water softened shall be used unless manual regeneration is justified and is approved by the Department. A manual override shall be provided on all automatic controls. ()

c. Rate-of-flow controllers or the equivalent shall be used to control the hydraulic loading of cation exchange units. ()

d. The bottoms, strainer systems and support for the exchange resin shall conform to the criteria provided for rapid rate gravity filters in Section 521. ()

e. Cross Connection Control. Backwash, rinse and air relief discharge pipes shall be installed in such a manner as to prevent any possibility of back-siphonage. ()

f. A bypass must be provided around softening units to produce a blended water of desirable hardness. Totalizing meters must be installed on the bypass line and on each softener unit. The bypass line must have a shutoff valve. ()

g. When the applied water contains a chlorine residual, the cation exchange resin shall be a type that is not damaged by residual chlorine. ()

h. Smooth-nose sampling taps must be provided for the collection of representative samples. The taps shall be located to provide for sampling of the softener influent, effluent, blended water, and on the brine tank discharge piping. The sampling taps for the blended water shall be at least twenty (20) feet downstream from the point of blending. Petcocks are not acceptable as sampling taps. ()

i. Brine and salt storage tanks shall meet the following requirements: ()

i. Salt dissolving or brine tanks and wet salt storage tanks must be covered and must be corrosion-resistant. ()

ii. The make-up water inlet must be protected from back-siphonage. ()

- iii. Wet salt storage basins must be equipped with manholes or hatchways for access and for direct dumping of salt from truck or railcar. Openings must be provided with raised curbs and watertight covers having overlapping edges similar to those required for finished water reservoirs. ()
- iv. Overflows, where provided, must be protected with twenty-four (24) mesh or similar non-corrodible screens, and must terminate with either a turned down bend having a proper free fall discharge or a self-closing flap valve. ()
- v. The salt shall be supported on graduated layers of gravel placed over a brine collection system. ()
- vi. Alternative designs which are conducive to frequent cleaning of the wet salt storage tank may be considered. ()
- vii. An eductor may be used to transfer brine from the brine tank to the softeners. If a pump is used, a brine measuring tank or means of metering shall be provided to obtain the proper dilution. ()
- j. Suitable disposal must be provided for brine waste; see Section 540. Where the volume of spent brine must be reduced, consideration may be given to using a part of the spent liquid concentrate for a subsequent regeneration. ()
- k. Pipes and contact materials must be resistant to the aggressiveness of salt. Plastic and red brass are acceptable piping materials. Steel and concrete must be coated with a non-leaching protective coating which is compatible with salt and brine. ()
- l. Bagged salt and dry bulk salt storage shall be enclosed and separated from other operating areas in order to prevent damage to equipment. ()

533. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR TASTE AND ODOR CONTROL.

Provision shall be made for the control of taste and odor. Chemicals shall be added sufficiently ahead of other treatment processes to assure adequate contact time for an effective and economical use of the chemicals. Where severe taste and odor problems are encountered, in-plant studies, pilot plant studies, or both in-plant and pilot plant studies may be required. See Subsection 501.19 for general information on conducting pilot studies. ()

01. Chlorination. When using chlorination as a method of taste and odor control adequate contact time must be provided to complete the chemical reactions involved. ()

02. Chlorine Dioxide. Provisions shall be made for proper storing and handling of the sodium chlorite, so as to eliminate any danger of explosion. ()

03. Powdered Activated Carbon. ()

a. The carbon can be added as a pre-mixed slurry or by means of a dry-feed machine as long as the carbon is properly wetted. ()

b. Continuous agitation or resuspension equipment is necessary to keep the carbon from depositing in the slurry storage tank. ()

c. Provision shall be made for adequate dust control. ()

d. Powdered activated carbon shall be handled as a potentially combustible material. ()

04. Granular Activated Carbon. Replacement of anthracite with GAC may be considered as a control measure for geosmin and methyl isoborneol (MIB) taste and odors from algae blooms in surface water applications. Demonstration studies are required by the Department. ()

05. Copper Sulfate and Other Copper Compounds. Continuous or periodic treatment of surface water with copper compounds to kill algae or other growths shall be controlled to prevent copper in excess of one point zero (1.0) milligrams per liter as copper in the plant effluent or distribution system. Care shall be taken to assure an even distribution of the chemical within the treatment area. ()

06. Potassium Permanganate. Application of potassium permanganate may be considered, providing the treatment shall be designed so that the products of the reaction are not visible in the finished water. ()

07. Ozone. Ozonation may be used as a means of taste and odor control. Adequate contact time must be provided to complete the chemical reactions involved. ()

08. Other Methods. Other methods of taste and odor control shall be made only after pilot plant tests and approval of the Department. ()

534. FACILITY AND DESIGN STANDARDS: AERATION PROCESSES.

Public water systems that install aeration treatment are subject to the Rules of the Department of Environmental Quality, IDAPA 58.01.01, "Rules for the Control of Air Pollution in Idaho." The system owner or the design engineer shall contact one of the Department's regional offices for information on obtaining a permit or an exemption for the emissions resulting from the aeration process. General information may be found on the DEQ website <http://www.deq.idaho.gov>. ()

01. Natural Draft Aeration. Design shall provide: ()

a. Perforations in the distribution pan three sixteenths to one-half ($3/16 - 1/2$) inches in diameter, spaced one to three (1-3) inches on centers to maintain a six (6) inch water depth. ()

b. For distribution of water uniformly over the top tray. ()

c. Discharge through a series of three (3) or more trays with separation of trays not less than twelve (12) inches. ()

d. Loading at a rate of one to five (1-5) gallons per minute for each square foot of total tray area. ()

e. Trays with slotted, heavy wire (1/2 inch openings) mesh or perforated bottoms. ()

f. Construction of durable material resistant to aggressiveness of the water and dissolved gases. ()

g. Protection from insects by twenty-four (24) mesh or similar non-corrodible screen. ()

02. Forced or Induced Draft Aeration. Devices shall be designed to: ()

a. Include a blower with a weatherproof motor in a tight housing and screened enclosure. ()

b. Ensure adequate counter current of air through the enclosed aerator column. ()

c. Exhaust air directly to the outside atmosphere. ()

d. Include a down-turned and twenty-four (24) mesh or similar non-corrodible screened air outlet and inlet. ()

e. Be such that air introduced in the column shall be as free from obnoxious fumes, dust, and dirt as possible. ()

f. Be such that sections of the aerator can be easily reached or removed for maintenance of the ()

interior or installed in a separate aerator room. ()

g. Provide loading at a rate of one to five (1-5) gallons per minute for each square foot of total tray area. ()

h. Ensure that the water outlet is adequately sealed to prevent unwarranted loss of air. ()

i. Discharge through a series of five (5) or more trays with separation of trays not less than six (6) inches or as approved by the Department. ()

j. Provide distribution of water uniformly over the top tray. ()

k. Be of durable material resistant to the aggressiveness of the water and dissolved gases. ()

03. Spray Aeration. Design shall provide: ()

a. A hydraulic head of between five (5) and twenty-five (25) feet. ()

b. Nozzles, with the size, number, and spacing of the nozzles being dependent on the flowrate, space, and the amount of head available. ()

c. Nozzle diameters in the range of one (1) to one and one-half (1.5) inches to minimize clogging. ()

d. An enclosed basin to contain the spray. Any openings for ventilation must be protected with a twenty-four (24) mesh or similar non-corrodible screen. ()

04. Pressure Aeration. Pressure aeration may be used for oxidation purposes only if the pilot plant study indicates the method is applicable; it is not acceptable for removal of dissolved gases. See Subsection 501.19 for general information on conducting pilot studies. Filters following pressure aeration must have adequate exhaust devices for release of air. Pressure aeration devices shall be designed to give thorough mixing of compressed air with water being treated and provide twenty-four (24) mesh or similar non-corrodible screened and filtered air, free of obnoxious fumes, dust, dirt and other contaminants. ()

05. Packed Tower Aeration. Packed tower aeration may be used for the removal of volatile organic chemicals, trihalomethanes, carbon dioxide, and radon. Final design shall be based on the results of pilot studies and be approved by the Department. ()

a. Process design criteria. ()

i. Justification for the design parameters selected (i.e., height and diameter of unit, air to water ratio, packing depth, surface loading rate, etc.) shall be provided to the Department for review. The pilot study shall evaluate a variety of loading rates and air to water ratios at the peak contaminant concentration. Special consideration shall be given to removal efficiencies when multiple contaminations occur. Where there is considerable past performance data on the contaminant to be treated and there is a concentration level similar to previous projects, the Department may approve the process design based on use of appropriate calculations without a pilot study. ()

ii. The tower shall be designed to reduce contaminants to below the maximum contaminant level and to the lowest practical level. ()

iii. The type and size of the packing used in the full scale unit shall be the same as that used in the pilot study. ()

iv. The maximum air to water ratio for which credit will be given is 80:1. ()

v. The design shall consider potential fouling problems from calcium carbonate and iron precipitation and from bacterial growth. It may be necessary to provide pretreatment. Disinfection capability shall be provided

- prior to and after packed tower aeration. ()
- vi. The effects of temperature shall be considered. ()
 - vii. Redundant packed tower aeration capacity at the design flowrate shall be provided. ()
- b.** The tower may be constructed of stainless steel, concrete, aluminum, fiberglass or plastic. Uncoated carbon steel is not allowed. Towers constructed of light-weight materials shall be provided with adequate support to prevent damage from wind. Packing materials shall be resistant to the aggressiveness of the water, dissolved gases and cleaning materials and shall be suitable for contact with potable water. ()
- c.** Water flow system. ()
- i. Water shall be distributed uniformly at the top of the tower using spray nozzles or orifice-type distributor trays that prevent short circuiting. ()
 - ii. A mist eliminator shall be provided above the water distributor system. ()
 - iii. A side wiper redistribution ring shall be provided at least every ten (10) feet in order to prevent water channeling along the tower wall and short circuiting. ()
 - iv. Sample taps shall be provided in the influent and effluent piping. The sample taps shall satisfy the requirements of Subsection 501.09. ()
 - v. The effluent sump, if provided, shall have easy access for cleaning purposes and be equipped with a drain valve. The drain shall not be connected directly to any storm or sanitary sewer. ()
 - vi. The design shall prevent freezing of the influent riser and effluent piping when the unit is not operating. ()
 - vii. The water flow to each tower shall be metered. ()
 - viii. An overflow line shall be provided which discharges twelve (12) to fourteen (14) inches above a splash pad or drainage inlet. Proper drainage shall be provided to prevent flooding of the area. ()
 - ix. Means shall be provided to prevent flooding of the air blower. ()
- d.** Air flow system. ()
- i. The air inlet to the blower and the tower discharge vent shall be down-turned and protected with a non-corrodible twenty-four (24) mesh screen to prevent contamination from extraneous matter. ()
 - ii. The air inlet shall be in a protected location. ()
 - iii. An air flow meter shall be provided on the influent air line or an alternative method to determine the air flow shall be provided. ()
 - iv. A positive air flow sensing device and a pressure gauge must be installed on the air influent line. The positive air flow sensing device must be a part of an automatic control system which will turn off the influent water if positive air flow is not detected. The pressure gauge will serve as an indicator of fouling buildup. ()
 - v. A backup motor for the air blower must be readily available. ()
- e.** Other features that shall be provided: ()
- i. A sufficient number of access ports with a minimum diameter of twenty-four (24) inches to facilitate inspection, media replacement, media cleaning and maintenance of the interior. ()

- ii. A method of cleaning the packing material when iron, manganese, or calcium carbonate fouling may occur. ()
- iii. Tower effluent collection and pumping wells constructed to clearwell standards. ()
- iv. Provisions for extending the tower height without major reconstruction. ()
- v. No bypass shall be provided unless specifically approved by the Department. ()
- vi. Disinfection and adequate contact time after the water has passed through the tower and prior to the distribution system. ()
- vii. Adequate packing support to allow free flow of water and to prevent deformation with deep packing heights. ()
- viii. Operation of the blower and disinfectant feeder equipment during power failures. ()
- ix. Adequate foundation to support the tower and lateral support to prevent overturning due to wind loading. ()
- x. Fencing and locking gate to prevent vandalism. ()
- xi. An access ladder with safety cage for inspection of the aerator including the exhaust port and demister. ()
- xii. Electrical interconnection between blower, disinfectant feeder and supply pump. ()

06. Other Methods of Aeration. Other methods of aeration may be used if applicable to the treatment needs. Such methods include but are not restricted to spraying, diffused air, cascades and mechanical aeration. The treatment processes are subject to the approval of the Department. ()

07. Protection of Aerators. All aerators except those discharging to lime softening or clarification plants shall be protected from contamination by birds, insects, wind borne debris, rainfall and water draining off the exterior of the aerator. ()

08. Disinfection. Ground water supplies exposed to the atmosphere by aeration must receive disinfection as described in Section 530 as the minimum additional treatment. ()

535. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR IRON AND MANGANESE CONTROL SYSTEMS.

Iron and manganese control, as used herein, refers solely to treatment processes designed specifically for this purpose. The treatment process used will depend upon the character of the raw water. The selection of one (1) or more treatment processes must meet specific local conditions as determined by engineering investigations, including chemical analyses of representative samples of water to be treated, and receive the approval of the Department. The Department may require a pilot plant study in order to gather all information pertinent to the design. See Subsection 501.19 for general information on conducting pilot studies. ()

01. Removal by Oxidation, Detention and Filtration. ()

a. Oxidation may be by aeration or by chemical oxidation with chlorine, potassium permanganate, ozone or chlorine dioxide. ()

b. Detention time: ()

i. A minimum detention time of thirty (30) minutes shall be provided following aeration to ensure that the oxidation reactions are as complete as possible. This minimum detention may be omitted only where a pilot

plant study indicates no need for detention. The detention basin may be designed as a holding tank without provisions for sludge collection but with sufficient baffling to prevent short circuiting. ()

ii. Sedimentation basins shall be provided when treating water with high iron or manganese content, or where chemical coagulation is used to reduce the load on the filters. Provisions for sludge removal shall be made. ()

c. Filtration. Rapid rate pressure filters are normally used for iron and manganese removal. Pressure filters shall not be used in the filtration of surface or other polluted waters or following lime-soda softening. ()

i. The rate of filtration shall not exceed three (3) gallons per minute per square foot of filter area except where in-plant testing as approved by the Department has demonstrated satisfactory results at higher rates. ()

ii. The filters shall be designed to provide for: ()

(1) Loss of head gauges on the inlet and outlet pipes of each battery of filters. ()

(2) An easily readable meter or flow indicator on each battery of filters. ()

(3) Filtration and backwashing of each filter individually with an arrangement of piping as simple as possible to accomplish these purposes. ()

(4) Minimum side wall shell height of five (5) feet. A corresponding reduction in side wall height is acceptable where proprietary bottoms permit reduction of the gravel depth. ()

(5) The top of the wash water collectors to be at least eighteen (18) inches above the surface of the media, ()

(6) The underdrain system to efficiently collect the filtered water and to uniformly distribute the backwash water at a rate not less than fifteen (15) gallons per minute per square foot of filter area. ()

(7) Backwash flow indicators and controls that are easily readable while operating the control valves. ()

(8) An air release valve on the highest point of each filter. ()

(9) An accessible manhole to facilitate inspection and repairs for filters thirty-six (36) inches or more in diameter. Sufficient handholds shall be provided for filters less than thirty-six (36) inches in diameter. ()

(10) A means to observe the wastewater during backwashing and construction to prevent cross connection. ()

02. Removal by Manganese Coated Media Filtration. This process consists of a continuous or batch feed of potassium permanganate to the influent of a manganese coated media filter. ()

a. Other oxidizing agents or processes such as chlorination or aeration may be used prior to the permanganate feed to reduce the cost of the chemical. ()

b. An anthracite media cap of at least six (6) inches or more as required by the Department shall be provided over manganese coated media. ()

c. Normal filtration rate shall be three (3) gallons per minute per square foot. ()

d. Normal wash rate shall be eight (8) to ten (10) gallons per minute per square foot with manganese greensand and fifteen (15) to twenty (20) gallons per minute with manganese coated media. ()

e. Sample taps shall be provided prior to application of permanganate, immediately ahead of filtration, at points between the anthracite media, and at the filter effluent. The sample taps shall satisfy the requirements of Subsection 501.09. ()

03. Removal by Ion Exchange. This process is not acceptable where either the raw water or wash water contains dissolved oxygen or other oxidants. ()

04. Biological Removal. Biofiltration to remove manganese, iron, or a combination of manganese and iron requires on-site piloting testing to establish effectiveness. The final filter design shall be based on the on-site pilot plant studies. ()

05. Sequestration by Polyphosphates. This process shall not be used when iron, manganese or a combination thereof exceeds one point zero (1.0) mg/l. The total phosphate applied shall not exceed ten (10) mg/l as PO₄. Where phosphate treatment is used, satisfactory chlorine residuals shall be maintained in the distribution system. Possible adverse affects on corrosion must be addressed when phosphate addition is proposed for iron sequestering. ()

a. Stock phosphate solution must be kept covered and disinfected by carrying approximately ten (10) mg/l free chlorine residual unless it is demonstrated to the satisfaction of the Department that the phosphate solution is not able to support bacterial growth and the phosphate solution is being fed from the covered shipping container or an approved disinfected tank. Phosphate solutions having a pH of two point zero (2.0) or less may also be exempted from this requirement by the Department. ()

b. Polyphosphates shall not be applied ahead of iron and manganese removal treatment. The point of application shall be prior to any aeration, oxidation or disinfection if no iron or manganese removal treatment is provided. ()

06. Sequestration by Sodium Silicates. Sodium silicate sequestration of iron and manganese is allowed only for ground water supplies prior to air contact. On-site pilot studies are required to determine the suitability of sodium silicate for the particular water and the minimum feed needed. Rapid oxidation of the metal ions such as by chlorine or chlorine dioxide must accompany or closely precede the sodium silicate addition. ()

a. Sodium silicate addition is applicable to waters containing up to two (2) mg/l of iron, manganese or combination thereof. ()

b. Chlorine residuals shall be maintained throughout the distribution system to prevent biological breakdown of the sequestered iron. ()

c. The amount of silicate added shall be limited to twenty (20) mg/l as SiO₂, but the amount of added and naturally occurring silicate shall not exceed sixty (60) mg/l as SiO₂. ()

d. Sodium silicate shall not be applied ahead of iron or manganese removal treatment. ()

07. Sampling Taps. Smooth-nosed sampling taps shall be provided for control purposes. Taps shall be located on each raw water source, each treatment unit influent and each treatment unit effluent. The sample taps shall satisfy the requirements of Subsection 501.09. ()

536. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR FLUORIDATION.

01. Chemical Feed Equipment and Methods. In addition to the requirements in Section 531, fluoride feed equipment shall meet the following requirements: ()

a. Scales, loss-of-weight recorders or liquid level indicators, as appropriate, accurate to within five (5) percent of the average daily change in reading shall be provided for chemical feeds. ()

b. The accuracy of chemical feeders used for fluoridation shall be plus or minus five (5) percent of the intended dose. ()

- c. Unsealed storage units for fluorosilicic acid shall be vented to the atmosphere at a point outside any building. ()
 - d. Fluoride compound shall not be added before lime-soda softening or ion exchange softening. ()
 - e. The point of application of fluorosilicic acid, if into a horizontal pipe, shall be in the lower half of the pipe. ()
 - f. A fluoride solution shall be applied by a positive displacement pump having a stroke rate not less than twenty (20) strokes per minute, and at a feed rate not less than twenty (20) percent of the rated capacity of the feed pump. ()
 - g. A spring opposed diaphragm type anti-siphon device shall be provided for all fluoride feed lines and dilution water lines. ()
 - h. Except for constant flow systems, a device to measure the flow of water to be treated is required. ()
 - i. The dilution water pipe shall terminate at least two (2) pipe diameters above the solution tank. ()
 - j. Water used for sodium fluoride dissolution shall be softened if hardness exceeds seventy-five (75) mg/l as calcium carbonate. ()
 - k. Fluoride solutions shall be injected at a point of continuous positive pressure or a suitable air gap provided. ()
 - l. The electrical outlet used for the fluoride feed pump shall be interconnected with the well or service pump. ()
 - m. Consideration shall be given to providing a separate room for fluorosilicic acid storage and feed. ()
- 02. Secondary Controls.** Secondary control systems for fluoride chemical feed devices shall be provided as a means of reducing the possibility for overfeed; these may include flow or pressure switches or other devices. ()
- 03. Dust Control.** Provision must be made for the transfer of dry fluoride compounds from shipping containers to storage bins or hoppers in such a way as to minimize the quantity of fluoride dust which may enter the room in which the equipment is installed. The enclosure shall be provided with an exhaust fan and dust filter which places the hopper under a negative pressure. Air exhausted from fluoride handling equipment shall discharge through a dust filter to the outside atmosphere of the building. ()

537. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR STABILIZATION.

Water that is unstable due either to natural causes or to subsequent treatment shall be stabilized. The expected treated water quality shall be evaluated to determine what, if any, treatment is necessary. ()

- 01. Carbon Dioxide Addition.** ()
- a. Recarbonation basin design shall provide the following: ()
 - i. A total detention time of twenty (20) minutes. ()
 - ii. A mixing compartment having a detention time of at least three (3) minutes. ()

- iii. A reaction compartment. ()
- iv. The mixing and reaction compartments shall have a depth sufficient to provide a diffuser submergence of not less than seven and one-half (7.5) feet and no greater than the manufacturer's recommendation. ()
- b. Where liquid carbon dioxide is used, adequate precautions must be taken to prevent carbon dioxide from entering the plant from the recarbonation process. ()
- c. Recarbonation tanks shall be located outside or be sealed and vented to the outside with adequate seals and adequate purge flow of air to ensure workers safety. ()
- d. Provisions shall be made for draining the recarbonation basin and removing sludge. ()
- 02. Phosphates.** The feeding of phosphates may be used for sequestering calcium, for corrosion control, and in conjunction with alkali feed following ion exchange softening. ()
 - a. Stock phosphate solution must be kept covered and disinfected by carrying approximately ten (10) mg/l free chlorine residual unless the phosphate is not able to support bacterial growth and the phosphate is being fed from the covered shipping container. Phosphate solutions having a pH of two point zero (2.0) or less are exempted from this requirement. ()
 - b. Satisfactory chlorine residuals shall be maintained in the distribution system when phosphates are used. ()
- 03. Split Treatment.** Raw water may be blended with lime-softened water to partially stabilize the water prior to secondary clarification and filtration. Treatment plants designed to utilize split treatment shall also contain facilities for further stabilization by other methods. ()
- 04. Water Unstable Due to Biochemical Action in Distribution System.** Unstable water resulting from the bacterial decomposition of organic matter in water (especially in dead end mains), the biochemical action within tubercles, and the reduction of sulfates to sulfides shall be prevented by the maintenance of a free or combined chlorine residual throughout the distribution system. ()

538. – 539. (RESERVED)

540. FACILITY AND DESIGN STANDARDS: DESIGN STANDARDS FOR TREATMENT AND DISPOSAL OF TREATMENT PLANT WASTE RESIDUALS.

Provisions must be made for proper disposal of water treatment plant waste such as sanitary, laboratory, clarification sludge, softening sludge, iron sludge, filter backwash water, and liquid concentrates. In locating waste disposal facilities, due consideration shall be given to preventing potential contamination of the water supply. ()

- 01. Sanitary Waste.** The sanitary waste from water treatment plants, pumping stations, and other waterworks installations must receive treatment. Waste from these facilities shall be discharged directly to a sanitary sewer system, when available and feasible, or to an adequate on-site waste treatment facility approved under the provisions of IDAPA 58.01.03, "Individual/Subsurface Sewage Disposal Rules." ()
- 02. Liquid Concentrates.** ()
 - a. Waste from ion exchange plants, demineralization plants, reverse osmosis, on-site chlorine generators, or other plants which produce liquid concentrates may be disposed of by the following methods: ()
 - i. Liquid concentrates that contain radionuclides must be further treated to remove the radioactive constituents as sludge. See Subsection 540.03.e. for disposal requirements for sludge that contains radionuclides. The residual liquids from which radionuclides have been removed may be disposed of in accordance with Subsections 540.02.a.ii. through 540.02.a.iv. ()

ii. Controlled discharge to a stream or other receiving water body if adequate dilution is available. Such discharge will require a National Pollution Elimination System Permit from the U.S. Environmental Protection Agency, Region 10, 1200 Sixth Avenue, Seattle, WA 98101, Telephone (206) 553-1200. ()

iii. Liquid concentrates may be discharged to a sanitary sewer, if available and feasible. Acceptance of such waste must be approved by the sewer authority. ()

iv. Subsurface disposal or land application of liquid concentrates may be permitted, but only if such discharge meets the requirements of IDAPA 58.01.03, "Individual/Subsurface Sewage Disposal Rules" for subsurface disposal or the requirements of IDAPA 58.01.17, "Recycled Water Rules" for land application. ()

b. Should the nature of the liquid concentrate cause it to be ineligible for permitted discharge as described in Subsection 540.02.a., further onsite treatment of the liquid concentrate may be required in order to produce sludge and liquid waste that will meet the permit criteria for one (1) or more of the disposal options. ()

03. Sludge Waste. Sludge is the solid waste resulting from coagulation, precipitation, or passive settling of liquid concentrates. Depending on composition, liquids remaining after sludge removal may be disposed of by methods described in Subsection 540.02, recycled through the treatment plant, or may be pure enough to be unregulated. The following methods of treatment and disposal apply to sludge: ()

a. Precipitative Softening Sludge. ()

i. At least two (2) temporary storage lagoons must be provided in order to give flexibility in operation. Provisions must be made for convenient cleaning. An acceptable means of final sludge disposal must be provided. ()

ii. Liquid or dewatered precipitative softening sludge may be applied to farm land if heavy metals or other contaminants do not exceed the requirements of IDAPA 58.01.02, "Water Quality Standards." ()

iii. Dewatered precipitative softening sludge may be disposed of in a sanitary landfill in accordance with the requirements of IDAPA 58.01.06, "Solid Waste Management Rules." Acceptance of such waste is at the discretion of the landfill authority. ()

b. Alum or Ferric Sludge. ()

i. Temporary storage lagoons must contain at least two (2) compartments to facilitate independent filling and dewatering operations. Mechanical concentration may be considered. If mechanical dewatering is used, it shall be preceded by sludge concentration and chemical pre-treatment. A pilot plant study is required before the design of a mechanical dewatering installation. See Subsection 501.19 for general information on conducting pilot studies. ()

ii. Alum or ferric sludge may be discharged to a sanitary sewer if available and feasible. Acceptance of such waste must be approved by the sewer authority. ()

iii. Dewatered alum or ferric sludge may be disposed of in a sanitary landfill in accordance with the requirements of IDAPA 58.01.06, "Solid Waste Management Rules." Acceptance of such waste is at the discretion of the landfill authority. ()

iv. Alum or ferric sludge may be disposed of by land application if the permitting requirements of IDAPA 58.01.02, "Water Quality Standards," and IDAPA 58.01.17, "Recycled Water Rules," are met. ()

v. Water removed from alum or ferric sludge may be disposed of in the same manner as liquid concentrates, as described in Subsection 540.02. ()

c. Red Water. Red water is the waste filter wash water from iron and manganese removal plants.

- ()
- i. If sand filters are used they shall have the following features: ()
- (1) Total filter area shall be sufficient to adequately dewater applied solids. Unless the filter is small enough to be cleaned and returned to service in one (1) day, two (2) or more cells are required. ()
- (2) The “red water” filter shall have sufficient capacity to contain, above the level of the sand, the entire volume of wash water produced by washing all of the production filters in the plant, unless the production filters are washed on a rotating schedule and the flow through the production filters is regulated by true rate of flow controllers. Then sufficient volume shall be provided to properly dispose of the wash water involved. ()
- (3) Where freezing is a problem, provisions should be made for covering the filters during the winter months. ()
- (4) “Red water” filters shall not have common walls with finished water. ()
- ii. Subsurface infiltration lagoons may be permitted, but only if such discharge meets the requirements of IDAPA 58.01.03, “Individual/Subsurface Sewage Disposal Rules.” ()
- iii. “Red water” may be discharged to a sanitary sewer if available and feasible. Acceptance of such waste must be approved by the sewer authority. Design shall prevent cross connections and there shall be no common walls between potable and non-potable fluid. ()
- d. Filter Backwash Water.** ()
- i. Recycling is permitted if the backwash waters are returned to the head of the treatment plant or another entry point if supported by engineering studies. Backwash water shall be held for a sufficient time prior to recycling to allow solids to settle out. ()
- ii. Dewatered sludge from backwash water clarification processes may be disposed of in a sanitary landfill in accordance with the requirements of IDAPA 58.01.06, “Solid Waste Management Rules.” Acceptance of such waste must be approved by the landfill authority. ()
- e. Radioactive Sludge.** Waste residuals containing radioactive substances, including, but not limited to granular activated carbon used for radon removal or ion-exchange regeneration waste from uranium removal, must be disposed of in accordance with IDAPA 58.01.10, “Rules Regulating the Disposal of Radioactive Materials Not Regulated Under The Atomic Energy Act of 1954, As Amended.” ()
- i. The buildup of radioactive materials such as uranium or radon and its decay products shall be considered and adequate shielding and safeguards shall be provided for operators and visitors. ()
- ii. Waste residuals containing naturally occurring radioactive materials that have been concentrated by human activities must be disposed of in an approved hazardous waste landfill (Class D), in accordance with the IDAPA 58.01.10, “Rules Regulating the Disposal of Radioactive Materials not Regulated Under the Atomic Energy Act of 1954, as Amended,” and IDAPA 58.01.06, “Solid Waste Management Rules.” ()
- iii. Waste residuals containing greater than point zero five (.05) percent by weight of uranium are subject to licensing and disposal under the regulations of the U.S. Nuclear Regulatory Commission, Region IV, 611 Ryan Plaza Drive, Suite 400, Arlington, TX 76011, Phone 817-860-8299. ()
- f. Arsenic Sludge.** Solid waste residuals containing arsenic at a concentration less than five (5) mg/l may be disposed of at a sanitary landfill if permitted under IDAPA 58.01.06, “Solid Waste Management Rules.” Solid waste containing arsenic at a concentration greater than five (5) mg/l must be disposed of at an approved hazardous waste landfill. Liquid wastes generated by arsenic treatment processes are subject to the handling and disposal requirements for liquid concentrates, as discussed under Subsection 540.02. ()

04. Spent Media. Exhausted ion exchange media, adsorption media, disposable filters, and other components of treatment processes that contain concentrated contaminants shall be disposed of in accordance with IDAPA 58.01.06, "Solid Waste Management Rules," and/or IDAPA 58.01.10, "Rules Regulating the Disposal of Radioactive Materials not Regulated Under the Atomic Energy Act of 1954, as Amended." ()

541. FACILITY AND DESIGN STANDARDS: PUMPING FACILITIES.

Pumping facilities shall be designed to maintain the sanitary quality of pumped water. ()

01. Pump Houses. Unless otherwise approved by the Department based on documentation provided by the design engineer, pump house components shall be located above-grade. The following requirements apply to pump houses as defined in Section 003 unless it can be shown that some or all of these requirements are not needed to protect the combination of system components in a given structure: ()

a. Pump houses shall be readily accessible for operation, maintenance, and repair at all times and under all weather conditions unless permitted to be out of service for a period of inaccessibility. ()

b. Pump houses shall be protected from flooding and shall be adequately drained. The ground surface shall be graded so as to lead surface drainage away from the pump house. Unless otherwise approved by the Department based on documentation provided by the design engineer, the floor surface shall be at least six (6) inches above the final ground surface and pump house components shall be located at least six (6) inches above the floor surface. ()

c. Pump houses shall be of durable construction, fire and weather resistant, and with outward-opening doors. All underground structures shall be waterproofed. ()

d. Provisions shall be made for adequate heating for the comfort of the operator and the safe and efficient operation of the equipment. In pump houses not occupied by personnel, only enough heat need be provided to prevent freezing of equipment or treatment processes. ()

e. Ventilation shall conform to existing local and/or state codes. Adequate ventilation shall be provided for all pumping stations for operator comfort and dissipation of excess heat and moisture from the equipment. In all cases, measures must be taken to minimize corrosion of metallic and electrical components. ()

f. Pump houses shall be provided with a locking door or access to prohibit unauthorized entrance and shall be protected to prevent vandalism and entrance by animals. Plans and specifications for pump houses must provide enough detail to enable the reviewing engineer to determine that the facility is secure, safe, accessible, and that it conforms to electrical and plumbing codes. ()

g. Pump houses shall be kept clean and in good repair and shall not be used to store toxic or hazardous materials other than those materials required for treatment processes. ()

h. A suitable outlet shall be provided for drainage from pump glands without discharging onto the floor. ()

i. Floor drains shall not be connected to sewers, storm drains, chlorination room drains, or any other source of contamination unless otherwise approved by the Department based on documentation provided by the design engineer. Gas chlorination room drains shall not be connected to any other drainage system and should terminate in a properly located below ground sump. Sumps for pump house floor drains shall not be closer than thirty (30) feet from any well. ()

j. Adequate space shall be provided for the installation of potential additional units and for the safe and efficient servicing of all equipment. ()

k. Suction basins shall be watertight, have floors sloped to permit removal of water and settled solids, be covered or otherwise protected against contamination, and have two (2) pumping compartments or other means to allow the suction basin to be taken out of service for inspection maintenance or repair. ()

l. Pump houses shall be designed to allow efficient equipment servicing. Crain-ways, hoist beams, eyebolts, or other adequate facilities for servicing or removal of pumps, motors or other heavy equipment shall be provided. Openings in floors, roofs or wherever else shall be provided as needed for removal of heavy or bulky equipment. ()

m. All remote controlled stations shall be electrically operated and controlled and shall have signaling apparatus of proven performance. Signaling apparatus shall report automatically when the station is out of service. ()

n. Any threaded hose bib installed in the pump house must be equipped with an appropriate backflow prevention device. ()

02. Pumping Units. At least two (2) pumping units shall be provided for raw water and surface source pumps. Pumps using seals containing mercury shall not be used in public drinking water system facilities. With any pump out of service, the remaining pump or pumps shall be capable of providing the peak hour demand of the system or a minimum of the maximum day demand plus equalization storage. See Subsection 501.18 for general design requirements concerning fire flow capacity and Subsection 501.07 regarding reliability and emergency operation. The pumping units shall meet the following requirements: ()

a. The pumps shall have ample capacity to supply the maximum demand against the required pressure without dangerous overloading. ()

b. The pumps shall be driven by prime movers able to meet the maximum horsepower condition of the pumps. ()

c. The pumps shall be provided with readily available spare parts and tools. ()

d. The pumps shall be served by control equipment that has proper heater and overload protection for air temperature encountered. ()

e. Suction lift shall be avoided if possible. When suction lift is used, it shall be within the limits allowed by the manufacturer of the pumps, and provision shall be made for priming the pumps. ()

f. Prime water must not be of lesser sanitary quality than that of the water being pumped. Means shall be provided to prevent either backpressure or backsiphonage backflow. When an air-operated ejector is used, the twenty-four (24) mesh or similar non-corrodible screened intake shall draw clean air from a point at least ten (10) feet above the ground or other source of possible contamination, unless the air is filtered by an apparatus approved by the reviewing authority. Vacuum priming may be used. ()

03. Appurtenances. The following appurtenances shall be provided for all water pumps. Additional requirements specific to well pumps are provided in Section 511. ()

a. Pumps shall be protected against freezing and valved to permit satisfactory operation, maintenance, and repair of the equipment. If foot valves are necessary, they shall have a net valve area of at least two and one-half (2.5) times the area of the suction pipe and they shall be screened. Each pump shall have an accessible check valve on the discharge side between the pump and the shut-off valve or a combination valve that performs both control valve and check valve functions. Surge relief measures shall be designed to minimize hydraulic transients. ()

b. In general, piping shall be designed so that it will have watertight joints, be protected against surge or water hammer, be provided with suitable restraints where necessary, be designed so that friction losses will be minimized, and not be subject to contamination. Each pump shall have an individual suction line or the suction lines shall be manifolded such that they will ensure similar hydraulic and operating conditions. ()

c. Each pump station shall have a standard pressure gauge on its discharge line and suction line. ()

d. Water seals shall not be supplied with water of a lesser sanitary quality than that of the water being pumped. Where pumps are sealed with potable water and are pumping water of lesser sanitary quality, the seal shall: ()

i. Be provided with either an approved reduced pressure principle backflow preventer or a break tank open to atmospheric pressure, ()

ii. Where a break tank is provided, have an air gap of at least six (6) inches or two (2) pipe diameters, whichever is greater, between the feeder line and the flood rim of the tank. ()

e. Pumps, their prime movers, and accessories shall be controlled in such a manner that they will operate at rated capacity without dangerous overload. Where two (2) or more pumps are installed, provision shall be made for alternation. Provision shall be made to prevent energizing the motor in the event of a backspin cycle. Equipment shall be provided or other arrangements made to prevent surge pressures from activating controls which switch on pumps or activate other equipment outside the normal design cycle of operation. ()

04. Booster Pumps. In addition to other applicable requirements in Section 541, booster pumps must comply with the following: ()

a. In-line booster pumps shall maintain an operating pressure that is consistent with the requirements specified in Subsection 552.01, and shall be supplied with an automatic cutoff when intake pressure is less than or equal to five (5) psi. ()

b. Booster pumps with a suction line directly connected to any storage reservoirs shall be protected by an automatic cutoff to prevent pump damage and avoid excessive reservoir drawdown. ()

c. Each booster pumping station shall contain not less than two (2) pumps with capacities such that peak hour demand, or a minimum of the maximum day demand plus equalization storage, can be satisfied with any pump out of service. See Subsection 501.18 for general design requirements concerning fire flow capacity. ()

542. FACILITY AND DESIGN STANDARDS - DISTRIBUTION SYSTEM.

01. Protection from Contamination. The distribution system shall be protected from contamination and be designed to prevent contamination by steam condensate or cooling water from engine jackets or other heat exchange devices. ()

02. Installation of Water Mains. Division 400 of "Idaho Standards for Public Works Construction," referenced in Subsection 002.02, may be used as guidance for installation of water mains. In addition, the following provisions shall apply: ()

a. Installed pipe shall be pressure tested and leakage tested in accordance with the applicable AWWA Standards, incorporated by reference into these rules at Subsection 002.01. ()

b. New, cleaned, and repaired water mains shall be disinfected in accordance with AWWA Standard C651, incorporated by reference into these rules at Subsection 002.01. The specifications shall include detailed procedures for the adequate flushing, disinfection, and microbiological testing of all water mains. ()

c. In areas where aggressive soil conditions are suspected or known to exist, analyses shall be performed to determine the actual aggressiveness of the soil. If soils are found to be aggressive, action shall be taken to protect metallic joint restraints and the water main, such as encasement in polyethylene, provision of cathodic protection, or use of corrosion resistant materials. ()

d. The Department must approve any interconnection between potable water supplies, taking into account differences in water quality between the two systems. ()

e. A continuous and uniform bedding shall be provided in the trench for all buried pipe. Backfill material shall be tamped in layers around the pipe and to a sufficient height above the pipe to adequately support and

protect the pipe. Stones found in the trench shall be removed for a depth of at least six (6) inches below the bottom of the pipe. ()

f. Water mains shall be covered with sufficient earth or other insulation to prevent freezing. ()

g. All tees, bends, plugs and hydrants shall be provided with reaction blocking, tie rods or joints designed to prevent movement. ()

03. Pressure Relief Valves. All pumps connected directly to the distribution system shall be designed in conjunction with a water pressure relief valve of type, size, and material approved by the Department unless the Department approves another method that will prevent excessive pressure development. ()

04. Flow Meter Required. Unless otherwise approved by the Department based on documentation provided by the design engineer, all source pumps and booster pumps connected directly to the distribution system shall have an instantaneous and totalizing flow meter, equipped with nonvolatile memory, installed in accordance with manufacture's specifications. ()

05. Pipe and Jointing Materials. Pipe and jointing materials comply with the standards set forth in Subsection 501.01. Pipe shall be manufactured of materials resistant internally and externally to corrosion and not imparting tastes, odors, color, or any contaminant into the system. Where distribution systems are installed in areas of ground water contaminated by organic compounds: ()

a. Pipe and joint materials which do not allow permeation of the organic compounds shall be used; and ()

b. Non-permeable materials shall be used for all portions of the system including pipe, joint materials, hydrant leads, and service connections. ()

06. Size of Water Mains. When fire hydrants are provided, they shall not be connected to water mains smaller than six (6) inches in diameter, and fire hydrants shall not be installed unless fireflow volumes are available. If fire flow is not provided, water mains shall be no less than three (3) inches in diameter. Any departure from this minimum standard shall be supported by hydraulic analysis and detailed projections of water use. ()

07. Separation of Potable, Non-Potable, and Raw Water Pipelines. The requirements for the protection of potable mains from contamination by non-potable pipelines are described in Subsections 542.07.a. through 542.07.c. For the purposes of Subsection 542.07, the term "pipeline" applies to both mains and services. The Department will use the Memorandum of Understanding with the Plumbing Bureau as guidance in determining the relative responsibilities for reviewing service lines. The conditions of Subsections 542.07.a. and 542.07.b. shall apply to all potable services constructed or reconstructed after April 15, 2007 and where the Department or the QLPE is the reviewing authority. Raw water pipelines must be protected from contamination from non-potable pipelines, and must not contaminate potable pipelines. They shall therefore meet equivalent separation distances shown below from either potable or non-potable pipelines. ()

a. Parallel installation requirements. ()

i. Potable mains in relation to non-potable mains. ()

(1) Greater than ten (10) feet separation: no additional requirements. ()

(2) Ten (10) feet to six (6) feet separation: separate trenches, with the bottom of the potable main above the top of the non-potable main, and non-potable main constructed with potable water class pipe. ()

(3) Less than six (6) feet separation: design engineer to submit data to the Department for review and approval showing that this installation will protect public health and the environment, non-potable main to be constructed of potable water class pipe, and with the bottom of the potable main above the top of the non-potable main. ()

- (4) Non-potable mains are prohibited from being located in the same trench as potable mains. ()
- (5) Pressure wastewater mains or other pressurized mains or lines containing non-potable fluids shall be no closer horizontally than ten (10) feet from potable mains. ()
 - ii. New potable services in relation to non-potable services, new potable services in relation to non-potable mains, and new non-potable services in relation to potable mains. ()
 - (1) Greater than six (6) feet separation: no additional requirements based on separation distance. ()
 - (2) Less than six (6) feet separation: design engineer to submit data that this installation will protect public health and the environment and non-potable service constructed with potable water class pipe. ()
 - (3) New potable services are prohibited from being located in the same trench as non-potable mains or non-potable services. ()
- b.** Requirements for potable water mains or services crossing non-potable water mains or services. ()
 - i. If there is eighteen (18) inches or more vertical separation with the potable water pipeline above the non-potable pipeline, then the potable pipeline joints must be as far as possible from the non-potable water pipeline. ()
 - ii. If there is eighteen (18) inches or more vertical separation with the potable water pipeline below the non-potable pipeline, then the potable pipeline joints must be as far as possible from the non-potable pipeline, and the non-potable pipeline must be supported through the crossing to prevent settling. ()
 - iii. Less than eighteen (18) inches vertical separation: ()
 - (1) Potable pipeline joint to be as far as possible from the non-potable pipeline; and either: ()
 - (a) Non-potable pipeline constructed with potable water class pipe for a minimum of ten (10) feet either side of potable pipeline with a single twenty (20) foot section of potable water class pipe centered on the crossing; or ()
 - (b) Sleeve non-potable or potable pipeline with potable water class pipe for ten (10) feet either side of crossing. Use of hydraulic cementitious materials such as concrete, controlled density fill, and concrete slurry encasement is not allowed as a substitute for sleeving. ()
 - (2) If potable pipeline is below non-potable pipeline, the non-potable pipeline must also be supported through the crossing to prevent settling. ()
 - iv. Pressure wastewater mains or other pressurized mains or lines containing non-potable fluids shall be no closer vertically than eighteen (18) inches from potable mains. ()
- c.** Existing potable services in relation to new non-potable mains, existing non-potable services in relation to new potable mains, and existing potable services in relation to new non-potable services shall meet the requirements of Subsection 542.07.b., where practical, based on cost, construction factors, and public health significance. If the Department determines that there are significant health concerns with these services, such as where a large existing service serves an apartment building or a shopping center, then the design shall conform with Subsection 542.07.b. ()

08. Separation from Subsurface Wastewater Systems and Other Sources of Contamination. A minimum horizontal distance of twenty-five (25) feet shall be maintained between any potable water pipe and a septic tank or subsurface wastewater disposal system. Guidance on separation from other potential sources of contamination, such as stormwater facilities, may be found on the DEQ website <http://www.deq.idaho.gov>.

()

09. Dead End Mains. All dead end water mains shall be equipped with a means of flushing and shall be flushed at least semiannually at a water velocity of two and one-half (2.5) feet per second. ()

a. Dead ends shall be minimized by making appropriate tie-ins whenever practical in order to provide increased reliability of service and reduce head loss. ()

b. Flushing shall be performed in such a way as to minimize any erosion of unprotected areas and, if applicable, shall be coordinated with the owner of the receiving system. No water main flushing device shall be directly connected to any sewer. ()

c. Stub outs for future main connections shall meet all requirements for dead end mains listed in Subsection 542.09 as determined by the Department. Flushing devices may be temporary in nature. ()

10. Repair of Leaks. Leaking water mains shall be repaired or replaced upon discovery and disinfected in accordance with American Water Works Association (AWWA) Standards, incorporated by reference into these rules at Subsection 002.01. ()

11. Separation from Structures. Water mains shall be separated by at least five (5) feet from buildings, industrial facilities, and other permanent structures. ()

12. Meter Vault Required. All new public water systems shall include a meter vault at each service connection. A lockable shut-off valve shall be installed in the meter vault. This requirement shall also apply to extensions of the distribution system of existing public water systems. ()

13. Minimum Pressure at Building Sites. Any public water system constructed or undergoing material modification where topographical relief may affect water pressure at the customers' premises shall provide the Department with an analysis which demonstrates that the pressure at each designated building site will be at least forty (40) psi, based on dynamic pressure in the main, as set forth in Subsections 552.01.b.i. and 552.01.b.v., plus a static compensation from the elevation of the main to the elevation of each building site. ()

a. If forty (40) psi cannot be provided at each designated building site, the Department may require that reasonable effort be made to provide notification to existing and potential customers of the expected pressure. ()

b. The Department will not authorize a service connection at any designated building site where analysis indicates that pressure will be less than twenty (20) psi static pressure (or twenty-six point five (26.5) psi for two (2) story buildings). ()

14. Isolation Valves. A sufficient number of valves shall be provided on water mains to minimize inconvenience and sanitary hazards during repairs. ()

15. Air Valves. At high points in water mains where air can accumulate, provisions shall be made to remove the air by means of air release and vacuum relief valves or combination air release/vacuum relief valves. Air release valves, vacuum relief valves, or combination air release/vacuum relief valves may not be required if vacuum relief and air release functions in the pipeline can be adequately handled by approved appurtenances such as fire hydrants. ()

a. The open end of an air valve shall be extended to at least one (1) foot above grade and provided with a twenty-four (24) mesh or similar non-corrodible screened, downward-facing elbow. When the air vent on an air relief valve cannot be practically installed above ground, the vent may be below grade provided that the valve is manually operated and the air vent is extended to the top of the valve vault and provided with a twenty-four (24) mesh or similar non-corrodible screened, downward-facing elbow. In addition, for below ground vents, the valve vault must be rated for appropriate traffic loading in traffic areas and the vault drained to daylight or provided with adequate drainage to prevent flooding of the vault. ()

b. Discharge piping from air valves or combination air release/vacuum relief valves shall not connect directly to any storm drain, storm sewer, or sanitary sewer. ()

16. Backflow Protection. Automatic air relief valves shall be equipped with a means of backflow protection. ()

17. Surface Water Crossings. For the purposes of Subsection 542.17, surface water is defined as all surface accumulations of water, natural or artificial, public or private, or parts thereof which are wholly or partially within, which flow through or border upon the state. This includes, but is not limited to, rivers, streams, canals, ditches, lakes, and ponds. Surface water crossings, whether over or under water, shall be constructed as follows: ()

a. Above water crossings: the pipe shall be adequately supported and anchored, protected from damage and freezing, and shall be accessible for repair or replacement. ()

b. Under water crossings: A minimum cover of two (2) feet shall be provided over the pipe. When crossing a water course that is greater than fifteen (15) feet in width, the following shall be provided: ()

i. The pipe shall be of special construction, having flexible, restrained, or welded water-tight joints; and ()

ii. Valves shall be provided at both ends of water crossings so that the section can be isolated for testing or repair; the valves shall be easily accessible and not subject to flooding; and ()

iii. Permanent taps or other provisions to allow insertion of a small meter to determine leakage and obtain water samples shall be made on each side of the valve closest to the supply source. ()

543. FACILITY AND DESIGN STANDARDS: CROSS CONNECTION CONTROL.

There shall be no connection between the distribution system and any pipes, pumps, hydrants, water loading stations, or tanks whereby unsafe water or other contaminating materials may be discharged or drawn into a public water system. The water purveyor is responsible through its cross connection control program to take reasonable and prudent measures to protect the water system against contamination and pollution from cross connections through premises isolation or containment, internal or in-plant isolation, fixture protection, or some combination of premises isolation, internal isolation, and fixture protection. ()

01. Testable Assemblies. All double check valve backflow prevention assemblies, reduced pressure principle backflow prevention assemblies, spill resistant vacuum breakers, and pressure vacuum breakers used must pass a performance test conducted by the University of Southern California Foundation for Cross-Connection Control and Hydraulic Research (USC Foundation) and be included on the USC Foundation "List of Approved Assemblies." ()

02. Atmospheric Vacuum Breakers. All atmospheric vacuum breakers used shall be marked approved either by the International Association of Plumbing and Mechanical Officials (IAPMO) or by the American Society of Sanitation Engineers (ASSE). ()

03. Replacement Parts and Components. All replacement parts and components, including resilient seated shutoff valves, shall meet original manufacturer's specifications or otherwise be approved by the USC Foundation as replacement parts or components for use on double check valve backflow prevention assemblies, reduced pressure principle backflow prevention assemblies, pressure vacuum breakers, and spill resistant pressure vacuum breakers. The design, material, or operational characteristics of any assembly must not be altered during maintenance or repair. ()

04. Assembly Selection. Appropriate and adequate backflow prevention assembly types for various facilities, fixtures, equipment, and uses of water should be selected from the AWWA Pacific Northwest Section Cross Connection Control Manual, the Uniform Plumbing Code, the AWWA Recommended Practice for Backflow Prevention and Cross Connection Control (M14), the USC Foundation Manual of Cross Connection Control, or other sources deemed acceptable by the Department. The selected assembly manufacturer model number must be included

on the USC Foundation “List of Approved Assemblies” and must comply with local ordinances. ()

544. FACILITY AND DESIGN STANDARDS: GENERAL DESIGN OF FINISHED WATER STORAGE.

The materials and designs used for finished water storage structures shall provide stability and durability as well as protect the quality of the stored water. Finished water storage structures shall be designed to maintain water circulation and prevent water stagnation. Steel structures and facilities such as steel tanks, standpipes, reservoirs, and elevated tanks shall be designed and constructed in accordance with applicable AWWA Standards, incorporated by reference into these rules at Subsection 002.01. Other materials of construction are acceptable when properly designed to meet the requirements of Section 544. ()

01. Sizing and Isolation Requirements. ()

a. Storage facilities shall have sufficient capacity, as determined from engineering studies that consider peak flows, fire flow capacity, and analysis of the need for various components of finished storage as defined under the term “Components of Finished Water Storage” in Section 003. The requirement for storage may be reduced when the source and treatment facilities have sufficient capacity with standby power to supply peak demands of the system. ()

b. All storage structures which provide pressure directly to the distribution system, such as elevated storage structures or ground level storage structures with associated pumping systems, shall be designed so they can be isolated and drained for cleaning or maintenance without causing a loss of pressure in the distribution system. ()

02. Location. Storage facilities shall be located in a manner that protects against contamination, ensures structural stability, protects against flooding, and provides year-round access by vehicles and equipment needed for repair and maintenance. ()

a. If the bottom elevation of a storage reservoir must be below normal ground surface, it shall be placed above the seasonal high ground water table. ()

b. Non-potable mains and services, standing water, and similar sources of possible contamination must be kept at least fifty (50) feet from any partially buried or below-ground storage structure or facility, except that non-potable mains and services constructed of potable water class pipe are allowed as close as twenty (20) feet from a partially buried or below-ground storage structure or facility. Partially buried or below-ground storage structures or facilities shall be located a minimum of fifty (50) feet from the nearest property line. ()

c. No public water supply storage tank shall be located within five hundred (500) feet of any municipal or industrial wastewater treatment plant or any land which is spray irrigated with wastewater or used for sludge disposal. ()

d. The top of a partially buried storage structure shall not be less than two (2) feet above normal ground surface. ()

e. Ground-level or above-ground storage structures or facilities shall be located a minimum of twenty (20) feet from the nearest property line and a minimum of twenty (20) feet from any potential source of contamination. ()

03. Protection from Contamination. All finished water storage structures shall have suitable watertight roofs which exclude birds, animals, insects, and excessive dust. The installation of appurtenances, such as antennas, shall be done in a manner that ensures no damage to the tank, coatings or water quality, or corrects any damage that occurred. ()

04. Protection from Trespassers. Fencing, locks on access manholes, and other necessary precautions shall be provided to prevent trespassing, vandalism, and sabotage. ()

05. Drains. No drain on a water storage structure may have a direct connection to a sewer or storm drain. The design shall allow draining the storage facility for cleaning or maintenance without causing loss of

pressure in the distribution system. ()

06. Overflow. Overflow pipes of any storage structure or facility shall discharge to daylight in a way that will preclude the possibility of backflow to the reservoir and, where practical, be provided with an expanded metal screen installed within the pipe that will exclude rodents and deter vandalism. The overflow pipe shall be of sufficient diameter to permit waste of water in excess of the filling rate. The overflow shall discharge over a drainage inlet structure or a splash plate and, when practical, discharge at an elevation between twelve (12) and twenty-four (24) inches above the receiving surface. ()

a. When an internal overflow pipe is used on above-ground tanks, it shall be located in the access tube. ()

b. The overflow for ground-level, partially buried, or below-ground storage structures or facilities shall have a vertical section of pipe at least two (2) pipe diameters in length and either: ()

i. Be screened with a twenty-four (24) mesh non-corrodible screen installed within the pipe when practical or an expanded metal screen installed within the pipe plus a weighted flapper valve or check; or ()

ii. Be an equivalent system acceptable to the Department. ()

07. Access. Finished water storage structures shall be designed with reasonably convenient access to the interior for cleaning and maintenance. At least two (2) manholes shall be provided above the waterline at each water compartment where space permits, as determined by the Department. One (1) manhole may be allowed on smaller tanks on a case-by-case basis. ()

a. The following access requirements apply to above-ground and ground-level storage structures. Each access manhole shall be framed a minimum of four (4) inches above the surface of the roof at the opening. The actual height above the surface of the roof must be sufficient to prevent incidental contamination from snow accumulation, storm water runoff or accumulation, irrigation water, or other potential sources of contamination. ()

b. The following access requirements apply to, partially buried or below-ground storage structures. Each access manhole shall be elevated a minimum of twenty-four (24) inches above the surface of the roof or the ground level, whichever is higher. The actual height above the surface of the roof or the ground level must be sufficient to prevent incidental contamination from snow accumulation, storm water runoff or accumulation, irrigation water, or other potential sources of contamination. ()

c. Each manhole shall be fitted with a solid water tight cover designed to prevent the entrance of contaminants. Each cover shall be hinged only on one (1) side and shall have a locking device. Unless otherwise approved by the Department based on documentation provided by the design engineer, each cover shall have a framed opening with the lid extending down around the frame at least two (2) inches, and the frame shall be at least four (4) inches high. ()

08. Vents. Finished water storage structures shall be vented. The overflow pipe shall not be considered a vent. Open construction between the sidewall and roof is not permissible. Vents shall: ()

a. Prevent the entrance of surface water and rainwater and extend twelve (12) inches above the roof. ()

b. Exclude birds and animals. ()

c. Exclude insects and dust, as much as this function can be made compatible with effective venting. ()

d. On ground-level, partially buried, or below-ground structures, open downward with the opening at least twenty-four (24) inches above the roof or the ground level and covered with twenty-four (24) mesh non-corrodible screen. The screen shall be installed within the pipe at a location least susceptible to vandalism. ()

e. On above-ground tanks and standpipes, open downward, and be fitted with twenty-four (24) mesh or similar non-corrodible screen. ()

09. Roof and Sidewall. The roof and sidewalls of all water storage structures must be watertight with no openings except properly constructed vents, manholes, overflows, risers, drains, pump mountings, control ports, or piping for inflow and outflow. Particular attention shall be given to the sealing of roof structures which are not integral to the tank body. ()

a. Any pipes running through the roof or sidewall of a metal storage structure must be welded, or properly gasketed. In concrete tanks, these pipes shall be connected to standard wall castings which were poured in place during the forming of the concrete. ()

b. Openings in the roof of a storage structure designed to accommodate control apparatus or pump columns shall be curbed and sleeved with proper additional shielding to prevent contamination from surface or floor drainage. ()

c. The roof of the storage structure shall be sloped to facilitate drainage. Downspout pipes shall not enter or pass through the reservoir. Parapets, or similar construction which would tend to hold water and snow on the roof, will not be approved unless adequate waterproofing and drainage are provided. ()

d. Reservoirs with pre-cast concrete roof structures must be made watertight with the use of a waterproof membrane or similar product. ()

10. Construction Materials. Materials used in storage facility construction shall meet the requirements for water contact surfaces set forth in Subsection 501.01. Porous materials such as wood or concrete block are not acceptable for use in storage construction. ()

11. Protection from Freezing. Finished water storage structures and their appurtenances, especially the riser pipes, overflows, and vents, shall be designed to prevent freezing which will interfere with proper functioning. ()

12. Internal Catwalk. Every catwalk over finished water in a storage structure shall have a solid floor with sealed raised edges, designed to prevent contamination from shoe scrapings and dirt. ()

13. Silt Stops. Removable silt stops shall be provided to prevent sediment from entering the reservoir discharge pipe. ()

14. Grading. The area surrounding a ground-level, partially buried, or below-ground structures shall be graded in a manner that will prevent surface water from standing within fifty (50) feet of it. ()

15. Coatings and Cathodic Protection. Proper protection shall be given to metal surfaces by paints or other protective coatings, by cathodic protective devices, or by both. ()

16. Disinfection. Storage facilities shall be disinfected in accordance with AWWA Standard C652, incorporated by reference into these rules at Subsection 002.01. Two (2) or more successive sets of samples, taken at twenty-four (24) hour intervals, shall indicate microbiologically satisfactory water before the facility is placed into operation. ()

17. Abandonment. All unused subsurface storage tanks shall be removed and backfilled, or abandoned by extracting residual fluids and filling the structure with sand or fine gravel. ()

545. FACILITY AND DESIGN STANDARDS: TREATMENT PLANT STORAGE FACILITIES. The design standards of Section 544 shall apply to treatment plant storage. ()

01. Filter Wash Water. Filter wash water tanks shall be sized, in conjunction with available pump units and finished water storage, to provide the backwash water required by Section 521. Consideration must be given

to the backwashing of several filters in rapid succession. ()

02. Clearwell. When finished water storage is used to provide disinfectant contact time special attention must be given to tank size and baffling. An overflow and vent shall be provided. A minimum of two (2) clearwell compartments shall be provided to allow for cleaning or maintenance. Clearwells constructed under filters may be exempt from the requirements set out in Subsection 544.02.d. when the design provides adequate protection from contamination. ()

03. Adjacent Storage. Finished or treated water must not be stored or conveyed in a compartment adjacent to untreated or partially treated water when the two (2) compartments are separated by a single wall, unless approved by the reviewing authority. ()

04. Other Treatment Plant Storage Tanks. Unless otherwise allowed by the reviewing authority, other treatment plant storage tanks/basins such as detention basins, backwash reclaim tanks, receiving basins, and pump wet-wells for finished water shall be designed as finished water storage structures. In addition, these tanks/basins shall be designed to allow for cleaning or maintenance through temporary tanks, standby pumping capabilities, or other means approved by the Department. ()

546. FACILITY AND DESIGN STANDARDS: DISTRIBUTION SYSTEM STORAGE FACILITIES.

01. Design. The applicable design standards of Section 544 shall be followed for distribution system storage. ()

02. Isolation. Finished water storage structures which provide pressure directly to the distribution system shall be designed so they can be isolated from the distribution system and drained for cleaning or maintenance without causing a loss of pressure in the distribution system. This requirement may be met through available temporary tanks, redundant pumping capabilities, or other temporary means approved by the Department. If the finished water storage structure provides fire flow for the water system, the water system owner shall provide the local fire authority advance notification of cleaning or maintenance events which isolate the structure from the distribution system and reduce available fire flow to less than the minimum required by the local fire authority. ()

03. Drain. Drains shall discharge to daylight in a way that will preclude the possibility of backflow to the reservoir and, where practical, be provided with an expanded metal screen installed within the pipe that will exclude rodents and deter vandalism. The drain shall, when practical, discharge at an elevation between twelve (12) and twenty-four (24) inches above the receiving surface, and discharge over a drainage inlet structure or a splash plate. ()

04. Level Controls. Adequate controls shall be provided to maintain levels in distribution system storage structures. Level indicating devices shall be provided at a central location. ()

547. FACILITY AND DESIGN STANDARDS: HYDROPNEUMATIC TANK SYSTEMS.

Hydropneumatic tanks use compressed air to regulate pump cycling and to absorb pressure surges (water hammer). These tanks do not provide true storage. Systems serving more than one-hundred-fifty (150) homes are generally better served by providing reservoir storage, as set forth in Sections 544, 545 and 546. ()

01. General Design of Hydropneumatic Systems. ()

a. Tanks shall be located above normal ground surface and be completely housed. ()

b. Tanks shall have bypass piping to permit operation of the system while the tank is being repaired or painted. Exterior surfaces and accessible interior surfaces shall be provided with protective coatings and shall be maintained in good condition. Supports beneath tanks shall be structurally sound. ()

c. Tanks shall be sized to limit pump cycles to not more than six (6) per hour unless a pump manufacturer's warranty specifically supports more frequent cycling. The number of pump cycles may be increased in systems with multiple pumps if a means to automatically alternate pumps is provided. The Franklin Electric AIM

manual, referenced in Subsection 002.02, Chapter 11 of the Washington State Department of Health Water System Design Manual, referenced in Subsection 002.02, or manufacturer's recommendations may be used as guidance in calculating the size of hydropneumatic tanks. ()

d. Tanks of greater than one-hundred twenty (120) gallons volume shall conform with the American Society of Mechanical Engineers (ASME) specifications code for unfired pressure vessels. Tanks of less than one hundred twenty (120) gallons volume shall meet the ASME code or be certified by a nationally recognized testing agency to be capable of withstanding twice the maximum allowable working pressure. ()

02. Requirements Specific to Conventional Hydropneumatic Tanks. Conventional tanks are those that have a direct air to water interface and require periodic air recharge to compensate for absorption of air into the water. ()

a. Each tank shall have an access manhole, a drain, and control equipment consisting of a pressure gauge, water sight glass, automatic or manual air blow-off, means for adding air that is filtered or otherwise protected from contamination, and pressure operated start-stop controls for the pumps. If tank size allows, the access manhole shall be at least twenty-four (24) inches in diameter. ()

b. The gross volume of tanks in systems served by variable speed pumps may be less than that required for systems served by constant speed pumps. Design volumes shall be approved by the Department on a site-specific basis. ()

03. Requirements Specific to Bladder Tanks. Bladder tanks have a membrane that separates air and water inside the tank. ()

a. Bladder tanks must be pre-charged with air to a pressure of five (5) psi below the setting at which the pump turns on (the low operating pressure for the system). ()

b. Each manifold assembly shall have a pressure gauge and pressure operated start-stop controls for the pumps. ()

c. The procedure for sizing bladder tanks is to determine the number of a selected size of tanks that are needed to provide pump protection. Reduced tank volume in systems served by variable speed pumps shall be approved by the Department on a site specific basis. ()

548. FACILITY AND DESIGN STANDARDS: DISINFECTION OF FACILITIES PRIOR TO USE.

Any supplier of water for a public water system shall ensure that new construction or modifications to an existing system shall be flushed and disinfected in accordance with American Water Works Association (AWWA) Standards, incorporated by reference into these rules at Subsection 002.01, prior to being placed into service. ()

549. -- 551. (RESERVED)

552. OPERATING CRITERIA FOR PUBLIC WATER SYSTEMS.

01. Quantity and Pressure Requirements. Design requirements regarding pressure analysis are found in Section 542.13. ()

a. Minimum Capacity. The capacity of a public drinking water system shall be at least eight hundred (800) gallons per day per residence. ()

i. The minimum capacity of eight hundred (800) gallons per day shall be the design maximum day demand rate exclusive of irrigation and fire flow requirements. ()

ii. The minimum capacity of eight hundred (800) gallons per day is only acceptable if the public drinking water system has equalization storage of finished water in sufficient quantity to compensate for the difference between a water system's maximum pumping capacity and peak hour demand. ()

iii. The design capacity of a public drinking water system for material modifications may be less than eight hundred (800) gallons per day per residence if the water system owner provides information that demonstrates to the Department's satisfaction the maximum day demand for the system, exclusive of irrigation and fire flows, is less than eight hundred (800) gallons per day per residence. ()

b. Pressure. All public water systems shall meet the following requirements: ()

i. Any public water system shall be capable of providing sufficient water during maximum day demand conditions, including fire flow where provided, to maintain a minimum pressure of twenty (20) psi throughout the distribution system, at ground level, as measured at the service connection or along the property line adjacent to the consumer's premises. ()

ii. Public Notification. ()

(1) During unplanned or emergency situations, when water pressure within the system is known to have fallen below twenty (20) psi, the water supplier must notify the Department, provide public notice to the affected customers within twenty-four (24) hours, and disinfect or flush the system as appropriate. When sampling and corrective procedures have been conducted and after determination by the Department that the water is safe, the water supplier may re-notify the affected customers that the water is safe for consumption. The water supplier shall notify the affected customers if the water is not safe for consumption. ()

(2) During planned maintenance or repair situations, when water pressure within the system is expected to fall below twenty (20) psi, the water supplier must provide public notice to the affected customers prior to the planned maintenance or repair activity and shall ensure that the water is safe for consumption. ()

iii. If an initial investigation by the water supplier fails to discover the causes of inadequate or excessive pressure, the Department may require the water supplier to conduct a local pressure monitoring study to diagnose and correct pressure problems. Compliance with these requirements by water systems that do not have a meter vault or other point of access at the service connection or along the property line adjacent to the consumer's premises where pressure in the distribution system can be reliably measured shall be determined by measurements within the consumer's premises, or at another representative location acceptable to the Department. ()

iv. Copies of pressure monitoring study reports required under Subsection 552.01.b.iii. detailing study results and any resulting corrective actions planned or performed by the public water system shall be submitted to the Department in accordance with these rules. ()

v. The following public water systems or service areas of public water systems shall maintain a minimum pressure of forty (40) psi throughout the distribution system, during peak hour demand conditions, excluding fire flow, measured at the service connection or along the property line adjacent to the consumer's premises. ()

(1) Any public water system constructed or substantially modified after July 1, 1985. ()

(2) Any new service areas. ()

(3) Any public water system that is undergoing material modification where it is feasible to meet the pressure requirements as part of the material modification. ()

vi. Any public water system shall keep static pressure within the distribution system below one hundred (100) psi and should ordinarily keep static pressure below eighty (80) psi. Pressures above one hundred (100) psi shall be controlled by pressure reducing valve stations installed in the distribution main. In areas where failure of installed pressure reducing valve stations would result in extremely high pressure, pressure relief valves may be required. The Department may approve the use of pressure reducing devices at individual service connections on a case by case basis, if it can be demonstrated that higher pressures in portions of the distribution system are required for efficient system operation. If system modification will cause pressure to routinely exceed eighty (80) psi, or if a check valve or an individual pressure reducing device is added to the service line, the water system owner shall notify affected customers. Notification may include reasons for the elevated pressure, problems or damage that

elevated pressure can inflict on appliances or plumbing systems, and suggested procedures or mitigation efforts affected property owners may initiate to minimize problems or damage. ()

vii. The Department may allow the installation of booster pump systems at individual service connections on a case by case basis. However, such an installation may only occur with the full knowledge and agreement of the public water system, including assurance by the water system that the individual booster pump will cause no adverse effects on system operation. ()

viii. For elevated storage tanks, pressure calculations during peak hour demand shall be based on the lowest water level after both operational storage and equalization storage have been exhausted. Pressure calculations during fire flow demands shall be based on the lowest water level after operational storage, equalization storage, and fire suppression storage have been exhausted. ()

ix. For hydropneumatic tanks, pressure calculations shall be based on the lowest pressure of the pressure cycle and this requirement shall be noted in the operation and maintenance manual. ()

c. Fire Flows. Any public water system designed to provide fire flows shall ensure that such flows are compatible with the water demand of existing and planned fire-fighting equipment and fire fighting practices in the area served by the system. ()

d. Irrigation Flows. ()

i. Any public water system constructed after November 1, 1977, shall be capable of providing water for uncontrolled, simultaneous foreseeable irrigation demand, which shall include all acreage that the system is designed to irrigate. ()

(1) The Department must concur with assumptions regarding the acreage to be irrigated. In general, an assumption that no outside watering will occur is considered unsound and is unlikely to be approved. ()

(2) An assumption of minimal outside watering, as in recreational subdivisions, may be acceptable if design flows are adequate for maintenance of "green zones" for protection against wildland fire. ()

ii. The requirement of Subsection 552.01.d.i. may be modified by the Department if: ()

(1) A separate irrigation system is provided; or ()

(2) The supplier of water can regulate the rate of irrigation through its police powers, and the water system is designed to accommodate a regulated rate of irrigation flow. The Department may require the water system to submit a legal opinion addressing the enforceability of such police powers. ()

iii. If a separate non-potable irrigation system is provided for the consumers, all mains, hydrants and appurtenances shall be easily identified as non-potable. The Department must concur with a plan to ensure that each new potable water service is not cross-connected with the irrigation system. ()

02. Ground Water. ()

a. Public water systems constructed after July 1, 1985, and supplied by ground water, shall treat water within the system by disinfection if the ground water source is not protected from contamination. ()

b. The Department may, in its discretion, require disinfection for any existing public water system supplied by ground water if the system has repeated coliform present samples or E.coli MCL exceedances, and if the system does not appear adequately protected from contamination. Adequate protection will be determined based upon at least the following factors: ()

i. Location of possible sources of contamination; ()

ii. Size of the well lot; ()

- iii. Depth of the source of water; ()
- iv. Bacteriological quality of the aquifer; ()
- v. Geological characteristics of the area; and ()
- vi. Adequacy of development of the source. ()

03. Operating Criteria. The operating criteria for systems that provide filtration shall be as follows: ()

a. A project specific operation and maintenance manual shall be provided as required in Subsection 501.12. See definition of Operation and Maintenance Manual in Section 003 for the typical contents of an operation and maintenance manual and the included operations plan. For the operations plan in the operation and maintenance manual, additional guidance for several types of filtration systems can be found in the Department's SWTR Compliance Guidance referenced in Subsection 002.02. ()

b. The system shall conduct monitoring specified by the Department before serving water to the public in order to protect the health of consumers served by the system. ()

c. New treatment facilities shall be operated in accordance with Subsection 552.03.a., and the system shall conduct monitoring specified by the Department for a trial period specified by the Department before serving water to the public in order to protect the health of consumers served by the system. ()

04. Chlorination. Systems that regularly add chlorine to their water are subject to the provisions of Section 320. Systems using surface water or ground water under the direct influence of surface water, are subject to the disinfection requirements of Sections 300 and 518. ()

a. Systems using only ground water that add chlorine for the purpose of disinfection, as defined in Section 003, are subject to the following requirements: ()

i. Chlorinator and chlorine contact tank capacity shall be such that the system is able to demonstrate that it is routinely achieving four (4) logs (ninety-nine point ninety-nine percent) (99.99%) inactivation/removal of viruses. The required effective contact time will be specified by the Department. This condition must be attainable even when the plant design capacity coincides with anticipated maximum chlorine demands. ()

ii. A detectable chlorine residual shall be maintained throughout the distribution system. ()

iii. Automatic proportioning chlorinators are required where the rate of flow or chlorine demand is not reasonably constant. ()

iv. Analysis for free chlorine residual shall be conducted at a location at or prior to the first service connection at least daily and records of these analyses shall be kept by the supplier of water for at least one (1) year. A report of all daily chlorine residual measurements for each calendar month shall be submitted to the Department no later than the tenth day of the following month. The frequency of measuring free chlorine residuals shall be sufficient to detect variations in chlorine demand or changes in water flow. ()

v. If gas chlorination equipment is provided, a separate and ventilated room is required. ()

vi. The Department may, in its discretion, require a treatment rate higher than that specified in Subsection 552.04.a.i. ()

vii. When chlorine gas is used, chlorine leak detection devices and safety equipment shall be provided and equipped with both an audible alarm and a warning light. ()

viii. The Department may require redundant chlorine pumping capabilities with automatic switchover

for systems with documented source water contamination problems and that lack adequate storage to supply the system during a pump failure. ()

b. Systems using only ground water that add chlorine for the purpose of maintaining a disinfectant residual in the distribution system, when the source(s) is not at risk of microbial contamination, are subject to the following requirements: ()

i. Automatic proportioning chlorinators are required where the rate of flow or chlorine demand is not reasonably constant. ()

ii. Analysis for free chlorine residual shall be made at a frequency that is sufficient to detect variations in chlorine demand or changes in water flow. ()

c. Systems using only ground water that add chlorine for other purposes, such as oxidation of metals or taste and odor control, when the source(s) is known to be free of microbial contamination, must ensure that chlorine residual entering the distribution system after treatment is less than four (4.0) mg/L. The requirements in Subsection 552.04.b.ii. also apply if the system maintains a chlorine residual in the distribution system. ()

05. Fluoridation. ()

a. Commercial sodium fluoride, sodium silico fluoride and hydrofluosilicic acid which conform to the applicable American Water Works Association (AWWA) Standards, incorporated by reference into these rules at Subsection 002.01, are acceptable. Use of other chemicals shall be specifically approved by the Department. ()

b. Fluoride compounds shall be stored in covered or unopened shipping containers. ()

c. Provisions shall be made to minimize the quantity of fluoride dust. Empty bags, drums, or barrels shall be disposed of in a manner that will minimize exposure to fluoride dusts. ()

d. Daily records of flow and amounts of fluoride added shall be kept. An analysis for fluoride in finished water shall be made at least weekly. Records of these analyses shall be kept by the supplier of water for five (5) years. ()

06. Cross Connection Control Program - Community Water Systems. The water purveyor is responsible through its cross connection control program to take reasonable and prudent measures to protect the water system against contamination and pollution from cross connections through premises isolation, internal or in-plant isolation, fixture protection, or some combination of premises isolation, internal isolation, and fixture protection. Pursuant to Section 543, all suppliers of water for community water systems shall implement a cross connection control program to prevent the entrance to the system of materials known to be toxic or hazardous. The water purveyor is responsible to enforce the system's cross connection control program. The program will at a minimum include: ()

a. An inspection program to locate cross connections and determine required suitable protection. For new connections, suitable protection must be installed prior to providing water service. ()

b. Required installation and operation of adequate backflow prevention assemblies. Appropriate and adequate backflow prevention assembly types for various facilities, fixtures, equipment, and uses of water should be selected from the AWWA Pacific Northwest Section Cross Connection Control Manual, the Uniform Plumbing Code, the AWWA Recommended Practice for Backflow Prevention and Cross Connection Control (M14), the USC Foundation Manual of Cross Connection Control, or other sources deemed acceptable by the Department. The assemblies must meet the requirements of Section 543 and comply with local ordinances. ()

c. Annual inspections and testing of all installed backflow prevention assemblies by a tester licensed by a licensing authority recognized by the Department. Testing shall be done in accordance with the test procedures published by the University of Southern California Foundation for Cross-Connection Control and Hydraulic Research. See the USC Foundation Manual of Cross-Connection Control referenced in Subsection 002.02. ()

d. Discontinuance of service to any structure, facility, or premises where suitable backflow protection has not been provided for a cross connection. ()

e. Assemblies that cannot pass annual tests or those found to be defective shall be repaired, replaced, or isolated within ten (10) business days. If the failed assembly cannot be repaired, replaced, or isolated within ten (10) business days, water service to the failed assembly shall be discontinued. ()

07. Cross Connection Control - Non-Community Water Systems. All suppliers of water for non-community water systems shall ensure that cross connections do not exist or are isolated from the potable water system by an approved backflow prevention assembly. Backflow prevention assemblies shall be inspected and tested annually for functionality by an Idaho licensed tester, as specified in Subsections 552.06.c. and 552.06.e. ()

08. Start-up Procedures For Seasonal Systems Subject To Subsections 100.01.a., c., and d. ()

a. All seasonal system owners and operators must demonstrate completion of a Department approved start-up procedure, including start-up sampling, prior to serving water to the public. The system owner or operator must submit information on a Department provided or approved form that includes a statement certifying that the system owner or operator followed proper start-up procedures. The form shall be submitted to the Department within 30 (thirty) days following the system's start-up date. ()

b. The Department may exempt any seasonal system from Subsection 552.08.a. if the entire distribution system remains pressurized during the entire period that the system is not operating, except that the systems that monitor less frequently than monthly must still monitor during the vulnerable period designated by the Department. The Department may exempt a seasonal system from Subsection 552.08.a. if the owner or operator of the system meets all of the following conditions: ()

- i.** Requests an exemption in writing to the Department for approval; ()
- ii.** Demonstrates a clean compliance history as defined in Section 003 for a minimum of five (5) years; ()
- iii.** Has no uncorrected significant deficiencies from the most recent sanitary survey; and ()
- iv.** Total coliform samples submitted to a certified laboratory within 30 (thirty) days prior to serving water to the public demonstrate the absence of total coliform. ()

553. CLASSIFICATION OF WATER SYSTEMS.

01. System Classification Required. The Department shall classify community, nontransient noncommunity, and surface water systems based on indicators of potential health risks. ()

a. The owner or designee of every community and nontransient noncommunity public water system shall submit proof of the current conditions related to the classification of the system every five (5) years or more frequently if required by the Department. ()

b. The owner or designee of all surface water systems shall submit proof of the current conditions related to the classification of the system every five (5) years or more frequently if required by the Department. ()

02. Classification Criteria. Systems shall be classified under a system that uses the following criteria: ()

- a.** Complexity, size, and type of source water for treatment facilities. ()
- b.** Complexity and size of distribution systems. ()

- c. Other criteria deemed necessary to completely classify systems. ()
- d. The Department shall develop guidelines for applying the criteria set forth in Section 553. ()

554. LICENSE REQUIREMENTS.

01. Licensed Operator Required. ()

a. Owners of all community and nontransient noncommunity public drinking water systems must place the direct supervision of their drinking water system, including each treatment facility and distribution system, under the responsible charge of a properly licensed operator. ()

b. Owners of all surface water systems must place the direct supervision of their public drinking water system under the responsible charge of a properly licensed operator. ()

02. Responsible Charge Operator License Requirement. An operator in responsible charge of a public drinking water system must hold a valid license equal to or greater than the classification of the public water system where the responsible charge operator is in responsible charge. Responsible charge means active, daily on-site or on-call responsibility for the performance of operations or active, on-going, on-site, or on-call direction of employees and assistants. ()

03. Substitute Responsible Charge Operator License Requirement. At such times as the responsible charge operator is not available, a substitute responsible charge operator shall be designated to replace the responsible charge operator. A substitute responsible charge operator of a public water system must hold a valid license equal to or greater than the classification of the public water system where the substitute responsible charge operator is in responsible charge. ()

04. Shift Operator Requirement. Any public drinking water system subject to these requirements with multiple operating shifts must have a designated properly licensed operator available for each operating shift. An on-duty designated shift operator does not replace the requirements in Subsections 554.01 and 554.03 for responsible charge operator coverage during all operating shifts. ()

05. Water Operator License Requirement. All operating personnel at public drinking water systems subject to these requirements making process control/ system integrity decisions about water quality or quantity that affect public health must hold a valid and current license. ()

555. -- 559. (RESERVED)

560. CONTRACTING FOR SERVICES.

Public water systems may contract with persons to provide responsible charge operators and substitute responsible charge operators. Proof of such contract shall be submitted to the Department prior to the contracted person performing any services at the public water system. ()

561. -- 562. (RESERVED)

563. ADVISORY GROUP.

Stakeholder Involvement. Ongoing stakeholder involvement will be provided through the existing drinking water advisory committee at the Department. ()

564. -- 899. (RESERVED)

900. TABLES.

01. Table 1 -- Minimum Distances From a Public Water System Well.

Minimum Distances from a Public Water System Well	
Gravity wastewater line	50 feet
Any potential source of contamination	50 feet
Pressure wastewater line	100 feet
Class A Municipal Reclaimed Wastewater Pressure distribution line	50 feet
Individual home septic tank	100 feet
Individual home disposal field	100 feet
Individual home seepage pit	100 feet
Privies	100 feet
Livestock	50 feet
Drainfield - standard subsurface disposal module	100 feet
Absorption module - large soil absorption system	150 - 300 feet, see IDAPA 58.01.03
Canals, streams, ditches, lakes, ponds and tanks used to store non-potable substances	50 feet
Storm water facilities disposing storm water originating off the well lot	50 feet
Municipal or industrial wastewater treatment plant	500 feet
Reclamation and reuse of municipal and industrial wastewater sites	See IDAPA 58.01.17
Biosolids application site	1,000 feet

901. -- 999. (RESERVED)

58.01.09 – RULES REGULATING SWINE FACILITIES

000. LEGAL AUTHORITY.

The Idaho Legislature has given the Idaho Board of Environmental Quality the authority to promulgate Rules Regulating Swine Facilities pursuant to Sections 39-104A, 39-105, and 39-107, Idaho Code. ()

001. TITLE AND SCOPE.

01. Title. These rules are titled IDAPA 58.01.09, “Rules Regulating Swine Facilities.” ()

02. Scope. These rules establish the procedures and requirements for the issuance of a permit to construct, operate, close or expand swine facilities of a defined capacity. The intent of these rules is to ensure animal waste from swine facilities are properly controlled so as not to adversely affect public health or the environment. ()

002. WRITTEN INTERPRETATIONS.

As described in Section 67-5201(19)(b)(iv), Idaho Code, the Department of Environmental Quality may have written statements which pertain to the interpretation of these rules. If available, such written statements can be inspected and copied at cost at the Department of Environmental Quality, 1410 N. Hilton, Boise, Idaho 83706-1255. ()

003. ADMINISTRATIVE APPEALS.

Persons may be entitled to appeal agency actions authorized under these rules pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure Before the Board of Environmental Quality.” ()

004. -- 009. (RESERVED)

010. DEFINITIONS.

01. Animal Unit. An animal unit equals two and a half (2.5) swine, each weighing over twenty-five (25) kilograms (approximately fifty-five (55) pounds), or ten (10) weaned swine, each weighing under twenty-five (25) kilograms. Total animal units are calculated by adding the number of swine weighing over twenty-five (25) kilograms multiplied by four-tenths (.4) plus the number of weaned swine weighing under twenty-five (25) kilograms multiplied by one-tenth (.1). ()

02. Animal Waste. Animal excrement, feed wastes, process wastewater or any other waste associated with the confinement of swine. ()

03. Animal Waste Management System. Any structure or system that provides for the collection, treatment, disposal, distribution, or storage of animal waste. ()

04. Certified Planner. A person who has completed the nutrient management certification in accordance with the Nutrient Management Standard. ()

05. Department. The Idaho Department of Environmental Quality. ()

06. Director. The Director of the Department of Environmental Quality or his designee. ()

07. Existing Facility. A facility built and in operation one (1) year or more prior to the original effective date of these rules. ()

08. Expanding Facility. A swine facility of less than two thousand (2,000) animal units that increases its one-time animal unit capacity to two thousand (2,000) or more animal units or an existing facility that increases its one-time animal unit capacity by ten percent (10%). ()

09. Facility or Swine Facility. Any place, site or location or part thereof where swine are kept, handled, housed, or otherwise maintained and includes but is not limited to buildings, lots, pens, and animal waste management system, and which has the one-time animal unit capacity of two thousand (2000) or more animal units. ()

10. Land Application. The spreading on or incorporation of animal waste into the soil mantle primarily for beneficial purposes. ()

11. Nutrient Management Plan. A plan prepared in compliance with the Nutrient Management

Standard or other equally protective standard approved by the Director for managing the amount, source, placement, form, and timing of the land application of nutrients and soil amendments for plant production and to minimize the potential for environmental degradation, particularly impairment of water quality. ()

12. Nutrient Management Standard. The United States Department of Agriculture-Natural Resource Conservation Service Code 590 or the Idaho Agricultural Pollution Abatement Plan-Nutrient Management Standard Component Practice. ()

13. One-Time Animal Unit Capacity. The maximum number of animal units that a facility is capable of housing at any given point in time. ()

14. Operate. Confine, feed, propagate, house, or otherwise sustain swine. ()

15. Permit. A written authorization by the Director to construct, operate, or expand a swine facility. ()

16. Permittee. The person in whose name a permit is issued. ()

17. Person. Any individual, association, partnership, firm, joint stock company, joint venture, trust, political subdivision, public or private corporation, state or federal governmental department, agency or instrumentality, or any legal entity which is recognized by law as the subject of rights and duties. ()

18. Process Wastewater. Any water used in the facility that comes into contact with any manure, litter, bedding, raw, intermediate, or final material or product used in or resulting from the production of swine and any products directly or indirectly used in the operation of a facility, such as spillage or overflow from animal watering systems; washing, cleaning, or flushing pens, barns, manure pits, or spray cooling of animals; and dust control and any precipitation which comes into contact with animals or animal waste. ()

19. Unauthorized Discharge. A release of animal waste to the environment or waters of the state that is not authorized by the permit or the terms of an NPDES permit issued by the federal EPA. ()

20. Waters of the State. All the accumulations of water, surface and underground, natural and artificial, public and private, or parts thereof which are wholly or partially within, which flow through or border upon the state. ()

011. -- 099. (RESERVED)

100. APPLICABILITY.

01. Permit Required. No person shall construct, operate, or expand a regulated swine facility without first obtaining a permit issued by the Director as provided in these rules. ()

02. Regulated Facilities. New swine facilities having a one-time animal unit capacity of two thousand (2,000) or more animal units and expanding facilities are required to be permitted as provided in these rules. ()

03. Common Control. Two (2) or more swine facilities under common control of the same person may be considered, for purposes of permitting, to be a single facility, even though separately their capacity is less than two thousand (2,000) animal units, if they use a common animal waste management system or land application site. ()

04. Existing Swine Facilities. Those swine facilities built and in operation one (1) year or more prior to the original effective date of these rules are exempt from the requirements of these rules except as provided in Section 210. ()

101. -- 199. (RESERVED)

200. PERMIT APPLICATION.

01. Permit Application. Every person requiring a permit under these rules shall submit a permit application to the Department. A permit application will be used to determine if the construction, operation, and closure of a swine facility will be in conformance with these and other applicable rules. ()

02. Preapplication Conference. Prospective applicants are encouraged to meet with the Department to discuss application requirements and procedures. ()

03. Contents of Application. Each application shall include, in the format set forth by the Director and when determined applicable by the Director, the following information in Subsections 200.04 through 200.08 in sufficient detail to allow the Director to make necessary application review decisions concerning design, environmental protection and public health. ()

04. Relevant Information. ()

a. Name, mailing address and phone number of the facility owner. ()

b. Name, mailing address and phone number of the facility operator. ()

c. Name and mailing address of the facility. ()

d. Legal description of the facility location. ()

e. The legal structure of the entity owning the facility, including the names and addresses of all directors, officers, registered agents and partners. ()

f. The names and locations of all swine facilities owned and/or operated by the applicant within the last ten (10) years. ()

g. The one-time animal unit capacity of the facility. ()

h. The type of animals to be confined at the facility. ()

i. Evidence that a valid water right exists to supply adequate water for the proposed facility or a copy of either an application for permit to appropriate water or an application to change the point of diversion, place, period and nature of use of an existing water right that has been filed with the Idaho Department of Water Resources which, if approved, will supply adequate water for the proposed operation. ()

j. Proof of financial capability to perform remedial actions and to meet the conditions of an approved closure plan for a facility. The mechanism used to demonstrate financial capability must be legally valid, binding and enforceable under applicable law and must insure that the funds necessary to meet the costs of remediation and closure will be available whenever they are needed in accordance with Section 205. The mechanisms include, but are not limited to, trust funds, surety bonds, letters of credit, insurance and corporate guarantees. ()

k. The facility's biosecurity and sanitary standards. ()

l. A statement of estimated annual income and operating expenses that demonstrate, to the satisfaction of the Department, financial capability to operate the facility. ()

05. Construction Plan. Plans and specifications for the facility's animal waste management system that include the following information: ()

a. Vicinity map(s) prepared on one (1) or more seven and one-half minute (7.5') USGS topographic quadrangle maps or a high quality reproduction(s) that includes the following: ()

i. Layout of the facility, including buildings and animal waste management system; ()

ii. The one hundred (100) year FEMA flood zones or other appropriate flood data for the facility site and land application sites owned or leased by the applicant; ()

iii. The location of occupied dwellings, public and private gathering places, such as schools, churches and parks, and incorporated municipalities which are within a two (2) mile radius of the facility; and ()

iv. Private and community domestic water wells, irrigation wells, irrigation conveyance and drainage structures, monitoring wells, wetlands, streams, springs, and reservoirs which are within a one (1) mile radius of the facility. ()

b. Facility construction specifications including: ()

i. A site plan showing: ()

(1) Building locations; ()

(2) Waste facilities; ()

(3) All waste conveyance systems; and ()

(4) All irrigation systems used for land application, including details of approved water supply protection devices. ()

ii. Building plans showing: ()

(1) All wastewater collection systems in housed units; ()

(2) All freshwater supply systems, including details of approved water supply protection devices; ()

and (3) Detailed drawings of wastewater collection and conveyance systems and containment construction; ()

(4) Detailed construction and installation procedures. ()

06. Site Characterization. A characterization of the facility and any land application site(s) owned or operated by the applicant, prepared by a registered professional geologist, a registered professional engineer or a qualified ground water hydrologist, that includes the following information: ()

a. A description of monitoring methods, frequency, and reporting components related to either leak detection systems and/or ground water monitoring wells; ()

b. The climatic, hydrogeologic, and soil characteristics; ()

c. The depth to water and a potentiometric map for the uppermost and regional aquifer; ()

d. The vertical and horizontal conductivity, gradient, and ground water flow direction and velocity; ()

e. Estimates of recharge to the uppermost aquifer; ()

f. Information which characterizes the relationship between the ground water and adjacent surface waters; and ()

g. A summary of local ground water quality data. ()

07. Nutrient Management Plan. A plan prepared by a Certified Planner demonstrating compliance

with the Nutrient Management Standard for land application. ()

08. Closure Plan. A plan describing the procedures for final closure of a facility that ensures no adverse impacts to the environment and waters of the state and that includes: ()

a. The estimated length of operation of the facility; and ()

b. A description of the procedures, methods, and schedule to be implemented at the facility for final disposal, handling, management and/or treatment of all animal waste. ()

09. Other Information. An applicant shall provide any other information relative to Subsections 200.04 through 200.08 deemed necessary by the Director to assess protection of human health and the environment ()

10. Application Fee. A fee shall be submitted with each permit application as follows: ()

a. Three thousand dollars (\$3,000) for facilities that have a one-time animal unit capacity of less than five-thousand (5,000) animal units; ()

b. Five thousand dollars (\$5,000) for facilities that have a one-time animal unit capacity of five thousand to ten thousand (5,000-10,000) animal units; and ()

c. Ten thousand dollars (\$10,000) for facilities that have a one-time animal unit capacity over ten thousand (10,000) animal units. ()

201. -- 204. (RESERVED)

205. FINANCIAL ASSURANCE REQUIREMENTS.

01. Written Estimate of Costs. The owner of a swine facility shall submit, as part of the permit application, a detailed written estimate, in current dollars, of the cost of hiring a third party to: ()

a. Remediate potential contamination caused by the operation of the facility or of any potential spill or breach, including, without limitation, remediation pursuant to the facility's Spill Contingency Plan; and ()

b. Close the facility in accordance with an approved closure plan. ()

c. The Department must approve the cost estimate as reasonable prior to the issuance of a permit. ()

02. Financial Assurance Mechanisms. The owner shall submit as part of the permit application evidence of financial assurance to cover the approved remediation and closure cost estimates. However, if the Department has determined, prior to October 19, 2000, that a complete application has been submitted, the owner shall submit the remediation and closure cost estimates and financial assurance mechanism to the Department for approval prior to the issuance of a permit. The mechanism used to demonstrate financial assurance shall be submitted to the Department for approval and shall ensure that the funds necessary to meet the approved costs of remediation and closure will be available whenever they are needed. The financial assurance mechanisms allowed for swine facilities shall include any mechanism or a combination of mechanisms meeting the criteria set forth below or other mechanism approved by the Department. ()

a. Trust Fund. ()

i. An owner may satisfy the requirements of Subsection 205.02 by establishing a trust fund and submitting an originally signed duplicate of the trust agreement to the Department. The trustee must be an entity which has the authority to act as a trustee and whose trust operations are regulated and examined by a federal or state agency. ()

ii. After the trust fund is established, whenever the current remediation and closure cost estimates change, the owner must compare the new estimates with the trustee's most recent annual valuation of the trust fund. If the value of the fund is less than the amount of the new estimate, the owner, within sixty (60) days after the change in the cost estimate, must either deposit an amount equal into the fund so that its value after this deposit at least equals the amount of the current remediation or closure cost estimate, or obtain other financial assurance as specified in Subsection 205.02 to cover the difference. ()

iii. If the value of the trust fund is greater than the total amount of the current remediation or closure cost estimate, the owner may submit a written request to the Department for release of the amount in excess of the current remediation or closure cost estimate. ()

iv. If an owner substitutes other financial assurance as specified in Subsection 205.02 for all or part of the trust fund, he may submit a written request to the Department for release of the amount in excess of the current remediation or closure cost estimate covered by the trust fund. ()

b. Surety Bond. ()

i. An owner may satisfy the requirements of Subsection 205.02 by obtaining a payment or performance surety bond and submitting a certified copy of the bond to the Department. The surety company issuing the bond must, at a minimum, be among those listed as acceptable sureties on federal bonds in Circular 570 of the U.S. Department of the Treasury. ()

ii. The penal sum of the bond must be in an amount at least equal to the current remediation and closure cost estimates. ()

iii. Under the terms of the bond, the surety will become liable on the bond obligation when: ()

(1) The owner fails to perform as guaranteed by the bond; or ()

(2) The Department notifies the owner that he has failed to meet requirements of these rules. ()

iv. Under the terms of the bond, the surety may cancel the bond by sending notice of cancellation by certified mail to the owner and the Department one hundred twenty (120) days in advance of cancellation. Cancellation may not occur, however, during the one hundred twenty (120) days beginning with the date of receipt of the notice by the Department, as evidenced by the return receipt. The surety shall remain liable on the bond for costs of remediation and closure unless the owner obtains a replacement financial assurance mechanism, approved by the Department in accordance with Subsection 205.02.f., that covers both the existing and future costs of remediation and closure. ()

c. Letter of Credit. ()

i. An owner may satisfy the requirements of Subsection 205.02 by obtaining an irrevocable standby letter of credit and submitting a certified copy of the letter to the Department. The issuing institution must be an entity which has the authority to issue letters of credit and whose letter-of-credit operations are regulated and examined by a federal or state agency. ()

ii. The letter of credit must be accompanied by a letter from the owner referring to the letter of credit by number, issuing institution, and date, and providing the following information: the type of facility, name and address of the facility, and the amount of funds assured for remediation and closure of the facility by the letter of credit. ()

iii. The letter of credit must be irrevocable and issued for a period of at least one (1) year. The letter of credit must provide that the expiration date will be automatically extended for a period of at least one (1) year unless, at least one hundred twenty (120) days before the current expiration date, the issuing institution notifies both the owner and the Department by certified mail of a decision not to extend the expiration date. Cancellation may not occur, however, during the one hundred twenty (120) days beginning with the date of receipt of the notice by the Department, as evidenced by the return receipt. The issuing institution shall remain liable on the letter of credit for

costs of remediation and closure unless the owner obtains a replacement financial assurance mechanism, approved by the Department in accordance with Subsection 205.02.f., that covers both the existing and future costs of remediation and closure. ()

iv. The letter of credit must be issued in an amount at least equal to the current remediation and closure cost estimates. ()

d. Insurance. ()

i. An owner may satisfy the requirements of Subsection 205.02 by obtaining remediation and closure insurance and submitting a certificate of such insurance to the Department. At a minimum, the insurer must be licensed to transact the business of insurance, or eligible to provide insurance as an excess or surplus lines insurer, in one (1) or more states. ()

ii. The insurance policy must be issued for a face amount at least equal to the current remediation and closure cost estimates. The term “face amount” means the total amount the insurer is obligated to pay under the policy. Actual payments by the insurer will not change the face amount, although the insurer’s future liability will be lowered by the amount of the payments. ()

iii. Each insurance policy must contain a provision allowing assignment of the policy to a successor. Such assignment may be conditional upon consent of the insurer, provided such consent is not unreasonably refused. ()

iv. The automatic renewal of the policy must, at a minimum, provide the insured with the option of renewal at the face amount of the expiring policy. The insurer may cancel the policy by sending notice by certified mail to the owner and the Department one hundred twenty (120) days in advance. Cancellation may not occur, however, during the one hundred twenty (120) days beginning with the date of receipt of the notice by the Department, as evidenced by the return receipt. The insurer shall remain liable on the policy for costs of remediation and closure unless the owner obtains a replacement financial assurance mechanism, approved by the Department in accordance with Subsection 205.02.f., that covers both the existing and future costs of remediation and closure. ()

e. Corporate Guarantee. ()

i. An owner may satisfy the requirements of Subsection 205.02 by obtaining a written guarantee and submitting a certified copy of the guarantee and appropriate letter from the guarantor. The guarantor must be the direct or higher-tier parent corporation of the owner, a firm whose parent corporation is also the parent corporation of the owner, or a firm with a “substantial business relationship” with the owner. ()

ii. If the guarantor’s parent company is also the parent corporation of the owner, a letter from the guarantor’s chief financial officer must describe the value received in consideration of the guarantee. ()

iii. If the guarantor is a firm with a “substantial business relationship” with the owner, the letter must describe the “substantial business relationship” and the value received in consideration of the guarantee. ()

iv. The terms of the guarantee shall provide that if the owner fails to perform remediation or closure of a facility covered by the guarantee, the guarantor will: ()

(1) Perform, or pay a third party to perform, remediation and closure as required (performance guarantee); or ()

(2) Establish a fully funded trust fund as specified in Subsection 205.02.a. in the name of the owner (payment guarantee). ()

v. The guarantee shall remain in force for as long as the owner must comply with the applicable financial assurance requirements of Subsection 205.02 unless the guarantor sends notice of cancellation by certified mail to the owner and to the Department one hundred twenty (120) days in advance. Cancellation may not occur,

however, during the one hundred twenty (120) days beginning on the date of receipt of the notice by the Department, as evidenced by the return receipt. The guarantor shall remain liable on the guarantee for costs of remediation and closure unless the owner obtains a replacement financial assurance mechanism, approved by the Department in accordance with Subsection 205.02.f., that covers both the existing and future costs of remediation and closure. ()

f. If a financial assurance mechanism is cancelled by the issuing entity, the owner shall obtain alternate financial assurance, within sixty (60) days of receipt of notice of cancellation by the Department, which shall be submitted to the Department for approval. The alternate financial assurance must become effective not later than the effective date of cancellation or termination of the existing financial assurance. An owner may only cancel a financial assurance mechanism after first obtaining an alternative mechanism approved by the Department. ()

03. Continuous Coverage. The owner shall provide continuous coverage for remediation and closure until released from financial assurance requirements by the Department. ()

04. Adjustment of Financial Assurance Amounts. The following provisions apply to the adjustment of the amount of financial assurance: ()

a. The owner shall increase the remediation and closure cost estimates and the amount of financial assurance if changes to the closure plan or facility conditions or operations increase the cost estimates at any time during the active life of the facility. The cost estimates and financial assurance shall also be adjusted to reflect inflation. Increased cost estimates and financial assurance shall be submitted to the Department for approval. ()

b. The owner may reduce the remediation and closure cost estimates and the amount of financial assurance if the cost estimates exceed the maximum cost of remediation or closure at any time during the active life of the facility. The owner shall first notify the Department and obtain its approval of the justification for the reduction of the remediation and closure cost estimates. ()

05. Release from Financial Assurance Requirements. When remediation and closure conditions required by a permit are complete, financial assurance shall be released by the Department as follows: ()

a. When the Department determines that initial closure activities have been completed, financial assurance, less identified retainages, shall be released. ()

b. A sufficient amount of financial assurance shall be retained by the Department, up to five (5) years after closure, to ensure proper remediation and closure of a facility. ()

c. Release of any amount of financial assurance shall not release the owner from any responsibility for meeting remediation or closure requirements. ()

06. Owner Liability. Nothing in these rules shall relieve the owner of liability for remediation and closure costs. The use of all financial assurance shall not relieve the owner from responsibility and liability for remediation and closure costs. ()

206. -- 209. (RESERVED)

210. EXISTING FACILITIES.

01. Registration Requirement. Existing facility owners shall register with the Department within three (3) months after the original effective date of these rules. Registration shall include the information in Subsection 200.04 except for Subsection 200.04.j. Nothing in Section 210 shall be construed to deny an existing facility the opportunity to apply for, and receive, a permit under these rules. ()

02. Plan Requirement. Existing facilities shall submit a nutrient management plan and closure plan to the Director for approval within two (2) years of the original effective date of these rules in accordance with Subsections 200.07 and 200.08. An application fee shall not be required unless the facility is expanding. ()

03. Expanding Facility. The owner of an existing facility shall not increase the one-time animal unit capacity of the facility by ten percent (10%) or more without first obtaining a permit for the expansion as required by these rules. The ten percent (10%) increase is measured cumulatively from the original effective date of these rules. ()

211. -- 249. (RESERVED)

250. REQUIREMENTS FOR WATER QUALITY PROTECTION.

The following minimum design and performance standards are intended as a baseline for protection of public health and the waters of the state. These standards shall apply to all facilities and be reflected in the permit unless the Director approves, based on an applicant's site specific information, that compliance with a specific standard is not required to protect water quality and the public health. Other conditions, as determined by the Director to be necessary to protect water quality, may be included in a permit. ()

01. Animal Waste Management System Design Criteria. A facility's animal waste management system shall be designed and constructed in accordance with the NRCS and the American Society of Agricultural Engineers standards, whichever is most stringent and shall: ()

a. Contain the maximum expected operating water balance and the twenty-five (25) year twenty-four (24) hour rainfall event and the one (1) in five (5) year winter runoff. ()

b. Provide capacity to store the peak volume of process wastewater that will be generated during a six (6) month period. ()

c. Provide a one (1) foot freeboard in addition to the storage requirements, specified in Subsections 250.01.a. and 250.01.b. ()

d. Impoundments, other than for emergency runoff, containing or designed to contain process wastewater shall be designed for efficient leak detection and shall not be located in the one-hundred (100) year floodplain. ()

e. Seepage rates for impoundments shall be no greater than 1×10^{-7} cm/sec. ()

02. Water Quality Monitoring. Ground water and/or leak detection monitoring shall be conducted for every facility with a liquid storage impoundment and shall be designed to give the earliest possible detection of an unauthorized discharge to ground water. ()

03. Discharges. Facilities shall be constructed, operated and maintained to not cause unauthorized discharges. ()

04. Spill Contingency Plan. Facilities shall prepare a discharge response strategy that describes procedures and methods to be implemented for the abatement and cleanup of any pollutant. ()

05. Stockpile Areas. Animal waste stockpile areas, including compost areas, shall be constructed to ensure that all water and precipitation, which comes into contact with the stockpiles, does not enter waters of the state. ()

251. -- 299. (RESERVED)

300. APPLICATION PROCESSING PROCEDURE.

01. Application Completeness. Within thirty (30) days of receipt of an application, the Director shall provide written notice to the applicant as to whether the application meets all the requirements of Section 200. The Department shall provide public notice of the receipt of a complete application. An application which does not, on its face, meet all the requirements of Section 200 of these rules shall be returned to the applicant by the Director with a written list of the deficiencies. The Director will not process an application until it is determined to be complete in accordance with these rules. ()

02. Notice of Environmental Suitability of Facility Location. Within thirty (30) days of the Director's notice that the application is complete, the Director shall determine whether the facility is environmentally suitable for the selected location. In making this decision, the Director shall review the location of the facility relative to flood zones, dwellings, wells, surface and ground water and those other items the applicant must identify on the vicinity map. Written notice of the Director's determination will be sent to the applicant, with a copy sent to the appropriate county and city officials for the selected location, along with a Department analysis that includes the following: ()

a. A brief description of the proposed facility, its animal waste management system and its nutrient management plan; ()

b. A brief summary of the basis for the determination on environmental suitability including references to applicable requirements and supporting materials; ()

c. A description of the schedule for issuing a permit; and ()

d. The name and phone number of the Department staff to contact for additional information. ()

03. Draft Permit. Within sixty (60) days of the Director's determination that a facility is environmentally suitable for its proposed location, the Director shall either issue a draft permit or a notice of denial of a permit to the applicant. The draft permit shall be in the same form as a final permit and shall specify conditions of construction, operation and closure. ()

04. Public Comments. The Department shall provide notice to the public of its issuance of a draft permit. The public may provide written comments for a time period and in a manner specified in the Department's notice. The Department may, in its discretion, provide an opportunity for the public to provide oral comments. ()

05. Permit Denial. The Director may deny a permit if: ()

a. The owner of a facility is not in substantial compliance with a final agency order or any final order or judgement of a court secured by any state or federal agency relating to the operation of a swine facility; ()

b. The application is inaccurate; ()

c. The facility as proposed cannot meet the requirements set forth in these rules or cannot be constructed, operated and closed in a manner that protects human health and the environment; or ()

d. The appropriate county or city does not approve the location of the facility. ()

06. Final Permit. Within sixty (60) days of the issuance of a draft permit, the Director shall issue a final permit to the applicant, however, a permit shall not be issued by the Director until the applicant has received final approval from the appropriate county or city for the location of the facility and has received approval for a water right from the Department of Water Resources. The permit shall be effective for a fixed term of not more than five (5) years, and may be reissued upon receipt of an updated application and demonstration of compliance with the rules and permit requirements existing at the time of reissuance. ()

07. Additional Information. At any time during the application process an applicant shall provide the Director with additional information the Director deems necessary to process a permit, within thirty (30) days of the Director's request. The time period within which the Director must act with regard to the permit shall be stayed until the information requested is provided. If an applicant fails to provide the information within this time period, unless a longer time period is allowed by the Director, the Director may cease the application process and require the applicant to submit a new application. ()

301. -- 399. (RESERVED)

400. PERMIT CONDITIONS.

The following conditions shall apply to all permittees. ()

01. Compliance Required. The permittee shall comply with all conditions of the permit. The permit shall not relieve the permittee of the responsibility to comply with all other applicable local, state, and federal laws. ()

02. Financial Capability. Permittees shall have the financial capability to perform remedial actions and to meet the conditions of an approved closure plan for a facility. ()

03. Construction and Operation of Facility. The permittee shall ensure that construction, operation and maintenance of the facility proceed according to the construction plans and specifications and the approved monitoring, nutrient management and closure plans, and comply with the following: ()

a. Within thirty (30) days of completion of construction, submit as built plans. ()

b. Apply appropriate management practices as approved by the Director. ()

c. The facility or operations associated with the facility shall not create a public health hazard or nuisance conditions including odors. ()

d. The facility shall not dispose of any material not approved for disposal under the permit into the animal waste management system including, but not limited to, human waste. ()

e. The removal of animal waste from an impoundment or storage structure shall be performed in a manner to not damage the integrity of the liner. ()

f. Dead animals shall be removed from the facility for rendering, cremation, burial, composting or other disposal in accordance with IDAPA 02.04.17, "Rules Governing Dead Animal Movement and Disposal." ()

g. Nutrient management plans shall be amended if modifications to the facility operation, as outlined in the Nutrient Management Standard or other conditions, warrant the amendment. ()

h. Soil tests shall be conducted on all land application sites owned or leased by the permittee every year to determine compliance with the nutrient management plan and Nutrient Management Standard. The Director may require more frequent soil tests if deemed necessary. ()

04. Provide Information. The permittee shall furnish to the Director within a reasonable time, any information including copies of records required by the permit or other applicable rules, which the Director may reasonably require to determine whether cause exists for modifying or revoking the permit or to determine compliance with the permit or other applicable rules. ()

05. Entry and Access. The permittee shall allow the Director, consistent with Title 39, Chapter 1, Idaho Code, and in compliance with the biosecurity and sanitary standards of a facility, so long as the standards and requirements do not inhibit reasonable access, to: ()

a. Enter at reasonable times upon the premises of a permitted facility or where records are kept; ()

b. Have access to and copy at reasonable times any records that must be kept under conditions of the permit; ()

c. Inspect any facility or land application site; and ()

d. Sample or monitor at reasonable times, substances or parameters directly related to compliance with the permit or these rules. ()

06. Reporting. The permittee shall report to the Director under the circumstances and in the manner specified in Section 400: ()

a. Orally, no later than twenty-four (24) hours from the time the permittee knows or should reasonably know of any noncompliance which may endanger the public health or the environment; and ()

b. In writing, within five (5) working days from the time a permittee knows or should reasonably know of any event which has resulted or which may result in noncompliance with these rules. The report shall contain: ()

i. A description of the event and its cause or if the cause is not known, steps taken to investigate and determine the cause; ()

ii. The period of the event including, to the extent possible, times and dates; ()

iii. Measures taken to mitigate the event or eliminate the event and protect the public health; and ()

iv. Steps taken to prevent recurrence of the event. ()

c. In writing, when the permittee knows or should reasonably know of material relevant facts not submitted or incorrect information submitted in a permit application or any report or notice to the Director. ()

07. Begin Construction. If a permittee fails to begin construction or expansion of a facility within two (2) years of the effective date of a permit, the Director may void the permit and require a new application. ()

08. Permit Renewal. If a permittee intends to continue operation of the permitted facility after expiration of an existing permit, the permittee shall apply for a new permit at least one hundred eighty (180) days prior to the expiration of any permit issued pursuant to these rules. ()

401. -- 449. (RESERVED)

450. SPECIFIC PERMIT CONDITIONS.

01. Basis for Specific Permit Conditions. Conditions necessary for the protection of the environment and the public health may differ from facility to facility because of varying environmental conditions and animal waste compositions. The Director may establish, on a case-by-case basis, specific permit conditions. Specific conditions shall be established in consideration of characteristics specific to a facility and inherent hazards of those characteristics. Such characteristics include, but are not limited to, the following: ()

a. Chemical, biological, physical and volumetric characteristics of the process wastewater; ()

b. Geological and climatic nature of the facility site; ()

c. Size of the site and its proximity to population centers and to ground and surface water; ()

d. Legal considerations relative to land use and water rights; ()

e. Techniques used in process wastewater distribution and the disposition of that vegetation exposed to process wastewaters; and ()

f. The need for monitoring and record keeping to determine if the facility is being operated in conformance with its design and if its design is adequate to protect the environment and the public health. ()

02. Limitations to Operation. Conditions of the permit may specify or limit: ()

- a. Process wastewater composition; ()
- b. Method, manner and frequency of process wastewater treatment; ()
- c. Physical, chemical and biological characteristics of a facility; ()
- d. An odor management plan; and ()
- e. Any other condition the Director finds necessary to protect public health or the environment. ()

03. Compliance Schedules. The Director may establish a compliance schedule for facilities as part of the permit conditions including: ()

- a. Specific steps or actions to be taken by the permittee to achieve compliance with applicable requirements or permit conditions; and ()
- b. Dates by which those steps or actions are to be taken. ()

04. Monitoring Requirements. Any facility may be subject to monitoring requirements including, but not limited to, the following: ()

- a. The type, installation, use and maintenance of monitoring equipment; ()
- b. Monitoring or sampling methodology, frequency and locations; ()
- c. Monitored substances or parameters; ()
- d. Testing and analytical procedures; and ()
- e. Reporting requirements including both frequency and form. ()

451. -- 499. (RESERVED)

500. PERMIT MODIFICATION.

01. Minor Modifications. Minor modifications are those which do not have a potential affect to the environment or the public health. Such modifications shall be made by the Director. Minor modifications are generally limited to: ()

- a. The correction of typographical errors; ()
- b. Transfer of ownership or operational control in accordance with Section 550; or ()
- c. Certain minor changes in monitoring or operational conditions. ()

02. Major Modifications. All modifications not considered minor shall be considered major modifications. The procedure for making major modifications shall be the same as that used for a new permit under these rules. ()

501. -- 549. (RESERVED)

550. TRANSFER OF PERMITS.

01. Transfer Application. A new owner or operator of a facility shall submit a transfer application to the Director that includes at least the following: ()

- a. The relevant information required by Subsection 200.04; and ()
- b. Any change of conditions at the facility resulting from the transfer of ownership or operation. ()
- c. The Director shall review the transfer application and within sixty (60) days of its receipt either approve or deny the transfer. ()

02. Transfer Approval. An approved permit transfer shall be a minor modification in accordance with Subsection 500.01 as long as there are no major changes of conditions at the facility. Major changes of conditions at a facility will be subject to the provisions of Subsection 500.02. ()

03. Transfer Denial. A notification of a permit denial shall set forth the reasons for the denial, steps necessary to meet the requirements for a permit transfer and the opportunity for the applicant to request a hearing. ()

04. Permit Obligations. The new permittee assumes all rights and responsibilities of the transferred permit. ()

551. -- 599. (RESERVED)

600. VIOLATIONS.

01. Failure to Comply. Failure by a permittee to comply with the provisions of these rules or with any permit condition shall be deemed a violation of these rules. ()

02. Falsification of Statements and Records. It shall be a violation of these rules for any person to knowingly make a false statement, representation, or certification in any application report, document, or record developed, maintained, or submitted pursuant to these rules or the conditions of a permit. ()

03. Discharges. Any unauthorized discharge from a facility shall be a violation of these rules. ()

04. Penalties. Any person violating any provision of these rules or any permit or order issued thereunder shall be liable for a civil or criminal penalty in accordance with Title 39, Chapter 1, Idaho Code. ()

05. Permit Revocation. The Director may revoke a permit for: ()

a. A material violation of any condition of a permit; or ()

b. If the permit was obtained by misrepresentation or failure to disclose all relevant facts. ()

06. Revocation Hearing. Prior to revoking a permit, the Director shall issue a notice of intent which shall become final unless the permittee timely requests an administrative hearing in writing. Such hearing shall be conducted in accordance with Section 003 of these rules. ()

601. -- 998. (RESERVED)

999. CONFIDENTIALITY OF RECORDS.

Information obtained by the Department under these rules is subject to public disclosure pursuant to the provisions of Chapter 1, Title 74, Idaho Code. Information submitted under a trade secret claim may be entitled to confidential treatment by the Department as provided in Section 74-114, Idaho Code, and IDAPA 58.01.21, "Rules Governing the Protection and Disclosure of Records in the Possession of the Idaho Department of Environmental Quality." ()

58.01.11 – GROUND WATER QUALITY RULE

000. LEGAL AUTHORITY.

The Idaho Legislature has given the Board of Environmental Quality authority to promulgate the Ground Water Quality Rule pursuant to Sections 39-105, 39-107, 39-120, and 39-126, Idaho Code. The authority to formulate and adopt rules as are necessary and feasible to protect the environment and health of the citizens of the state is vested in the Director and Board pursuant to Sections 39-105 and 39-107, Idaho Code. Under Section 39-120, Idaho Code, the Board is authorized to adopt, by rule, ambient ground water quality standards. Under Section 39-126, Idaho Code, all state agencies shall incorporate the Ground Water Quality Plan, adopted by the legislature, in the administration of their programs and are granted authority to promulgate rules to protect ground water quality as necessary to administer such programs. ()

001. TITLE AND SCOPE.

01. Title. This rule is titled IDAPA 58.01.11, Rules of the Department of Environmental Quality, IDAPA 58.01.11, "Ground Water Quality Rule." ()

02. Scope. Under Section 39-120, Idaho Code, the Department of Environmental Quality is designated as the primary agency to coordinate and administer ground water quality protection programs for the state. This rule establishes minimum requirements for protection of ground water quality through standards and an aquifer categorization process. The requirements of this rule shall serve as a basis for the administration of programs which address ground water quality. This rule does not in and of itself create a permit program. ()

002. ADMINISTRATIVE APPEALS.

Persons may be entitled to appeal agency actions authorized under this chapter pursuant to IDAPA 58.01.23, "Rules of Administrative Procedure Before the Board of Environmental Quality." ()

003. WRITTEN INTERPRETATIONS.

The Department of Environmental Quality may have written statements which pertain to the interpretation of the rules of this chapter. If available, such written statements can be inspected and copied, at cost, at the Department of Environmental Quality, 1410 North Hilton, Boise, ID 83706-1255. ()

004. -- 005. (RESERVED)

006. POLICIES.

It is the intent of the Department to implement, through this rule, the following policies from the Protection and Prevention Sections of the Idaho Ground Water Quality Plan, adopted by the legislature, 1992 Session Law, Chapter 310, Page 922. These policies are: ()

01. Ground Water Quality Protection. It is the policy of the state of Idaho to maintain and protect the existing high quality of the state's ground water. ()

02. Existing and Projected Future Beneficial Uses. The policy of the state of Idaho is that existing and projected future beneficial uses of ground water shall be maintained and protected, and degradation that would impair existing and projected future beneficial uses of ground water and interconnected surface water shall not be allowed. ()

03. Categorization of Ground Water. The policy of the state of Idaho is to provide differential protection for the state's ground water resources. A ground water categorization system should be established for aquifers or portions of aquifers. The categorization system should be based on vulnerability of the ground water, existing and projected future beneficial uses of the ground water, existing quality of the ground water, and social and economic considerations. ()

04. Ground Water Quality Standards. The policy of the state of Idaho is to establish ground water quality standards for biological, radiological, and chemical constituents. ()

05. Prevention of Ground Water Contamination. The policy of the state of Idaho is to prevent contamination of ground water from all regulated and nonregulated sources of contamination to the maximum extent practical. ()

06. Mining. The policy of the state of Idaho is to protect ground water and allow for the extraction of minerals above and within ground water. ()

007. DEFINITIONS.

- 01. Agricultural Chemical.** Any pesticide, nutrient or fertilizer used for the benefit of agricultural production or pest management. ()
- 02. Aquifer.** A geological unit of permeable saturated material capable of yielding economically significant quantities of water to wells and springs. ()
- 03. Beneficial Uses.** Various uses of ground water in Idaho including, but not limited to, domestic water supplies, industrial water supplies, agricultural water supplies, aquacultural water supplies, and mining. A beneficial use is defined as actual current or projected future uses of ground water. ()
- 04. Best Available Method.** Any system, process, or method which is available to the public for commercial or private use to minimize the impact of point or nonpoint sources of contamination on ground water quality. ()
- 05. Best Management Practice.** A practice or combination of practices determined to be the most effective and practical means of preventing or reducing contamination to ground water and interconnected surface water from nonpoint and point sources to achieve water quality goals and protect the beneficial uses of the water. ()
- 06. Best Practical Method.** Any system, process, or method that is established and in routine use which could be used to minimize the impact of point or nonpoint sources of contamination on ground water quality. ()
- 07. Board.** The Idaho Board of Environmental Quality. ()
- 08. Cleanup.** The removal, treatment or isolation of a contaminant from ground water through the directed efforts of humans or the removal or treatment of a contaminant in ground water through management practice or the construction of barriers, trenches and other similar facilities for prevention of contamination, as well as the use of natural processes such as ground water recharge, natural decay and chemical or biological decomposition. ()
- 09. Constituent.** Any chemical, ion, radionuclide, synthetic organic compound, microorganism, waste or other substance occurring in ground water. ()
- 10. Contaminant.** Any chemical, ion, radionuclide, synthetic organic compound, microorganism, waste or other substance which does not occur naturally in ground water or which naturally occurs at a lower concentration. ()
- 11. Contamination.** The direct or indirect introduction into ground water of any contaminant caused in whole or in part by human activities. ()
- 12. Crop Root Zone.** The zone that extends from the surface of the soil to the depth of the deepest crop root and is specific to a species of plant, group of plants, or crop. ()
- 13. Degradation.** The lowering of ground water quality as measured in a statistically significant and reproducible manner. ()
- 14. Department.** The Department of Environmental Quality. ()
- 15. Extraction.** Physical removal of ore or waste rock from mineral-bearing deposits. Extraction does not include processing, which is the removal of target minerals from ores by physical or chemical methods. ()
- 16. Ground Water.** Any water of the state which occurs beneath the surface of the earth in a saturated geological formation of rock or soil. ()

17. Ground Water Quality Standard. Values, either numeric or narrative, assigned to any constituent for the purpose of establishing minimum levels of protection. ()

18. Highly Vulnerable Ground Water. Ground water characterized by a relatively high potential for contaminants to enter and/or be transported within the flow system. Determinations of ground water vulnerability will include consideration of land use practices and aquifer characteristics. ()

19. Irreplaceable Source. A ground water source serving a beneficial use(s) where the reliable delivery of comparable quality and quantity of water from an alternative source in the region would be economically infeasible or precluded by institutional constraints. ()

20. Mine Operator. Any person authorized to engage in mining activities, including without limitation those authorized by law, lease, contract, permit, or plan of operation. It does not include a governmental agency that grants mineral leases or similar contracts or permits unless the agency is engaged in mining activities. ()

21. Mining Activity. Recovery of a mineral from mineral-bearing deposits, which includes reclamation, extraction, excavation, overburden placement, disposal of tailings resulting from processing, and disposal of mineral extraction wastes, including tailings that are the result of extraction, waste rock, and other extraction wastes uniquely associated with mining. ()

22. Mining Area. The area on or within which one (1) or more mining activities occur. The Department shall determine the boundaries of the mining area as provided in Section 401. Distinct mining activities may constitute separate mining areas. ()

23. Natural Background Level. The level of any constituent in the ground water within a specified area as determined by representative measurements of the ground water quality unaffected by human activities. ()

24. Person. Any individual, association, partnership, firm, joint stock company, joint venture, trust, estate, political subdivision, public or private corporation, state or federal governmental department, agency or instrumentality, or any legal entity which is recognized by law as the subject of rights and duties. ()

25. Point of Compliance. The vertical surface where the Department determines compliance with ground water quality standards as provided in Subsection 400.05 and Section 401. ()

26. Practical Quantitation Level. The lowest concentration of a constituent that can be reliably quantified among laboratories within specified limits of precision and accuracy during routine laboratory operating conditions. Specified limits of precision and accuracy are the criteria listed in the calibration specifications or quality control specifications of an analytical method. ()

27. Projected Future Beneficial Uses. Various uses of ground water, such as drinking water, aquaculture, industrial, mining or agriculture, that are practical and achievable in the future based on hydrogeologic conditions, water quality, future land use activities and social/economic considerations. ()

28. Recharge Area. An area in which water infiltrates into the soil or geological formation from, including but not limited to precipitation, irrigation practices and seepage from creeks, streams, and lakes, and percolates to one (1) or more aquifers. ()

29. Reclamation. The process of restoring an area affected by a mining activity to its original or another beneficial use, considering previous uses, possible future uses, and surrounding topography. The objective is to re-establish a diverse, self-perpetuating plant community, and to minimize erosion, remove hazards, and maintain water quality. ()

30. Remediation. Any action taken (1) to control the source of contamination, (2) to reduce the level of contamination, (3) to mitigate the effects of contaminants, and/or (4) to minimize contaminant movement. Remediation includes providing alternate drinking water sources when needed. ()

31. Site Background Level. The ground water quality at the hydraulically upgradient site boundary. ()

008. -- 010. (RESERVED)

011. INCORPORATION BY REFERENCE.

Codes, standards and regulations may be incorporated by reference in this rule pursuant to Section 67-5229, Idaho Code. Such incorporation by reference shall constitute full adoption by reference, including any notes or appendices therein, unless expressly provided otherwise in this rule. Codes, standards or regulations adopted by reference throughout this rule are available in the following locations: ()

01. Department of Environmental Quality. Department of Environmental Quality, 1410 N. Hilton, Boise, ID 83706-1255. ()

02. Law Library. State Law Library, 451 W. State Street, P.O. Box 83720, Boise, ID 83720-0051. ()

03. U.S. Government Printing Office. U.S. Government Printing Office, Superintendent of Documents, Washington, D.C. 20402, or U.S. Government Bookstore, Room 194 Federal Bldg., 915 Second Ave., Seattle, WA 98174. ()

012. -- 149. (RESERVED)

150. IMPLEMENTATION.

This rule establishes minimum requirements to maintain and protect ground water quality. This rule applies to all activities with the potential to degrade ground water quality. ()

01. Ground Water Quality Standards. The numerical and narrative standards in Sections 200 and 301 identify minimum levels of protection for ground water quality and shall be used as a basis for: ()

a. Evaluating or comparing ground water quality when developing or modifying best available methods, best management practices, or best practical methods; ()

b. Identifying permit conditions; ()

c. Establishing cleanup levels; and ()

d. Determining appropriate actions when ground water quality standards are exceeded. ()

02. Aquifer Categorization. Aquifers of the state shall be categorized based on vulnerability of the ground water, existing and projected future beneficial uses of the ground water, existing water quality, and social and economic considerations. There shall be three aquifer categories, Sensitive Resource, General Resource, and Other Resource, to provide different levels of protection. The level of protection required for each category and application of standards to these categories are shown in Table I.

Table 1. Level of Protection and Application of Standards to Aquifer Categories		
Category	Level of Protection	Application of Standards
Sensitive Resource	Apply best management practices and best available methods. This category provides the highest level of ground water protection.	May apply stricter standards than in Section 200.
General Resource	Apply best management practices and best practical methods to the maximum extent practical.	Apply numerical and narrative standards in Section 200.

Category	Level of Protection	Application of Standards
Other Resource	Apply best management practices and best practical methods to the maximum extent practical.	May apply less strict standards than in Section 200.

()

a. All aquifers where there are activities with the potential to degrade ground water quality are categorized in Section 300. Those aquifers where no activities with the potential to degrade ground water quality are occurring will remain uncategorized until such activities are commenced. If no action is taken to categorize an aquifer when an activity(ies) with the potential to degrade ground water quality is initiated, the aquifer will automatically be categorized as General Resource.

()

b. Categorization should be considered when an activity with the potential to degrade ground water quality is proposed over an aquifer or portion of an aquifer which presently has no such activities and, based on the criteria in Section 350, the aquifer may be most appropriately categorized as Sensitive Resource or Other Resource.

()

c. Recategorization should be considered when information on vulnerability of the ground water, existing and projected future beneficial uses of the ground water, existing quality of the ground water, and social and economic considerations, in conjunction with one or more of the criteria in Section 350, demonstrates that the aquifer or portion of an aquifer may be more appropriate in another category.

()

03. **Ground Water-Surface Water Interconnection.** The beneficial uses of interconnected surface water shall be recognized when evaluating ground water quality protection. The implementation of water quality programs shall ensure that the quality of ground water that discharges to surface water does not impair the identified beneficial uses of the surface water and that surface water infiltration does not impair beneficial uses of ground water.

()

04. **Interagency Coordination.** The Department will coordinate with other federal, state, and local agencies to pursue interagency agreements when necessary to ensure implementation of this rule for activities which have the potential to degrade ground water quality.

()

151. -- 199. (RESERVED)

200. **GROUND WATER QUALITY STANDARDS.**

The following numerical and narrative standards apply to all ground water of the state and shall not be exceeded unless otherwise allowed in this rule.

()

01. **Numerical Ground Water Quality Standards.**

()

a. The Primary Constituent Standards are based on protection of human health and are identified in Table II.

Chemical Abstract Service Number	Constituent	Standard (mg/l unless otherwise specified)
7440-36-0	Antimony	0.006
7440-38-2	Arsenic	0.05

Table II - Primary Constituent Standards		
Chemical Abstract Service Number	Constituent	Standard (mg/l unless otherwise specified)
1332-21-4	Asbestos	7 million fibers/l longer than 10 um
7440-39-3	Barium	2
7440-41-7	Beryllium	0.004
7440-43-9	Cadmium	0.005
7440-47-3	Chromium	0.1
7440-50-8	Copper	1.3
57-12-5	Cyanide	0.2
16984-48-8	Fluoride	4
7439-92-1	Lead	0.015
7439-97-6	Mercury	0.002
*1	Nitrate (as N)	10
*1	Nitrite (as N)	1
*1	Nitrate and Nitrite (both as N)	10
7782-49-2	Selenium	0.05
7440-28-0	Thallium	0.002
15972-60-8	Alachlor	0.002
1912-24-9	Atrazine	0.003
71-43-2	Benzene	0.005
50-32-8	Benzo(a)pyrene (PAH)	0.0002
75-27-4	Bromodichloromethane (THM)	0.1
75-25-2	Bromoform (THM)	0.1
1563-66-2	Carbofuran	0.04
56-23-5	Carbon Tetrachloride	0.005
57-74-9	Chlordane	0.002
124-48-1	Chlorodibromomethane (THM)	0.1
67-66-3	Chloroform(THM)	0.002
94-75-7	2,4-D	0.07
75-99-0	Dalapon	0.2
103-23-1	Di(2-ethylhexyl) adipate	0.4
96-12-8	Dibromochloropropane	0.0002
541-73-1	Dichlorobenzene m-	0.6

Table II - Primary Constituent Standards		
Chemical Abstract Service Number	Constituent	Standard (mg/l unless otherwise specified)
95-50-1	Dichlorobenzene o-	0.6
106-46-7	1,4(para)-Dichlorobenzene or Dichlorobenzene p-	0.075
107-06-2	1,2-Dichloroethane	0.005
75-35-4	1,1-Dichloroethylene	0.007
156-59-2	cis-1, 2-Dichloroethylene	0.07
156-60-5	trans-1, 2-Dichloroethylene	0.1
75-09-2	Dichloromethane	0.005
78-87-5	1,2-Dichloropropane	0.005
117-81-7	Di(2-ethylhexyl)phthalate	0.006
88-85-7	Dinoseb	0.007
85-00-7	Diquat	0.02
145-73-3	Endothall	0.1
72-20-8	Endrin	0.002
100-41-4	Ethylbenzene	0.7
106-93-4	Ethylene dibromide	0.00005
1071-83-6	Glyphosate	0.7
76-44-8	Heptachlor	0.0004
1024-57-3	Heptachlor epoxide	0.0002
118-74-1	Hexachlorobenzene	0.001
77-47-4	Hexachlorocyclopentadiene	0.05
58-89-9	Lindane	0.0002
72-43-5	Methoxychlor	0.04
108-90-7	Monochlorobenzene	0.1
23135-22-0	Oxamyl (Vydate)	0.2
87-86-5	Pentachlorophenol	0.001
1918-02-1	Picloram	0.5
1336-36-3	Polychlorinated biphenyls (PCBs)	0.0005
122-34-9	Simazine	0.004
100-42-5	Styrene	0.1
1746-01-6	2,3,7,8-TCDD (Dioxin)	3.0 x 10 ⁻⁸
127-18-4	Tetrachloroethylene	0.005

Table II - Primary Constituent Standards		
Chemical Abstract Service Number	Constituent	Standard (mg/l unless otherwise specified)
108-88-3	Toluene	1
*1	Total Trihalomethanes [the sum of the concentrations of bromodichloromethane, dibromochloromethane, tribromomethane (bromoform), and trichloromethane (chloroform)]	0.1
8001-35-2	Toxaphene	0.003
93-72-1	2,4,5-TP (Silvex)	0.05
120-82-1	1,2,4-Trichlorobenzene	0.07
71-55-6	1,1,1-Trichloroethane	0.2
79-00-5	1,1,2-Trichloroethane	0.005
79-01-6	Trichloroethylene	0.005
75-01-4	Vinyl Chloride	0.002
1330-20-7	Xylenes (total)	10
*1	Gross alpha particle activity (including radium -226, but excluding radon and uranium)	15 pCi/l
*1	Combined beta/photon emitters	4 millirems/year effective dose equivalent
*1	Combined Radium - 226 and radium 228	5 pCi/l
*1	Strontium 90	8 pCi/l
*1	Tritium	20,000 pCi/l
*1	Total Coliform ²	1 colony forming unit/100 ml
	Escherichia coliform (E. coli)	Less than 1 viable colony or colony forming unit/100 ml using any EPA approved method
	Fecal coliform	Less than 1 viable colony or colony forming unit/100 ml using any EPA approved method
Table Footnotes		
*1 No Chemical Abstract Service Number exists for this constituent.		
² An exceedance of the primary ground water quality standard for total coliform is not a violation of these rules. If the primary ground water quality standard for total coliform is exceeded, additional analysis for fecal coliform or E. coli will be conducted. An exceedance of the primary ground water quality standards for either fecal coliform or E. coli is a violation of these rules.		

()

b. The Secondary Constituent Standards are generally based on aesthetic qualities and are identified in Table III.

TABLE III - SECONDARY CONSTITUENT STANDARDS	
Constituent	Standard (mg/l unless otherwise specified)
Aluminum	0.2
Chloride	250
Color	15 Color Units
Foaming Agents	0.5
Iron	0.3
Manganese	0.05
Odor	3.0 Threshold Odor Number
pH	6.5 to 8.5 (no units apply)
Silver	0.1
Sulfate	250
Total Dissolved Solids	500
Zinc	5

()

c. Sample preservation and analytical procedures to determine compliance with the standards identified in Subsection 200.01 shall be in accordance with the following, except that cyanide shall be analyzed as weak acid dissociable cyanide using a method approved by the Department: ()

i. Environmental Protection Agency, Code of Federal Regulations, Title 40, Parts 141 and 143, revised as of July 2001; or ()

ii. Another method approved by the Department. ()

02. Narrative Ground Water Quality Standards. Contaminant concentrations, alone or in combination with other contaminants or properties, shall not cause the ground water to be hazardous, deleterious, carcinogenic, mutagenic, teratogenic, or toxic. Determinations of specific numerical levels when applying this standard shall be based on: ()

a. Best scientific information currently available on adverse effects of the contaminant(s); ()

b. Protection of a beneficial use; or ()

c. Practical quantitation levels for the contaminant(s), if they exceed the levels identified in Subsection 200.02.a. or 200.02.b. ()

03. Natural Background Level. If the natural background level of a constituent exceeds the standard in this section, the natural background level shall be used as the standard. ()

201. -- 299. (RESERVED)

300. CATEGORIZED AQUIFERS OF THE STATE.

Aquifers or portions of aquifers in the state are categorized as follows: ()

01. Sensitive Resource. ()

a. Spokane Valley -- Rathdrum Prairie Aquifer. ()

i. In addition to the ground water quality standards in Section 200, the following narrative standard applies: the aquifer shall not be degraded, as it relates to beneficial uses, as a result of point source or nonpoint source activity unless it is demonstrated by the person proposing the activity that such change is justifiable as a result of necessary economic or social development. ()

02. General Resource. All aquifers or portions of aquifers where there are activities with the potential to degrade ground water quality of the aquifer, unless otherwise listed in Subsection 300.01 or 300.03. Once an activity with the potential to degrade the ground water quality of an uncategorized aquifer or portion of an aquifer is initiated, the uncategorized aquifer shall automatically become General Resource unless petitioned into the Sensitive Resource or Other Resource category. ()

03. Other Resource. ()

301. MANAGEMENT OF ACTIVITIES WITH THE POTENTIAL TO DEGRADE AQUIFERS.

01. Sensitive Resource Category Aquifers. ()

a. Activities with the potential to degrade Sensitive Resource aquifers shall be managed in a manner which maintains or improves existing ground water quality through the use of best management practices and best available methods except when a point of compliance is set pursuant to Section 401. ()

b. Numerical and narrative standards identified in Section 200 shall apply to aquifers or portions of aquifers categorized as Sensitive Resource. In addition, stricter numerical and narrative standards, for specified constituents, may be adopted pursuant to Section 350 on a case by case basis and listed in Section 300. ()

02. General Resource Category Aquifers. ()

a. Activities with the potential to degrade General Resource aquifers shall be managed in a manner which maintains or improves existing ground water quality through the use of best management practices and best practical methods to the maximum extent practical except when a point of compliance is set pursuant to Section 401. ()

b. Numerical and narrative standards identified in Section 200 shall apply to aquifers or portions of aquifers categorized as General Resource. ()

03. Other Resource Category Aquifers. ()

a. Activities with the potential to degrade Other Resource aquifers shall be managed in a manner which maintains existing ground water quality, except for those identified constituents which may have a less stringent standard, through the use of best management practices and best practical methods to the maximum extent practical except when a point of compliance is set pursuant to Section 401. ()

b. Numerical and narrative standards identified in Section 200 shall apply to aquifers or portions of aquifers categorized as Other Resource. In addition, less strict numerical and narrative standards, for specified constituents, may be adopted pursuant to Section 350 on a case by case basis and listed in Section 300. ()

302. -- 349. (RESERVED)

350. PROCEDURES FOR CATEGORIZING OR RECATEGORIZING AN AQUIFER.

The following process shall be used for categorizing or recategorizing an aquifer. ()

01. Criteria for Aquifer Categories. The following criteria shall be considered when a petition to categorize or recategorize aquifers or portions of aquifers is submitted to the Board: ()

a. For Sensitive Resource aquifers: ()

i. The ground water in an aquifer or portion of an aquifer is of a better quality than the ground water quality standards in Section 200 and maintenance of this quality is needed to protect an identified beneficial use(s); ()

ii. The ground water in an aquifer or portion of an aquifer is considered highly vulnerable; ()

iii. The ground water in an aquifer or portion of an aquifer represents an irreplaceable source for the identified beneficial use(s); ()

iv. The ground water quality in an aquifer or portion of an aquifer has been degraded and there is a need for additional protection measures to maintain or improve the water quality or prevent impairment of a beneficial use; ()

v. The ground water within an aquifer or portion of an aquifer is shown to be hydrologically interconnected with surface water and additional protection is needed to maintain the quality of either surface or ground water. Hydrologic interconnections can include either natural or induced ground water recharge or discharge areas; or ()

vi. The ground water within an aquifer or portion of an aquifer demonstrates other criteria which justify the need for additional protection. ()

b. For General Resource aquifers: ()

i. An activity with the potential to degrade ground water quality is initiated over an aquifer or portion of an aquifer which presently has no such activities; ()

ii. The ground water in an aquifer or portion of an aquifer is currently being used for drinking water or another beneficial use which requires similar protection; or ()

iii. The ground water in an aquifer or portion of an aquifer has a projected future beneficial use of drinking water or another beneficial use which requires similar protection. ()

c. For other resource aquifers: ()

i. The ground water quality within an aquifer or portion of an aquifer does not meet one or more of the ground water quality standards in Section 200; and allowing the ground water quality to remain at this level does not impair existing or projected future beneficial uses within the aquifer or portion of an aquifer; ()

ii. The projected ground water quality within an aquifer or portion of an aquifer will not meet one or more of the ground water quality standards in Section 200 as a result of activities over or within the aquifer or portion of an aquifer; and allowing the proposed degradation will not impair existing or projected future beneficial uses; ()

iii. Human caused conditions or sources of contamination have resulted in ground water quality standards in Section 200 being exceeded, and the contamination cannot be remedied for economical or technical reasons, or remediation would cause more environmental damage to correct than to leave in place; or ()

iv. The ground water within an aquifer or portion of an aquifer demonstrates other criteria which justify the need for categorization as an Other Resource. ()

02. Petition Process. The Department or any other person may petition the Board to initiate

rulemaking to categorize or recategorize an aquifer or portion of an aquifer pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure Before the Board of Environmental Quality.” In addition to the information required in a rulemaking Petition pursuant to IDAPA 58.01.23, the following information shall be submitted in writing by the Petitioner for the identified aquifer or portion of an aquifer: ()

- a. Current category, if applicable; ()
- met; b. Proposed category and an explanation of how one or more of the criteria in Subsection 350.01 are ()
- c. An explanation of why the categorization or recategorization is being proposed; ()
- d. Location, description and areal extent; ()
- e. General location and description of existing and projected future ground water beneficial uses; ()
- f. Documentation of the existing ground water quality; ()
- g. Documentation of aquifer characteristics, where available, including, but not limited to: ()
 - i. Depth to ground water; ()
 - ii. Thickness of the water bearing section; ()
 - iii. Direction and rate of ground water flow; ()
 - iv. Known recharge and discharge areas; and ()
 - v. Geology of the area; ()
- h. Identification of any proposed standards, for specified constituents, which would be stricter or less strict than the ground water quality standards in Section 200, or any standards to be applied in addition to those in Section 200; and a rationale for the proposed standards. ()

03. Preliminary Department Review. Prior to submission of a petition to the Board to categorize or recategorize an aquifer, any person may seek a preliminary review of the petition from the Department. The Department shall respond to the petitioner with comments within forty-five (45) days. ()

351. -- 399. (RESERVED)

400. GROUND WATER CONTAMINATION.

01. Releases Degrading Ground Water Quality. No person shall cause or allow the release, spilling, leaking, emission, discharge, escape, leaching, or disposal of a contaminant into the environment in a manner that: ()

- a. Causes a ground water quality standard to be exceeded; ()
- b. Injures a beneficial use of ground water; or ()
- c. Is not in accordance with a permit, consent order or applicable best management practice, best available method or best practical method. ()

02. Measures Taken in Response to Degradation. ()

- a. Except when a point of compliance is set pursuant to Section 401, when a numerical standard is not

exceeded, but degradation of ground water quality is detected and deemed significant by the Department, the Department shall take one (1) or more of the following actions: ()

- i. Require a modification of regulated activities to prevent continued degradation; ()
- ii. Coordinate with the appropriate agencies and responsible persons to develop and implement prevention measures for activities not regulated by the Department; ()

iii. Allow limited degradation of ground water quality for the constituents identified in Subsection 200.01.a. if it can be demonstrated that: ()

(1) Best management practices, best available methods or best practical methods, as appropriate for the aquifer category, are being applied; and ()

(2) The degradation is justifiable based on necessary and widespread social and economic considerations; or ()

iv. Allow degradation of ground water quality up to the standards in Subsection 200.01.b., if it can be demonstrated that: ()

(1) Best management practices are being applied; and ()

(2) The degradation will not adversely impact a beneficial use. ()

b. The following criteria shall be considered when determining the significance of degradation: ()

i. Site specific hydrogeologic conditions; ()

ii. Water quality, including seasonal variations; ()

iii. Existing and projected future beneficial uses; ()

iv. Related public health issues; and ()

v. Whether the degradation involves a primary or secondary constituent in Section 200. ()

03. Contamination Exceeding a Ground Water Quality Standard. The discovery of any contamination exceeding a ground water standard that poses a threat to existing or projected future beneficial uses of ground water shall require appropriate actions, as determined by the Department, to prevent further contamination. These actions may consist of investigation and evaluation, or enforcement actions if necessary to stop further contamination or clean up existing contamination, as required under the Environmental Protection and Health Act, Section 39-108, Idaho Code. ()

04. Agricultural Chemicals. Agricultural chemicals found in intermittently saturated soils within the crop root zone will not be considered ground water contaminants as long as the chemicals remain within the crop root zone, and have been applied in a manner consistent with all appropriate regulatory requirements. ()

05. Site-Specific Ground Water Quality Levels or Points of Compliance. The Department may allow site-specific ground water quality levels, for any aquifer category, that vary from a standard(s) in Section 200 or Section 300, or may allow site-specific points of compliance, based on consideration of effects to human health and the environment, for: ()

a. Remediation conducted under the Department's oversight; ()

b. Permits issued by the Department; ()

- c. Situations where the site background level varies from the ground water quality standard; ()
- d. Dissolved concentrations of secondary constituents listed in Section 200 of this rule. The Department may allow the use of dissolved concentrations for secondary constituents if the requesting person demonstrates that doing so will not adversely affect human health and the environment; or ()
- e. Other situations authorized by the Department in writing. ()

401. MINING.

01. Request for Setting Point(s) of Compliance and Standards Applicable to Mining Activities. At the request of a mine operator, pursuant to this section, the Department shall set a point of compliance, or points of compliance, at which the mine operator shall protect current and projected future beneficial uses of the ground water and meet the ground water quality standards as described in Section 200 or as allowed under Subsection 400.05. Degradation of ground water is allowed at a point of compliance if the mine operator implements the level of protection during mining activities appropriate for the aquifer category as specified in Table 1 of Subsection 150.02. If a request is not made, the mine operator must meet the ground water quality standards as described in Subsection 150.01 in ground water both within and beyond the mining area unless the Department establishes the point(s) of compliance consistent with Subsection 401.03. ()

02. Application Process. ()

a. If the mine operator requests a point of compliance, or points of compliance, the mine operator shall make written application to the Department. The application shall be accompanied by a fee of two thousand five hundred dollars (\$2,500). The application shall include the following information in sufficient detail to allow the Department to establish point(s) of compliance: ()

- i. Name, location, and mailing address of the mining operation; ()
- ii. Name, mailing address, and phone number of the mine operator; ()
- iii. Land ownership status of the mining operation (federal, state, private or public); ()
- iv. The legal structure (corporation, partnership, etc.) and residence of the mine operator; ()
- v. The legal description, to the quarter-quarter section, of the location of the proposed mining operation; ()
- vi. Evidence the mine operator is authorized by the Secretary of State to conduct business in the state of Idaho; ()
- vii. A general description of the operational plans for the mining operation from construction through final reclamation. This description shall include any proposed phases for construction, operations, and reclamation and a map that identifies the location of all mining activities; ()
- viii. A preconstruction topographic site map or aerial photos extending at least one (1) mile beyond the outer limits of the mining area, identifying and showing the location and extent of the following features: ()
 - (1) All wells, perennial and intermittent springs, adit discharges, wetlands, surface waters and irrigation ditches; ()
 - (2) All public and private drinking water supply source(s) within one (1) mile of the mining area; ()
 - (3) All service roads and public roads; ()
 - (4) All buildings and structures within one (1) mile of the mining area; ()

- (5) All special resource waters within one (1) mile of the mining area; and ()
- (6) All Clean Water Act Section 303(d) listed streams, and their listed impairments, within one (1) mile of the mining area; ()
- ix. To the extent such information is available, a description and location of underground mine workings and adits and a description of the structural geology that may influence ground water flow and direction; ()
- x. Information regarding the relevant factors set forth in Subsection 401.03; and ()
- xi. A proposed point of compliance, or points of compliance. ()
- b.** Within thirty (30) days of receipt of an application, the Department shall issue a written notice to the mine operator indicating: ()
 - i. That the application is complete; or ()
 - ii. That the Department is rejecting the application as incomplete. In such a case, the Department shall provide a list of deficiencies. Upon a determination that the application is incomplete, the Department shall refund one-half (1/2) of the application fee. ()
- c.** The Department shall establish the point(s) of compliance within one hundred eighty (180) days after receipt of a complete application unless the Department determines that additional time is necessary due to unusual circumstances. ()

03. Setting the Point(s) of Compliance. The point(s) of compliance shall be set as close as possible to the boundary of the mining area, taking into consideration the relevant factors set forth in Subsections 401.03.a. through 401.03.h., but in no event shall the point(s) of compliance be within the boundary of the mining area. The mining area boundary means the outermost perimeter of the mining area (projected in the horizontal plane) as it would exist at the completion of the mining activity. The point(s) of compliance shall be set so that, outside the mining area boundary, there is no injury to current or projected future beneficial uses of ground water and there is no violation of water quality standards applicable to any interconnected surface waters. The Department's determination regarding the point(s) of compliance shall be based on an analysis and consideration of all relevant factors including, but not limited to: ()

- a.** The hydrogeological characteristics of the mining area and surrounding land, including any dilution characteristics of the aquifer and any natural attenuation supported by site-specific data; ()
- b.** The concentration, volume, and physical and chemical characteristics of contaminants resulting from the mining activity, including the toxicity and persistence of the contaminants; ()
- c.** The quantity, quality, and direction of flow of ground water underlying the mining area; ()
- d.** The proximity and withdrawal rates of current ground water users; ()
- e.** A prediction of projected future beneficial uses; ()
- f.** The availability of alternative drinking water supplies; ()
- g.** The existing quality of the ground water, including other sources of contamination and their cumulative impacts on the ground water; and ()
- h.** Public health, safety, and welfare effects. ()

04. Ground Water Monitoring and Reporting. The Department shall require ground water

monitoring and reporting whenever the Department sets the point(s) of compliance. The Department shall not require ground water monitoring that duplicates ground water monitoring required by other state or federal agencies as long as the mine operator provides the data to the Department. ()

- a. A ground water monitoring system required under Subsection 401.04 shall be designed to: ()
 - i. Represent the quality of background ground water that has not been affected by the mining activity; and ()
 - ii. Represent the quality of ground water passing the point(s) of compliance in order to determine compliance with ground water quality standards or effectiveness of best management practices. ()
- b. When practicable, indicator monitoring wells or other devices may be required. Such indicator wells and other devices shall not be used to determine compliance with the ground water quality standards, but instead may be used to evaluate modeling results, to predict the quality of ground water at the point(s) of compliance, or to determine the effectiveness of best management practices. ()
- c. All monitoring wells shall be constructed (well depth, well screen size, well screen interval, gravel pack, etc.) and developed so that ground water samples represent the quality of ground water that is relevant to current and future beneficial uses. ()

05. Coordination with Other State or Federal Agencies/Public Notice. Before setting the point(s) of compliance or requiring ground water monitoring, the Department shall coordinate with and seek recommendations from other state or federal agencies that have regulatory authority over the mining activities. The Department may provide public notice and an opportunity for public comment prior to setting or changing the point(s) of compliance. The Department shall issue a public notice after it sets the point(s) of compliance. ()

06. Limitations. Section 401 addresses only those contaminants that naturally occur in the mining area ground water or in the surrounding rock or soil and are present in concentrations above the natural background level as a result of mining activities. ()

07. Application of Provisions. The provisions set out in Section 401 apply to new mining activities or to an expansion of existing mining activities commencing after July 1, 2009. All consent orders, compliance schedules, and other agreements adopted or issued by the Department prior to July 1, 2009 pertaining to ground water protection at mine sites shall remain in full force and effect. ()

08. Change in Point(s) of Compliance/Ground Water Monitoring. ()

a. A change in the point(s) of compliance may be requested by the mine operator when there is a change in, or new information regarding, the mining activity or any of the factors set forth in Subsection 401.03. A change requested by the mine operator shall include an identification of the new proposed point(s) of compliance, a description of the cause for the change and any data supporting the change. The mine operator's request shall be handled as an application submitted pursuant to Subsection 401.02.a. and shall be subject to all other provisions of Section 401. ()

b. The Department may initiate a change in the point(s) of compliance if there is a change in, or new information regarding, the mining activity or any of the factors set forth in Subsection 401.03, and the Department determines that the change is necessary to ensure there is no injury to current or projected future beneficial uses of ground water and no violation of water quality standards applicable to any interconnected surface waters. The Department shall notify the mine operator in writing of the Department's intent to change the point(s) of compliance. The Department shall make its final decision to change the point(s) of compliance within sixty (60) days of the notice to the mine operator unless the Department and the mine operator agree more time is necessary to make the decision. ()

c. The Department may require additional or new ground water monitoring or indicator wells when the Department changes the point(s) of compliance. The Department may also require additional or different ground water monitoring or indicator wells if the Department determines, based upon a change in or new information

regarding the mining activity or any of the factors listed in Subsection 401.03, that the monitoring no longer meets the requirements set forth in Subsection 401.04. The mine operator may also request a change in the monitoring.

()

402. -- 999. (RESERVED)

**58.01.12 – RULES FOR ADMINISTRATION OF WASTEWATER
AND DRINKING WATER LOAN FUNDS**

000. LEGAL AUTHORITY.

The Idaho Board of Environmental Quality, pursuant to authority granted in Chapters 1, 36, and 76, Title 39, Idaho Code, did adopt the following rules for the administration of the Wastewater and Drinking Water Loan Funds. ()

001. TITLE AND SCOPE.

01. Title. These rules are titled IDAPA 58.01.12, “Rules for Administration of Wastewater and Drinking Water Loan Funds.” ()

02. Scope. The provisions of these rules will establish administrative procedures and requirements for establishing, implementing and administering two (2) state loan programs for providing financial assistance to eligible applicants of wastewater and drinking water projects. The U.S. Environmental Protection Agency provides annual capitalization grants to the state of Idaho for these programs. Financial assistance projects must be in conformance with the requirements of the Subchapter VI of the federal Clean Water Act (33 U.S.C. Sections 1381 et seq.) and the Safe Drinking Water Act (42 U.S.C. Section 300j et seq.). ()

002. (RESERVED)

003. ADMINISTRATIVE APPEALS.

Persons may be entitled to appeal agency actions authorized under these rules pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure Before the Board of Environmental Quality.” ()

004. INCORPORATION BY REFERENCE AND AVAILABILITY OF REFERENCED MATERIAL.

01. Incorporation by Reference. These rules do not contain documents incorporated by reference. ()

02. Availability of Referenced Material. The “Clean Water State Revolving Fund Handbook” and the “Drinking Water Loan Account Handbook” (Handbooks) are available at the Idaho Department of Environmental Quality, 1410 N. Hilton, Boise, ID 83706-1255, (208) 373-0502, or DEQ website <http://www.deq.idaho.gov>. ()

005. CONFIDENTIALITY.

Information obtained by the Department under these rules is subject to public disclosure pursuant to the provisions of Chapter 1, Title 74, Idaho Code, and IDAPA 58.01.21, “Rules Governing the Protection and Disclosure of Records in the Possession of the Idaho Department of Environmental Quality.” ()

006. POLICY.

It is the policy of the Idaho Board of Environmental Quality through the Idaho Department of Environmental Quality, to administer the Wastewater Loan Fund for the purpose of protecting and enhancing the quality and value of the water resources of the state of Idaho by financially assisting in the prevention, control and abatement of water pollution and the Drinking Water Loan Fund for the purpose of providing assistance to eligible public drinking water systems for the planning, design, and construction of facilities to ensure safe and adequate drinking water. It is also the intent of the Idaho Board of Environmental Quality to assign a priority rating to those projects that will most significantly improve the quality of the waters of the state and most adequately protect the public health. ()

007. DEFINITIONS.

For the purpose of the rules contained in this chapter, the following definitions apply: ()

01. Applicant.

a. When used in the context of wastewater loan fund, applicant is defined as a municipality or nonpoint source project sponsor that has the ability to establish and maintain a loan repayment source. Individuals and for-profit corporations are not eligible. ()

b. When used in the context of drinking water loan fund, applicant is defined as any eligible system making application for drinking water loan funds. ()

02. Best Management Practice. A practice or combination of practices, techniques or measures developed, or identified, by the designated agency and identified in the state water quality management plan which are determined to be the most cost-effective and practicable means of preventing or reducing the amount of pollution

- generated by nonpoint sources to a level compatible with water quality needs. ()
- 03. Board.** The Idaho Board of Environmental Quality. ()
- 04. Categorical Exclusion (CE).** Category of actions which do not individually or cumulatively have a significant effect on the human environment and for which, therefore, neither an environmental information document nor an environmental impact statement is required. ()
- 05. Close or Closing.** The date on which the loan recipient issues and physically delivers to the Department the bond or note evidencing the loan to the loan recipient, specifically determining the principal, interest and fee amounts that shall be repaid and the schedule for payment. ()
- 06. Collector Sewer.** That portion of the wastewater treatment facility whose primary purpose is to receive sewage from individual residences and other individual public or private structures and which is intended to convey wastewater to an interceptor sewer or a treatment plant. ()
- 07. Community Water System.** A public drinking water system that: ()
- a.** Serves at least fifteen (15) service connections used by year round residents of the area served by the system; or ()
- b.** Regularly serves at least twenty-five (25) year-round residents. ()
- 08. Construction.** The erection, building, acquisition, alteration, reconstruction, improvement or extension of wastewater treatment or drinking water facilities, including preliminary planning to determine the economic and engineering feasibility, the engineering, architectural, legal, fiscal and economic investigations, reports and studies, surveys, designs, plans, working drawings, specifications, procedures, and other action necessary in the construction of wastewater treatment or drinking water facilities; the inspection and supervision of the construction; and start-up of the associated facilities. ()
- 09. Contaminant.** Any physical, chemical, biological, or radiological substance or matter in water. ()
- 10. Department.** The Idaho Department of Environmental Quality. ()
- 11. Director.** The Director of the Idaho Department of Environmental Quality or his/her designee. ()
- 12. Disadvantaged Community.** The service area of a wastewater treatment facility or a public water system that meets affordability criteria established by the Department of Environmental Quality after public review and comment. ()
- 13. Disadvantaged Loans.** Loans made to a disadvantaged community. ()
- 14. Distribution System.** Any combination of pipes, tanks, pumps, and other equipment that delivers water from the source(s), treatment facility(ies), or a combination of source(s) and treatment facility(ies) to the consumer. Chlorination may be considered as a function of a distribution system. ()
- 15. Eligible Costs.** Costs which are necessary for planning, designing and/or constructing drinking water or wastewater treatment facilities, or implementation of water pollution control projects. To be eligible, costs must be reasonable and not ineligible costs. The determination of eligible costs shall be made by the Department pursuant to Section 041. ()
- 16. Environmental Impact Statement (EIS).** A document prepared by the applicant when the Department determines that the proposed construction project may significantly affect the environment. The major purpose of the EIS will be to describe fully the significant impacts of the project and how these impacts can be either avoided or mitigated. The environmental review procedures contained in Chapter 5 of the Handbooks may be used as

guidance when preparing the EIS. ()

17. Environmental Information Document (EID). Any written environmental assessment prepared by the applicant describing the environmental impacts of a proposed wastewater or drinking water construction project. This document will be of sufficient scope to enable the Department to assess the environmental impacts of the proposed project and ultimately determine if an EIS is warranted. ()

18. Financial Management System. Uniform method of recording, summarizing and analyzing financial information about the loan applicant. ()

19. Finding of No Significant Impact (FONSI). A document prepared by the Department presenting the reasons why an action, not otherwise excluded, will not have a significant effect on the human environment and for which an EIS will not be prepared. It shall include the environmental assessment or a summary of it and shall note any other environmental documents related to it. ()

20. Handbook(s). The “Clean Water State Revolving Fund Handbook” and/or the “Drinking Water Loan Account Handbook.” ()

21. Implementation Plan. Completed project implementation plan or work plan provides detailed documentation of the proposed project including list of tasks, schedule of tasks, agency/contractor/entity responsible for implementation of the project tasks, adequate time schedules for completion of all budget tasks, and the anticipated results of the project. ()

22. Ineligible Costs. Costs which are not eligible for funding pursuant to these rules. ()

23. Interceptor Sewer. That portion of the wastewater treatment facility whose primary purpose is to transport domestic sewage or nondomestic wastewater from collector sewers to a treatment plant. ()

24. Loan Recipient. An applicant who has been awarded a loan. ()

25. Managerial Capability. The capability of the loan applicant to support the proper financial and technical operation of the system. ()

26. Maximum Contaminant Level (MCL). The maximum permissible level of a contaminant in water which is delivered to any user of a public water system. ()

27. Noncommunity Water System. A public water system that is not a community water system. ()

28. Nondomestic Wastewater. Wastewaters originating primarily from industrial or commercial processes which carry little or no pollutants of human origin. ()

29. Nonpoint Source Pollution. Water pollution that enters the waters of the state from nonspecific and diffuse sources and is the result of runoff, precipitation, drainage, seepage, hydrological modification or land disturbing activities. ()

30. Nonpoint Source Project Sponsor. Any applicant for wastewater loan funds to address nonpoint source pollution. ()

31. Operation and Maintenance Manual. For wastewater or drinking water facilities, a guidance and training manual outlining the optimum operation and maintenance of the facilities and their components. For nonpoint source water pollution control projects, a plan that incorporates applicable sections of the Natural Resources Conservation Service Field Office Technical Guide, for implementation of best management practices. ()

32. Planning Document. A document which describes the condition of a public wastewater or drinking water system and presents a cost effective and environmentally sound alternative to achieve or maintain regulatory compliance. Engineering reports and facility plans are examples of such planning documents. The

planning documents shall be prepared by or under the responsible charge of an Idaho licensed professional engineer and shall bear the imprint of the engineer's seal. Requirements for planning documents prepared using loan funds are provided in Section 030 of these rules and in the Handbooks. ()

33. Plan of Operation. A schedule of specific actions and completion dates for construction, start-up and operation of the facility or for implementation of wastewater or drinking water projects. ()

34. Point Source. Any discernible, confined and discrete conveyance, including but not limited to any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are, or may be discharged to the waters of the state. This term as used in these rules does not include return flows from irrigated agriculture, discharges from dams and hydroelectric generating facilities or any source or activity considered a nonpoint source by definition. ()

35. Pollutant. Any chemical, biological, or physical substance whether it be solid, liquid, gas, or a quality thereof, which if released into the environment can, by itself or in combination with other substances, create a nuisance or render that environment harmful, detrimental, or injurious to public health, safety or welfare or to domestic, commercial, industrial, recreational, aesthetic or other beneficial uses. ()

36. Priority List. An integrated list of proposed wastewater treatment facility and nonpoint source pollution control projects rated as described in Section 020; or a list of proposed drinking water projects rated by severity of risk to public health, the necessity to ensure compliance with IDAPA 58.01.08, Idaho Rules for Public Drinking Water Systems, and the Safe Drinking Water Act (42 U.S.C. Section 300j et seq.), population affected, and need on a household basis for protection of Idaho's public drinking water. ()

37. Public Drinking Water System/Public Water System/Water System. A system for the provision to the public of water for human consumption through pipes or, after August 5, 1998, other constructed conveyances, if such system has at least fifteen (15) service connections, regardless of the number of water sources or configuration of the distribution system, or regularly serves an average of at least twenty-five (25) individuals daily at least sixty (60) days out of the year. Such term includes: any collection, treatment, storage, and distribution facilities under the control of the operator of such system and used primarily in connection with such system; and any collection or pretreatment storage facilities not under such control which are used primarily in connection with such system. Such term does not include any "special irrigation district." A public water system is either a "community water system" or a "noncommunity water system." ()

38. Readiness to Proceed. The progress which a loan applicant has made towards completion of time-consuming tasks necessary to complete a loan application (e.g. bond election, local improvement district formation, judicial confirmation towards debt authority, completion of facility plan). ()

39. Reserve Capacity. That portion of the facility that is designed and incorporated in the constructed facilities to handle future demand upon the system. ()

40. Sewer Use Ordinance/Sewer Use Resolution. An ordinance or resolution that requires new sewers and connections to be properly designed and constructed, prohibits extraneous sources of inflow and prohibits introduction of wastes into the sewer in an amount that endangers the public safety or the physical or operational integrity of the wastewater treatment facility. ()

41. State. The state of Idaho. ()

42. Supplemental Grants. A state funded grant awarded in conjunction with a loan from the water pollution control loan account. ()

43. Suspension. An action by the Director to suspend a loan contract prior to project completion for a specified cause. Suspended contracts may be reinstated. ()

44. Sustainability. Sustainability will include efforts for energy and water conservation, extending the life of capital assets, green building practices, and other environmentally innovative approaches to infrastructure repair, replacement and improvement. ()

45. Termination. An action by the Director to permanently terminate a loan contract prior to project completion for a specific cause. Terminated contracts will not be reinstated. ()

46. User Charge System. A system of rates and service charges applicable to specific types of users, including any legal enforcement mechanism as may be required and which provides sufficient reserves and/or revenues for debt retirement, operation and maintenance, and replacement of the installed equipment or structures. ()

47. Wastewater. A combination of the liquid and water-carried wastes from dwellings, commercial buildings, industrial plants, institutions and other establishments, together with any groundwater, surface water and storm water that may be present; liquid and water that is physically, chemically, biologically, or rationally identifiable as containing excreta, urine, pollutants or domestic or commercial wastes; sewage. ()

48. Wastewater Treatment Facility. Any facility, including land, equipment, furnishings and appurtenances thereof, used for the purpose of collecting, treating, neutralizing or stabilizing wastewater and removing pollutants from wastewater including the treatment plant, collectors, interceptors, outfall and outlet sewers, pumping stations, sludge treatment and handling systems, land disposal systems; a sewage treatment plant. ()

49. Water Pollution Control Project. Any project that contributes to the removal, curtailment, or mitigation of pollution of the surface waters or groundwater of the state, or the restoration of the quality of said waters, and conforms to any applicable planning document which has been approved and/or adopted such as the State Water Quality Management Plan. This includes the planning, design, construction/implementation or any other distinct stage or phase of a project. ()

50. Water System Protection Ordinance. An ordinance adopted pursuant to Chapter 32, Title 42, Idaho Code, or other applicable law that requires new connections to be properly designed and constructed, which prohibits cross-connections with non-potable water sources and in all ways protects the water system from injection of contaminants, and that provides for fees for service from users or classes of users. ()

008. ELIGIBLE SYSTEMS.

01. Basic Drinking Water Considerations. Public and private community water systems and nonprofit noncommunity water systems. ()

02. Basic Wastewater Considerations. Municipal or non-profit owned wastewater point source treatment facilities, lagoons, reuse facilities, and systems using nonpoint source methodologies of wastewater disposal. ()

03. Assistance to Ensure Compliance. Public water systems not eligible for project loans may receive assistance if: ()

a. The use of the assistance will ensure compliance; ()

b. The owner or operator of the system agrees to undertake feasible and appropriate changes in operations (including ownership, management, accounting, rates, maintenance, consolidation, alternative water supply, or other procedures); ()

c. The Department determines that the measures are necessary to ensure that the system has the technical, managerial, and financial capability to comply with state and federal drinking water requirements over the long term; and ()

d. Prior to providing assistance under this section to a public water system that is in significant noncompliance with any requirement of IDAPA 58.01.08, "Idaho Rules for Public Drinking Water Systems," and the Safe Drinking Water Act (42 U.S.C. Section 300j et seq.), the Department conducts a review to determine whether this section applies to the system. ()

009. INELIGIBLE SYSTEMS.

- 01. Basic Considerations.** Systems not eligible for project loans are described in Subsection 009.02. ()
- 02. Systems Not Eligible.** The following systems will not be considered eligible for project loans: ()
- a.** Wastewater systems that are owned by individuals or for-profits; ()
 - b.** Drinking water systems in significant noncompliance with any requirement of IDAPA 58.01.08, “Idaho Rules for Public Drinking Water Systems,” and the Safe Drinking Water Act (42 U.S.C. Section 300j et seq.); ()
 - c.** Drinking water systems under disapproval designation as outlined in IDAPA 58.01.08, “Idaho Rules for Public Drinking Water Systems”; or ()
 - d.** Systems delinquent in payment of fines, state revolving fund loans, penalties, or fee assessments due to DEQ. ()

010. FINANCIAL AND MANAGEMENT CAPABILITY ANALYSIS.

No loans shall be awarded for projects unless the applicant has demonstrated and certified that it has the legal, technical, managerial, and financial capabilities as provided for in these rules to ensure construction, operation and maintenance, and to repay principal and interest which would be due on a loan. ()

01. Information Needed. Before an application will be considered complete, the applicant must submit all necessary information on a form prescribed by the Department along with substantiating documentation. The information may include, but not be limited to, demographic information of the applicant, estimated construction or implementation costs, annual operating costs, and information regarding the financing of the project, including the legal debt limit of the applicant and the existence and amount of any outstanding bonds or other indebtedness which may affect the project. ()

02. Incorporated Nonprofit Applicants. ()

a. In addition to all other information required to be submitted by these rules, an incorporated nonprofit applicant must demonstrate to the satisfaction of the Department by its articles of incorporation and/or bylaws, that: ()

- i.** The corporation is nonprofit and lawfully incorporated pursuant to Chapter 3, Title 30, Idaho Code; ()
- ii.** The corporation is authorized to incur indebtedness to construct, improve or repair wastewater or drinking water facilities and/or implement water pollution control nonpoint source projects; ()
- iii.** The corporation is authorized to secure indebtedness by pledging corporation assets, including any revenues raised through a user charge system; ()
- iv.** The corporation exists either perpetually or for a period long enough to repay a project loan; and ()
- v.** The corporation is capable of raising revenues sufficient to repay a loan. ()

b. The Department may impose conditions on the making of a facility loan or water pollution control nonpoint source project to an incorporated nonprofit applicant which are necessary to carry out the provisions of these rules and the provisions of Chapter 36 or 76, Title 39, Idaho Code. ()

03. Cost Allocation. An applicant proposing a wastewater, drinking water or nonpoint source project

designed to serve two (2) or more entities must show how the costs will be allocated among the participating entities. Such applicants must provide an executed intermunicipal service agreement which, at a minimum, incorporates the following information: ()

- a. The basis upon which the costs are allocated; ()
- b. The formula by which the costs are allocated; and ()
- c. The manner in which the cost allocation system will be implemented. ()

04. Waivers. The requirement in Section 010 may be waived by the Department if the applicant can demonstrate: ()

- a. Such an agreement is already in place; ()
- b. There is documentation of a service relationship in the absence of a formal agreement; or ()
- c. An applicant exhibits sufficient financial strength to continue the project if one (1) or more of the applicants fails to participate. ()

011. -- 019. (RESERVED)

020. PRIORITY RATING SYSTEM.

Projects are identified for placement on priority lists by surveying eligible entities directly on an annual basis. Limited loan funds are awarded to projects based on priority ratings and readiness to proceed. Projects are rated by the Department on a standard priority rating form using public health, sustainability, the condition of the existing system and water quality criteria. ()

01. Purpose. A priority rating system shall be utilized by the Department to annually allot available funds to wastewater and drinking water projects determined eligible for funding assistance under these rules. ()

02. Wastewater Priority Rating. The priority rating system shall be based on a numerical point system. Priority criteria shall contain the following points: ()

a. Public health emergency or hazard certified by the Idaho Board of Environmental Quality, the Department, a District Health Department or by a District Board of Health – one hundred and fifty (150) points. ()

b. Regulatory compliance issues (e.g., noncompliance and resulting legal actions relating to infrastructure deficiencies at a wastewater facility) -- up to one hundred (100) points. ()

c. Watershed restoration (e.g., implementation of best management practices or initiation of construction at wastewater collection and treatment facilities as part of an approved total maximum daily load plan, implementation of nonpoint source management actions in protection of a threatened water, or is part of a special water quality effort) -- up to one hundred (100) points. ()

d. Watershed protection from impacts (e.g., improvement of beneficial use(s) in a given water body, evidence of community support, or recognition of the special status of the affected water body) -- up to one hundred (100) points. ()

e. Preventing impacts to uses (nonpoint source pollution projects) -- up to one hundred (100) points. ()

f. Sustainability efforts (e.g., prospective efforts at energy conservation, water conservation, extending the life of capital assets, green building practices, and other environmentally innovative approaches to infrastructure repair, replacement and improvement) -- up to fifty (50) points. ()

- g.** Affordability (current system user charges exceed state affordability guidelines) -- ten (10) points. ()
- 03. Drinking Water Priority Rating.** The priority rating system shall be based on a numerical points system. Priority criteria shall contain the following points. ()
- a.** Public Health Hazard. Any condition that creates, or may create, a danger to the consumer's health, which may include any one (1) or more of the following, may be awarded a maximum of one hundred (100) points: ()
- i.** Documented unresolved violations of the primary drinking water standards including maximum contaminant levels, action levels, and treatment techniques (to include maximum contaminant levels for acute and chronic contaminants); ()
- ii.** Documented unresolved violations of pressure requirements; ()
- iii.** Documented reduction in source capacity that impacts the system's ability to reliably serve water; ()
- iv.** Documented significant deficiencies (e.g., documented in a sanitary survey) in the physical system that are causing the system to not reliably serve safe drinking water; or ()
- v.** Documented unregulated contaminants that have been shown by EPA to be a risk to public health. ()
- b.** General Conditions of Existing Facilities. Points shall be given based on deficiencies, which would not constitute a public health hazard, for pumping, treating, and delivering drinking water - up to sixty (60) points. ()
- c.** Sustainability Efforts (e.g., prospective efforts at energy conservation, water conservation, extending the life of capital assets, green building practices, and other environmentally innovative approaches to infrastructure repair, replacement and improvement) - up to fifty (50) points. ()
- d.** Consent Order, Compliance Agreement Schedule, or Court Order. Points shall be given if the system is operating under and in compliance with a Consent Order, Compliance Agreement Schedule, or Court Order and the proposed construction project will address the Consent Order, Compliance Agreement Schedule, or Court Order - up to thirty (30) points. ()
- e.** Incentives. Bonus points shall be awarded to systems that promote source water protection, conservation, economy, proper operation maintenance, and monitoring - up to ten (10) points. ()
- f.** Affordability. Points shall be given when current system user charges exceed state affordability guidelines - ten (10) points. ()
- 04. Rating Forms.** Rating criteria for Section 020 set forth in rating forms that are available in the Handbooks. ()
- 05. Priority List.** A list shall be developed from projects rated according to Section 020, submitted for public review and comment, and submitted to the Board for approval. ()
- a.** Priority Reevaluation. Whenever significant changes occur, which in the Department's judgment would affect the design parameters or treatment requirements by either increasing or decreasing the need for or scope of any project, a reevaluation of that priority rating will be conducted. ()
- b.** Project Bypass. A project that does not or will not meet the Department schedule that allows for timely utilization of loan funds may be bypassed, substituting in its place the next highest ranking project(s) that is

ready to proceed. An eligible applicant that is bypassed will be notified in writing of the reasons for being bypassed. ()

06. Amendment of a Priority List. The Director may amend a Priority List as set forth in Section 995 of these rules. ()

021. DISADVANTAGED LOANS.

Disadvantaged Loan Awards. In conjunction with the standard loans, the Department may award disadvantaged loans to applicants deemed disadvantaged using the following criteria: ()

01. Qualifying for a Disadvantaged Loan. In order to qualify for a disadvantaged loan, a loan applicant must have a residential user rate for either drinking water or wastewater services that exceed two percent (2%) of the applicant community's median household income or, if the user rate is between one and one-half percent (1½%) and two percent (2%) of the applicant community's median household income, the community must also have: unemployment that exceeds the state average; and a decreasing population. The applicant shall agree to a thirty (30) year loan unless the design life of the project is documented to be less than thirty (30) years. The annual user rate would be based on all operating, maintenance, replacement, and debt service costs (both for the existing system and for upgrades). If the applicant's service area is not within the boundaries of a municipality, or if the applicant's service area's median household income is not consistent with the municipality as a whole, the applicant may use the census data for the county in which it is located or may use a representative survey, conducted by a Department approved, objective third party, to verify the median household income of the applicant's service area. ()

02. Adjustment of Loan Terms. DEQ will equally apportion funds available for principal forgiveness to all prospective disadvantaged loan recipients. For wastewater loan funding, the length of the repayment period is set at the borrower's discretion, up to the maximum repayment period of thirty (30) years. For drinking water loan funding, extensions of repayment term to thirty (30) years are only allowed for disadvantaged applicants. Consistent with achieving user rates as per the criteria set forth in Section 021, and where possible with available funds, loan terms may be adjusted in the following order: decreasing the interest rate and providing principal forgiveness. ()

a. Decreasing Interest Rate. The loan interest rate may be reduced from the rate established by the Director for standard loans to a rate that results in an annual user rate equaling the criteria set forth in Section 021. The interest rate may be reduced to as low as zero percent (0%). ()

b. Principal Forgiveness. If even at zero percent (0%) interest, the annual user rate per residential user still exceeds the criteria set forth in Section 021, then the principal that causes the user charge to exceed the criteria set forth in Section 021 may be partially forgiven or reduced. The principal reduction cannot exceed fifty percent (50%) of the total loan, unless the user rate will exceed \$100 per month (in which case the principal reduction may exceed fifty percent (50%)). Principal forgiveness terms may be revised (from initial estimates established in the annual Intended Use Plan) based upon final construction costs, such that loan terms do not result in user rates that are below the criteria set forth in Section 021. ()

022. SUPPLEMENTAL GRANTS.

In conjunction with loans, the Department may award state funded supplemental grants, not to exceed ninety percent (90%) of total eligible costs, to loan recipients in the following manner: ()

01. Projects Not Funded by Loans. Planning and design projects may receive grant assistance up to ninety percent (90%) funding of eligible costs not funded by a loan; and ()

02. Costs in Excess of Financial Ability. ()

a. Loan recipients may receive supplemental grant assistance for eligible costs that exceed the amount a loan recipient is able to pay. In order to qualify for a supplemental grant, a loan recipient must have the following: ()

i. An annual user rate per household which exceeds one and one-half percent (1 1/2%) of the median household income from the most recent census data. If the loan recipient's service area is not within the boundaries of

a municipality, the loan recipient may use the census data for the county in which it is located or may use an income survey approved by the Department; and ()

ii. The annual user rate includes all operating, maintenance, replacement and debt service costs, both for the existing system and for upgrades. ()

b. If a loan recipient meets the requirement of Section 022, a supplemental grant may be made for the amount of the project that causes the annual user rate for wastewater service per household to exceed one and one-half percent (1 1/2%) of the median household income, subject to available funds. ()

023. -- 029. (RESERVED)

030. PROJECT SCOPE AND FUNDING.

Loan funds awarded under this program may be used to prepare a facility planning document which identifies the cost effective and environmentally sound alternative to achieve or maintain compliance with IDAPA 58.01.08, "Idaho Rules for Public Drinking Water Systems," the Safe Drinking Water Act, 42 U.S.C., Sections 300j et seq., IDAPA 58.01.16, "Wastewater Rules," and the Clean Water Act, 33 U.S.C. Sections 1381 et seq., and which is approvable by the Department. Loan funds may also be used for design and construction of the chosen alternative. ()

01. Nonpoint Source Implementation Funding. Eligible nonpoint source water pollution control projects may be funded when all of the following criteria are met: ()

a. Consistent with and implements the Idaho Nonpoint Source Management Plan. ()

b. Data is used to substantiate a nonpoint source pollutant problem or issue exists and is described or directly referenced. ()

c. Completed project implementation plan or work plan. ()

d. Project commitment documentation through demonstrated ability for loan repayment. ()

e. The project includes documentation that the project owner(s), manager(s), or the sponsoring agency will maintain the project for the life of the project (e.g., Maintenance Agreement). ()

f. The project provides adequate tracking and evaluation of the effectiveness of the water quality improvements being funded by either the project owner/manager or the sponsoring agency throughout the life of the project. ()

g. The project demonstrates nexus/benefit to municipality through a letter of support from one (1) or more affected municipalities. ()

02. Facility Funding. Projects may be funded in steps: ()

a. Step 1. Planning document prepared in accordance with the Handbook. ()

b. Step 2. Design which includes the preparation of the detailed engineering plans and specifications necessary for the bidding and construction of the project. ()

c. Step 3. Construction, which includes bidding and actual construction of the project. ()

d. Step 4. A combination of Step 2 and Step 3. ()

e. Combination Step Funding. Projects may be funded in any combination of the steps with the approval of the Department. Separate loans may be awarded for Step 1 or Step 2 projects. If a Step 1 or Step 2 project proceeds to construction, either the Step 1 or Step 2 loan, or both, may be consolidated with the Step 3 loan. If a project does not proceed to construction, outstanding Step 1 and Step 2 loans will be amortized and a repayment schedule prepared by the Department. ()

f. Cost Effective Requirement. Step 2, Step 3 or Step 4 loans shall not be awarded until a final cost effective and environmentally sound alternative has been selected by the Step 1 planning document and approved by the Department. If the planning document has not been completed pursuant to IDAPA 58.01.22, “Rules for Administration of Planning Grants for Drinking Water and Wastewater Facilities,” then the loan recipient shall provide an opportunity for the public to comment on the draft planning document. The public comment period shall be held after alternatives have been developed and the Department has approved the draft planning document. The loan recipient shall provide written notice of the public comment period and hold at least one (1) public meeting within the jurisdiction of the loan recipient during the public comment period. At the public meeting, the draft planning document shall be presented by the loan recipient with an explanation of the alternatives identified. The cost effective and environmentally sound alternative selected shall consider public comments received from those affected by the proposed project. After the public meeting and public comment period, the final alternative will be selected and the Environmental Information Document will be prepared. ()

g. Funding For Wastewater Reserve Capacity. Funding for reserve capacity of a treatment plant will not exceed a twenty (20) year population growth and funding for reserve capacity of an interceptor will not exceed a forty (40) year population growth as determined by the Department. ()

h. Funding for Drinking Water Reserve Capacity. Funding for reserve capacity of a drinking water system shall not exceed a twenty (20) year population growth, except that distribution and transmission lines which may be planned for a forty (40) year useful life. ()

031. LIMITATION OF PRELOAN ENGINEERING REVIEWS.

Preloan engineering documents prepared by consulting engineers will be reviewed by Department staff only when accompanied by a certificate that the consulting engineer carries professional liability insurance in accordance with Section 050. ()

032. LOAN FEE.

01. Loan Fee. The Department may elect to impose a loan fee when necessary to offset the costs of administering the loan program, to provide planning assistance, or to otherwise facilitate the operation of the loan efforts. The loan fee shall not exceed one percent (1%) of the unpaid balance of the loan at the time each loan payment is due. ()

02. Effect on Loan Interest Rate. The loan interest rate, as described in Section 050, will be reduced by the corresponding percentage of the loan fee. ()

03. Payment of Loan Fee. The loan fee shall be due and payable concurrently with scheduled loan principal and interest repayments over the repayment period. ()

033. -- 039. (RESERVED)

040. LOAN APPLICATION AND REVIEW.

01. Submission of Application. Those eligible systems that received high priority ranking and are ready to proceed shall be invited to submit an application. The applicant shall submit to the Department, a completed application on a form as prescribed by the Department. ()

02. Application Requirements. Applications shall contain the following documentation, as applicable: ()

a. A lawful resolution passed by the governing body authorizing an elected official or officer of the applicant to execute a loan contract and sign subsequent loan disbursement requests; ()

b. Contracts for engineering or other technical services and the description of costs and tasks set forth therein shall be in sufficient detail for the Department to determine whether the costs associated with the tasks are eligible costs pursuant to Section 041; ()

- c.** Justification for the engineering firm selected. An engineering firm selected by the applicant must at a minimum: ()
- i.** Be a registered professional engineer currently licensed by the Idaho Board of Professional Engineers and Land Surveyors; ()
 - ii.** Not be debarred or otherwise prevented from providing services under another federal or state financial assistance program; and ()
 - iii.** Be covered by professional liability insurance in accordance with Section 050 of these rules. A certification of liability insurance shall be included in the application; ()
- d.** A description of other costs, not included in the contracts for engineering or other technical services, for which the applicant seeks funding. The description of the costs and tasks for such costs must be in sufficient detail for the Department to determine whether the costs are eligible costs pursuant to Section 041; ()
- e.** A demonstration that the obligation to pay the costs for which funding is requested is the result or will be the result of the applicant's compliance with applicable competitive bidding requirements for construction and requirements for professional service contracts, including without limitation, the requirements set forth in Sections 67-2801 et seq., 67-2320, 59-1026, and 42-3212, Idaho Code; ()
- f.** Step 1 -- Scope of work describing the work tasks to be performed in the preparation of the planning document if required in accordance with Section 030, a schedule for completion of the work tasks and an estimate of staff hours and costs to complete the work tasks; ()
- g.** Step 2 -- Design, or Step 4 -- Design and Construction: ()
- i.** Planning document, including a final environmental document and decision in accordance with Section 042; ()
 - ii.** Financial and management capability analysis as provided in Section 010; and ()
 - iii.** Intermunicipal service agreements between all entities within the scope of the project, if applicable; ()
- h.** Step 3 -- Construction: ()
- i.** Documented evidence of all necessary easements and land acquisition; ()
 - ii.** Biddable plans and specifications of the approved wastewater treatment facility alternative; ()
 - iii.** A plan of operation and project schedule; ()
 - iv.** A user charge system, sewer use or water system protection ordinance and financial management system; and ()
 - v.** A staffing plan and budget; ()
- i.** Step 4 -- Design and Construction. Loan applicants must submit all documentation specified in Section 040 prior to advertising for bids on construction contracts; ()
- j.** Nonpoint Source Implementation Funding: ()
- i.** Information demonstrating that the project is consistent with and implements the Idaho Nonpoint Source Management Plan; ()

- ii. Data that substantiates a nonpoint source pollution problem or issue exists; ()
- iii. A project implementation plan or workplan; ()
- iv. Project commitment documentation that demonstrates the ability for loan repayment; ()
- v. Documentation that the project owner, manager or sponsoring agency will maintain the project for the life of the project; ()
- vi. A demonstration that there will be adequate tracking and evaluation of the effectiveness of the water quality improvements being funded by either the project owner/manager or the sponsoring agency throughout the life of the project; and ()
- vii. A description of the nexus/benefit to a municipality and a letter of support from one (1) or more affected municipalities. ()

03. Determination of Completeness of Application. The Department will review the application to determine whether it includes all of the information required by Section 040. ()

04. Notification of Incompleteness of Application. Written notification if an application is incomplete, including an explanation of missing documentation will be sent to the applicant. The applicant may provide the missing documentation. ()

05. Reapplication for Loan. The action of disapproving, recalling or terminating a loan in no way precludes or limits the former applicant from reapplying for another loan when the project deficiencies are resolved and project readiness is secured. ()

041. DETERMINATION OF ELIGIBILITY OF COSTS.

The Department will review the application, including any contracts required to be submitted with the application, to determine whether the costs are eligible costs for funding. ()

01. Eligible Costs. Eligible costs are those determined by the Department to be: ()

- a. Necessary costs; ()
- b. Reasonable costs; and ()
- c. Costs that are not ineligible as described in Section 041. ()

02. Necessary Costs. The Department will determine whether costs are necessary by comparing the tasks for which the costs will be incurred to the scope of the project as described in the plan of study for facility planning documents, the project implementation plan or work plan for nonpoint source projects, and any other relevant information in the application that describes the scope of the project to be funded. ()

03. Reasonable Costs. Costs will be determined by the Department to be reasonable if the obligation to pay the costs is the result of or will be the result of the applicant's compliance with applicable competitive bidding requirements for construction and requirements for professional service contracts, including without limitation, the requirements set forth in Sections 67-2801 et seq., 67-2320, 59-1026, and 42-3212, Idaho Code. ()

04. Examples of Costs That May Be Eligible. Examples of costs that may be eligible, if determined necessary, reasonable and not ineligible costs include: ()

- a. Costs of salaries, benefits, and expendable material the applicant incurs in the project except ordinary operating expenses of local government, such as salaries and expenses of mayors, city council members, attorneys, commissioners, board members, or managers; ()
- b. Costs under construction contracts bid and executed in compliance with state public works

- construction laws; ()
- c.** Professional and consulting services utilizing a lump sum contract, a negotiated hourly rate contract, a time and materials contract, or cost plus a fixed fee contract; ()
 - d.** Planning directly related to the projects; ()
 - e.** System evaluations; ()
 - f.** Financial and management capability analysis; ()
 - g.** Preparation of construction drawings, specifications, estimates, and construction contract documents; ()
 - h.** Landscaping; ()
 - i.** Removal and relocation or replacement of utilities for which the applicant is legally obligated to pay; ()
 - j.** Material acquired, consumed, or expended specifically for the project; ()
 - k.** A reasonable inventory of laboratory chemicals and supplies necessary to initiate plant operations; ()
 - l.** Preparation of an operation and maintenance manual; ()
 - m.** Preparation of a plan of operation; ()
 - n.** Start-up services; ()
 - o.** Project identification signs; ()
 - p.** Public participation for alternative selection; ()
 - q.** Development of user charge and financial management systems; ()
 - r.** Development of sewer use or water system protection ordinance; ()
 - s.** Staffing plans and budget development; ()
 - t.** Certain direct and other costs as determined eligible by the Department; ()
 - u.** Costs of complying with the Federal Water Pollution Control Act (P.L. 92-500) as amended, 33 USC Section 1251 et seq. and the Safe Drinking Water Act (42 U.S.C. Section 300j et seq, loan requirements applied to specific projects; and ()
 - v.** Site acquisition costs, including right of way, plant site, wastewater land application sites and sludge disposal areas. Land purchase shall be from a willing seller. ()
- 05. Ineligible Project Costs.** Costs which are ineligible for funding include, but are not limited to: ()
- a.** Basin or area wide planning not directly related to the project; ()
 - b.** Bonus payments not legally required for completion of construction before a contractual completion date; ()

- c. Personal injury compensation or damages arising out of the project; ()
- d. Fines or penalties due to violations of, or failure to comply with, federal, state, or local laws; ()
- e. Costs outside the scope of the approved project; ()
- f. Ordinary operating expenses of local government, such as salaries and expenses of mayors, city council members, attorneys, commissioners, board members, or managers; ()
- g. Construction of privately owned wastewater treatment facilities; ()
- h. Cost of land in excess of that needed for the proposed project; ()
- i. Cost of refinancing existing indebtedness; ()
- j. Engineering costs incurred without professional liability insurance; ()
- k. Costs of condemnation; ()
- l. Reserve funds; and ()
- m. Costs incurred prior to acceptance of the loan unless specifically approved in writing as eligible pre-award costs by the Department. ()

06. Notification Regarding Ineligible Costs. Prior to providing a loan offer, the Department will notify the applicant if certain costs are not eligible for funding and the reasons for the Department’s determination. If such costs are included in the engineering contract, the Department will also provide notification to the engineer. The applicant may provide the Department additional information in response to the notice. ()

07. Eligible Costs and the Loan Offer. The loan offer shall reflect those costs determined by the Department to be eligible costs. The loan offer, however, may include estimates of some eligible costs that have not yet been set, such as construction costs. Actual eligible costs may differ from such estimated costs set forth in the loan offer. In addition, loan disbursements may be increased or decreased if eligible costs are modified as provided in Section 060. ()

042. ENVIRONMENTAL REVIEW.

01. Environmental Documentation. Guidance on how to complete an environmental review is found in Chapter 5 of the applicable Handbook. For eligible projects funded solely with non-federal funds (e.g. State Revolving Loan Fund repayments), see Section 042. For eligible projects, the loan recipient shall complete an environmental review as part of and in conjunction with a planning document. Projects funded exclusively as nonpoint or estuary management projects may not be required to complete an environmental review. The loan recipient shall consult with the Department at an early stage in the loan process to determine the required level of environmental review. Based on review of existing information, and assessment of environmental impacts, the loan recipient shall complete one (1) of the following per the Department’s instruction: ()

- a. Submit a request for Categorical Exclusion (CE) with supporting backup documentation as specified by the Department; ()
- b. Prepare an Environmental Information Document (EID) in a format specified by the Department; ()
- or
- c. Prepare an Environmental Impact Statement (EIS) in a format specified by the Department. ()

02. Categorical Exclusions. If the loan recipient requests a CE, the Department will review the request and, based upon the supporting documentation, take one (1) of the following actions: ()

a. Determine if the action is consistent with categories eligible for exclusion whereupon the Department will issue a notice of CE from substantive environmental review. Once the CE is granted for the selected alternative, the Department will publish a notice of CE in a local newspaper in the geographical area of the proposed project to inform the public of this action, following which the planning document can be approved and the loan award can proceed; or ()

b. Determine if the action is not consistent with categories eligible for exclusion and that issuance of a CE is not appropriate. If a CE is not issued, the Department will notify the loan recipient to prepare an EID. ()

03. Environmental Information Document Requirements. When an EID is required, the loan recipient shall prepare the EID in accordance with the following Department procedures: ()

a. Various laws and executive orders related to environmentally sensitive resources shall be considered as the EID is prepared. Appropriate state and federal agencies shall be consulted regarding these laws and executive orders; ()

b. A full range of relevant impacts, both direct and indirect, of the proposed project shall be discussed in the EID, including measures to mitigate adverse impacts, cumulative impacts, and impacts that shall cause irreversible or irretrievable commitment of resources; and ()

c. The Department will review the draft EID and either request additional information about one (1) or more potential impacts, or draft a “finding of no significant impact” (FONSI). ()

04. Final Finding of No Significant Impact. The Department will publish the draft FONSI in a local newspaper in the geographical area of the proposed project and will allow a minimum thirty (30) day public comment period. Following the required period of public review and comment, and after any public concerns about project impacts are addressed, the FONSI will become final. The Department will assess the effectiveness and feasibility of the mitigation measures identified in the FONSI and EID prior to the issuance of the final FONSI and approval of the planning document. ()

05. Environmental Impact Statement (EIS) Requirements. If an (EIS) is required, the loan recipient shall: ()

a. Consult with all affected federal and state agencies, and other interested parties, to determine the required scope of the document; ()

b. Prepare and submit a draft EIS to all interested agencies, and other interested parties, for review and comment; ()

c. Conduct a public meeting which may be in conjunction with a planning document meeting; and ()

d. Prepare and submit a final EIS incorporating all agency and public input for Department review and approval. ()

06. Final EIS. Upon completion of the EIS by the loan recipient and approval by the Department of all requirements listed in Section 042, the Department will issue a record of decision, documenting the mitigation measures to be required of the loan recipient. The loan agreement can be completed once the final EIS has been approved by the Department. ()

07. Partitioning the Environmental Review. Under certain circumstances, the building of a component/partition of a system may be justified in advance of all environment review requirements for the remainder of the system. The Department will approve partitioning the environment review in accordance with established procedures. ()

08. Use of Environmental Reviews Conducted by Other Agencies. If environmental review for the

project has been conducted by another state, federal, or local agency, the Department may, at its discretion, issue its own determination by adopting the document and public participation process of the other agency. ()

09. Validity of Review. Environmental reviews, once completed by the Department, are valid for five (5) years from the date of completion. If a loan application is received for a project with an environmental review which is more than five (5) years old, the Department will reevaluate the project, environmental conditions and public views and will: ()

a. Reaffirm the earlier decision; or ()

b. Require supplemental information to the earlier EIS, EID, or request for CE. Based upon a review of the updated document, the Department will issue and distribute a revised notice of CE, FONSI, or record of decision. ()

10. Exemption From Review. Loan projects may be exempt from certain federal crosscutting authorities at the discretion of the Department as long as in any given year the annual amount of loans, equal to the most recent federal capitalization grant, complies with all of the federal crosscutting authorities. ()

043. -- 049. (RESERVED)

050. LOAN OFFER AND ACCEPTANCE.

01. Loan Offer. Loan offers will be delivered to successful applicants by representatives of the Department or by registered mail. ()

02. Acceptance of Loan Offer. Applicants have sixty (60) days in which to officially accept the loan offer on prescribed forms furnished by the Department. The sixty (60) day acceptance period commences from the date indicated on the loan offer notice. If the applicant does not accept the loan offer within the sixty (60) day period the loan funds may be offered to the next project of priority. ()

03. Acceptance Executed as a Contract Agreement. Upon signature by the Director and upon signature by the authorized representative of the eligible applicant, the loan offer shall become a contract. Upon accepting a loan offer, an eligible applicant becomes a loan recipient. The disbursement of funds pursuant to a loan contract is subject to a finding by the Director that the loan recipient has complied with all loan contract conditions and has prudently managed the project. The Director may, as a condition of disbursement, require that a loan recipient vigorously pursue any claims it has against third parties who will be paid in whole or in part, directly or indirectly, with loan funds. No third party shall acquire any rights against the state or its employees from a loan contract. ()

04. Estimate of Reasonable Cost. All loan contracts will include the eligible costs of the project. Some eligible costs may be estimated and disbursements may be increased or decreased as provided in Section 060. ()

05. Terms of Loan Offers. The loan offer shall contain such terms as are prescribed by the Department including, but not limited to: ()

a. Terms consistent with these rules, the project step to be funded under the loan offer, and Title 39, Chapter 36, Idaho Code; ()

b. Special clauses as determined necessary by the Department for the successful investigation, design, construction and management of the project; ()

c. Terms consistent with applicable state and federal laws pertaining to planning documents, design, and construction, including the Public Works Contractors License Act and the Public Contracts Bond Act, Chapter 19, Title 54, Idaho Code, and the federal Clean Water Act and Safe Drinking Water Act requirements for projects funded with loan moneys of federal origin; ()

d. Requirement for the prime engineering firm(s) and their principals retained for engineering

services to carry professional liability insurance to protect the public from the engineer's negligent acts and errors and omissions of a professional nature. The total aggregate of the engineer's professional liability insurance shall be one hundred thousand dollars (\$100,000) or twice the amount of the engineer's fee, whichever is greater. Professional liability insurance must cover all such services rendered for all project phases, whether or not such services or phases are state funded, until the certification of project performance is accepted by the Department; ()

e. The project shall be bid, contracted and constructed according to the current edition of Idaho Standards for Public Works Construction unless the loan recipient has approved and adopted acceptable public works construction standards approved by the Department; ()

f. The loan interest rate for loans made during the state fiscal year beginning July 1 will be established by the Director. The interest rate will be a fixed rate in effect for the life of the loan. The rate may equal but shall not exceed the current market rate; ()

g. The loan fee pursuant to Section 032; ()

h. All loans must be fully amortized within a period not to exceed thirty (30) years after project completion. The loan contract will be appended with a schedule of loan repayments stating the due dates and the amount due upon project completion. The loan recipient may elect for either a schedule of semi-annual or annual repayments at the time the loan is finalized; and ()

i. Repayment default will occur when a scheduled loan repayment is thirty (30) days past due. If default occurs, the Department may invoke appropriate loan contract provisions and/or bond covenants. ()

051. ACCOUNTING AND AUDITING PROCEDURES.

Loan recipients must maintain project accounts in accordance with generally accepted accounting principles. Projects may be audited on an annual basis according to government auditing standards issued by the U.S. Governmental Accountability Office. ()

052. -- 059. (RESERVED)

060. DISBURSEMENTS.

01. Loan Disbursements. Requests to the Department for actual disbursement of loan proceeds will be made by the loan recipient on forms provided by the Department. ()

02. Loan Increases. An increase in the loan amount as a result of an increase in eligible project costs will be considered, provided funds are available. Documentation supporting the need for an increase must be submitted to the Department for approval prior to incurring any costs above the eligible cost ceiling. ()

03. Loan Decreases. If the actual eligible cost is determined by the Department to be lower than the estimated eligible cost the loan amount will be reduced proportionately. ()

04. Project Review to Determine Final Eligible Costs. A project review by the Department or a Department designee will determine the final eligible costs. ()

05. Final Disbursement. The final loan disbursement consisting of five percent (5%) of the total loan amount shall not be made until final inspection, final review, and a final loan repayment schedule have been completed. ()

061. LOAN CONSOLIDATION.

If two (2) or more loans are consolidated into one (1) loan, the interest rate for the consolidated loan will be at the same rate as the loan being consolidated with the lowest interest rate. ()

062. -- 079. (RESERVED)

080. SUSPENSION OR TERMINATION OF LOAN CONTRACTS.

01. Causes. The Director may suspend or terminate any loan contract prior to final disbursement for failure by the loan recipient or its agents, including engineering firm(s), contractor(s) or subcontractor(s) to perform. A loan contract may be suspended or terminated for good cause including, but not limited to, the following: ()

a. Commission of fraud, embezzlement, theft, forgery, bribery, misrepresentation, conversion, malpractice, misconduct, malfeasance, misfeasance, falsification or unlawful destruction of records, or receipt of stolen property, or any form of tortious conduct; or ()

b. Commission of any crime for which the maximum sentence includes the possibility of one (1) or more years' imprisonment or any crime involving or affecting the project; or ()

c. Violation(s) of any term of the loan contract; or ()

d. Any willful or serious failure to perform within the scope of the project, plan of operation and project schedule, terms of engineering subagreements, or contracts for construction; or ()

e. Debarment of a contractor or subcontractor for good cause by any federal or state agency from working on public work projects funded by that agency. ()

02. Notice. The Director will notify the loan recipient in writing and by certified mail of the intent to suspend or terminate the loan contract. The notice of intent shall state: ()

a. Specific acts or omissions which form the basis for suspension or termination; and ()

b. That the loan recipient may be entitled to appeal the suspension or termination pursuant to IDAPA 58.01.23, "Rules of Administrative Procedure Before the Board of Environmental Quality." ()

03. Determination. A determination will be made by the Board pursuant to IDAPA 58.01.23, "Rules of Administrative Procedure Before the Board of Environmental Quality." ()

04. Reinstatement of Suspended Loan. Upon written request by the loan recipient with evidence that the causes(s) for suspension no longer exists, the Director may, if funds are available reinstate the loan contract. If a suspended loan contract is not reinstated, the loan will be amortized and a repayment schedule prepared in accordance with provisions of the loan contract. ()

05. Reinstatement of Terminated Loan. No terminated loan shall be reinstated. Terminated loans will be amortized and a repayment schedule prepared in accordance with provisions of the loan contract. ()

081. -- 994. (RESERVED)

995. WAIVER OF REQUIREMENTS AND AMENDMENT OF PRIORITY LIST.

The Director may amend the Priority List and grant a waiver from the requirements of these rules on a case-by-case basis upon full demonstration by the loan recipient requesting the waiver that the following conditions exist. See also Section 020 of these rules. ()

01. Health Hazard. A significant public health hazard exists; ()

02. Water Contamination. A significant water contamination problem exists; ()

03. Pollution. A significant point source of pollution exists causing a violation of Idaho Department of Environmental Quality Rules, IDAPA 58.01.02, "Water Quality Standards"; or ()

04. Affordability Criteria Exceeded. The project will exceed affordability criteria adopted by the Department in the event the waiver is not granted. ()

996. -- 999. (RESERVED)

58.01.13 – RULES FOR ORE PROCESSING BY CYANIDATION

000. LEGAL AUTHORITY.

Title 39, Chapter 1, Idaho Code, grants the authority to the Board of Environmental Quality to adopt rules, regulations and standards to protect the environment and the health of the State; grants authority to the Director to issue permits as prescribed by law and by the rules of the Board; and requires Department of Environmental Quality review and approval of plans and specifications for all new facilities, or for modifications or expansions to existing facilities, that process ore by cyanidation; and authorizes the Director to require reasonable fees for processing permit applications and for services rendered by the Department. ()

001. TITLE, SCOPE AND INTENT.

01. Title. These rules are titled IDAPA 58.01.13, “Rules for Ore Processing by Cyanidation.” ()

02. Scope and Intent.

a. These rules establish the procedures and requirements for the issuance and maintenance of a permit to construct, operate and close that portion of a cyanidation facility that is intended to contain, treat or dispose of process water or process-contaminated water containing cyanide. The provisions of these rules also establish requirements for water quality that address performance, construction, operation and closure of that portion of any cyanidation facility that is intended to contain, treat, or dispose of process water. These rules are intended to ensure that process water and process-contaminated water generated in ore processing operations that utilize cyanide as a primary leaching agent and pollutants associated with the cyanidation process are safely contained, controlled, and treated so that they do not interfere with the beneficial uses of waters and do not endanger public safety or the environment. ()

b. Compliance with a permit issued under these rules does not release the permittee from liability for any unauthorized discharge to or any unauthorized degradation of waters caused by the facility. ()

003. ADMINISTRATIVE PROVISIONS.

Persons may be entitled to appeal agency actions authorized under these rules pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure Before the Board of Environmental Quality.” ()

006. CONFIDENTIALITY OF RECORDS.

Information obtained by the Department under these rules is subject to public disclosure pursuant to the provisions of Title 74, Chapter 1, Idaho Code, and IDAPA 58.01.21, “Rules Governing the Protection and Disclosure of Records in the Possession of the Idaho Department of Environmental Quality.” ()

007. DEFINITIONS.

The terms “cyanidation,” “cyanidation facility,” “Department,” “Director,” “State,” and “Waters” have the meaning provided for that term in Section 39-103, Idaho Code. The term “ground water” has the meaning provided in Section 39-121, Idaho Code. ()

01. Beneficial Use. As defined in IDAPA 58.01.02, “Water Quality Standards,” Section 010, as amended. ()

02. Best Management Practices (BMPs). As defined in IDAPA 58.01.02, “Water Quality Standards,” Section 010, as amended. ()

03. Degradation. When referring to surface water, “degradation” has the meaning provided in IDAPA 58.01.02, “Water Quality Standards,” Section 010. When referring to ground water, “degradation” has the meaning provided in IDAPA 58.01.11, “Ground Water Quality Rule,” Section 007. ()

04. Discharge. When used without qualification, any spilling, leaking, emitting, escaping, leaching, or disposing of a pollutant into waters. ()

05. Idaho Pollutant Discharge Elimination System (IPDES) Permit. A permit issued by the Department for the purpose of regulating discharges into surface waters. ()

06. Land Application. A process or activity involving application of liquids or slurries potentially containing cyanide from the cyanidation facility to the land surface for the purpose of treatment, neutralization, disposal, or ground water recharge. ()

- 07. Liner.** A continuous layer of natural or man-made materials beneath and, if applicable, on the sides of ponds, tailings impoundments, or leach pads that restricts the downward and lateral movement of liquids. ()
- 08. Material Modification or Material Expansion.** ()
- a.** Any change to a permitted cyanidation facility, except as provided in Subsection 007.08.b., that the Department determines will: ()
- i.** Cause or increase the potential to cause degradation of waters, such as a new cyanidation process or cyanidation facility component; ()
- ii.** Change the capacity, location, or process of an existing cyanidation facility component; or ()
- iii.** Change the site condition in a manner that is not adequately described in the original permit application. ()
- b.** Reclamation and closure related activities at a cyanidation facility with an existing permit that did not actively add cyanide after January 1, 2005 is not material modification or material expansion of the cyanidation facility. ()
- 09. Material Stabilization.** Managing or treating spent ore, tailings or other solids and/or sludges resulting from the cyanidation process to minimize water or all other applied solutions from migrating through the material and transporting pollutants associated with the cyanidation facility to ensure that all discharges comply with all applicable standards and criteria. ()
- 10. Neutralization or Neutralized.** Treatment of process water such that discharge or final disposal of the process water does not, or will not, violate any applicable standards and criteria. ()
- 11. Outstanding Resource Water (ORW).** A high quality water, such as water of national and state parks and wildlife refuges and water of exceptional recreational or ecological significance, which has been designated by the legislature and subsequently listed in IDAPA 58.01.02, "Water Quality Standards." ORW constitutes an outstanding national or state resource that requires protection from point and nonpoint source activities that may lower water quality. ()
- 12. Permanent Closure.** Those activities that result in neutralization, material stabilization and decontamination of cyanidation facilities and the facilities' final reclamation. ()
- 13. Permanent Closure Plan.** A description of the procedures, methods, and schedule that will be implemented to treat and dispose of cyanide-containing materials including spent ore, tailings, and process water and in controlling and monitoring discharges and potential discharges for a reasonable period of time based on site-specific conditions in manner that meets the intent and purpose of Section 39-118A, Idaho Code; Chapter 15, Title 47, Idaho Code; and all applicable rules. ()
- 14. Permit.** When used without qualification, any written authorization by the Director, issued pursuant to the application, public participation and appeal procedures in these rules, governing location, operation and maintenance, monitoring, seasonal and permanent closure, discharge response, and design and construction of a new cyanidation facility or a material expansion or material modification to a cyanidation facility. ()
- 15. Permittee.** The person in whose name a permit is issued and who is to be the principal party responsible for compliance with these rules and the conditions of a permit. ()
- 16. Person.** An individual, corporation, partnership, association, state, municipality, commission, federal agency, special district or interstate body. ()
- 17. Pollutant.** Chemicals, chemical waste, process water, biological materials, radioactive materials, or other materials that, when discharged, cause or contribute adverse effects to any beneficial use, or for any other reason, may impact waters. ()

18. Pond. A process component that stores, confines, or otherwise significantly impedes the horizontal and downward movement of process water. This term does not include tailings impoundments or non-earththen containers such as vats and tanks. ()

19. Post-Closure. The period of time after completion of permanent closure when the permittee is monitoring the effectiveness of the closure activities. Post-closure lasts a minimum of twelve (12) months but may extend until the cyanidation facility is shown to be in compliance with the stated permanent closure objectives and requirements of Chapter 15, Title 47, Idaho Code, and all applicable rules. ()

20. Process Water. Any liquid intentionally or unintentionally introduced into any portion of the cyanidation process. Such liquid may contain cyanide or other minerals, meteoric water, ground or surface water, elements and compounds added to the process solutions for leaching or the general beneficiation of ore, or hazardous materials that result from the combination of these materials. ()

21. Seasonal Closure. Annual cessation of operations that is due to weather. ()

22. Sensitive Resource Aquifer. Any aquifer or portion of an aquifer listed in IDAPA 58.01.11, Ground Water Quality Rule, Subsection 300.01. ()

23. Tailings Impoundment. A process component that is the final depository for processed ore from the mining, milling, or chemical extraction process. ()

24. Temporary Closure. Any cessation of operations exceeding thirty (30) days, other than seasonal or permanent. ()

25. Treatment or Treated. Any method, technique or process, including neutralization, that changes the physical, chemical, or biological character or composition of a waste for the purpose of disposal, or the end result of such action. ()

26. Water Balance. An inventory and accounting process, capable of being reconciled, that integrates all potential sources of water that are entrained in the cyanidation facility or may enter into or exit from the cyanidation facility. The inventory must include the water holding capacity of specific structures within the facility that contain process water. The water balance is used to ensure that all process water and other pollutants can be contained as engineered and designed within a factor of safety as determined in the permanent closure plan. ()

27. Water Management Plan. A document that describes the results of the water balance and the methods that will be used to ensure that pollutants are not discharged from a cyanidation facility into waters unless permitted or otherwise approved by the Department. ()

28. Weak Acid Dissociable (WAD) Cyanide. The cyanide concentration as determined by Method C, Weak Acid Dissociable Cyanide, D2036 of American Society of Testing Materials Book of Standards, "Standard Methods for the Examination of Water and Wastewater," Method 4500-CN- I, or other methods accepted by the scientific community and deemed appropriate by the Department. ()

008. -- 009. (RESERVED)

010. APPLICABILITY TO FACILITIES WITH EXISTING PERMITS.

A cyanidation facility with an existing permit approved by the Department prior to July 1, 2005 is subject to the applicable laws and rules for ore processing by cyanidation in effect on June 30, 2005. Material modifications or material expansions of such facilities are subject to Section 39-118A, Idaho Code. ()

011. -- 049. (RESERVED)

050. PRE-APPLICATION PROCESS AND PRELIMINARY DESIGN.

01. Pre-application Conference. Any person who intends to apply for a permit or proposes to

construct or operate a facility that is intended to contain, treat, or dispose of process water and process-contaminated water generated in ore processing operations that utilize cyanide as a primary leaching agent should contact the Department during the initial stages of site characterization to schedule a pre-application conference. Prospective applicants are encouraged to begin meeting with agents of the Department at least one (1) year in advance of preliminary design submittal to discuss, at a minimum, the following. ()

a. Environmental baseline data requirements; waste characterization requirements; siting requirements; operation and maintenance plans; emergency and spill response plans; quality assurance/quality control plans; required contents for permit applications; agency cyanidation facility visits. ()

b. The proposed water quality monitoring and reporting required in Subsection 200.11 and the monitoring well siting and construction plans required in Subsection 200.12. The applicant is encouraged to submit a report describing the purpose, objectives, location and proposed construction of monitoring wells to the Department for review and comment during the initial stages of site characterization. ()

c. The preliminary design report and alternative design proposals required prior to application submittal under Subsection 050.02. ()

d. The permitting process, application procedures, public review and comment periods, and permit schedule. ()

e. The timing of additional pre-application meetings. The pre-application conference may trigger a period of collaborative effort between the applicant, the Department, and the Idaho Department of Lands to develop an application that complies with rule requirements and ensures the facility will not interfere with the beneficial uses of waters and will not endanger public safety or the environment. ()

f. The cost recovery agreement required under Subsection 100.04. ()

02. Information Required for Preliminary Design Report. Submittal of a preliminary design report is mandatory. Upon submittal, the preliminary design report must include sufficient detail to determine the following: ()

a. The general framework and design criteria for the project; ()

b. How the project will address each applicable requirement in Subsection 100.03 and Sections 200 through 205, or why a specific requirement in Subsection 100.03 and Sections 200 through 205 is not applicable; ()

c. How the design criteria were identified, or the approach the applicant will use to determine design criteria for which insufficient data is available at the time of the preliminary design; ()

d. How the requirements of these rules will be met in the final permit application; and ()

e. How design, construction, operation and closure will ensure the facility will not interfere with the beneficial uses of waters and will not endanger public safety or the environment. ()

03. Notice of Preliminary Design Approval or Disapproval. Unless otherwise provided in this Subsection 050.03, the Director will notify the applicant in writing of the decision to approve or disapprove a preliminary design report within thirty (30) days after the Department receives all information required by Subsection 050.02. For alternative design proposals submitted under Section 205, the Director will notify the applicant in writing of the decision for alternative design approval or disapproval within ninety (90) days after the Department receives all information required by Section 205. The time required to review and, if appropriate, approve the preliminary design report is separate from and not included as part of the one hundred eighty (180) day period for issuing notice of rejection or notice of approval of the permit under Section 39-118A(2)(b), Idaho Code. Approval of the preliminary design report does not authorize the construction, modification, or operation of the cyanidation facility. ()

051. -- 099. (RESERVED)

100. PERMIT AND PERMIT APPLICATION.

01. Permit Required. No person may construct a new cyanidation facility prior to obtaining a permit from the Director. No person may materially expand or materially modify a cyanidation facility prior to obtaining a modified permit for such expansion or modification pursuant to Section 750. ()

02. Permit Application. The owner or proposed operator of a cyanidation facility or the owner's or operator's authorized representative must: ()

a. Make application to the Director in writing and in a manner or form prescribed herein; and ()

b. Provide five (5) paper copies of the application to the Director, unless otherwise agreed to by the Department and the applicant. ()

03. Contents of Application. A permit application and its contents will be used to determine if an applicant can locate, construct, operate, maintain, close and monitor the proposed cyanidation facility in conformance with these and other applicable rules including, but not limited to, IDAPA 58.01.02, "Water Quality Standards"; IDAPA 58.01.08, "Idaho Rules for Public Drinking Water Systems"; IDAPA 58.01.05, "Rules and Standards for Hazardous Waste"; IDAPA 58.01.06, "Solid Waste Management Rules"; IDAPA 58.01.11, "Ground Water Quality Rule"; and IDAPA 58.01.25, "Rules Regulating the Idaho Pollutant Discharge Elimination System Program." The application must include all of the following information in sufficient detail to allow the Director to make necessary application review decisions concerning compliance with Sections 200 through 205 as applicable and protection of human health and the environment: ()

a. Name, location, and mailing address of the cyanidation facility. ()

b. Name, mailing address, and phone number of the applicant, and a registered agent. ()

c. Land ownership status of the cyanidation facility (federal, state, private or public). ()

d. Name, mailing address, and phone number of the applicant's construction and operations manager. ()

e. The legal structure (corporation, partnership, etc.) and residence of the applicant. ()

f. The legal description, to the quarter-quarter section, of the location of the proposed cyanidation facility. ()

g. Evidence the applicant is authorized by the Secretary of State to conduct business in the State of Idaho. ()

h. A general description of the operational plans for the cyanidation facility from construction through permanent closure. This description must include any proposed phases for construction, operations, and permanent closure. ()

i. The design maximum daily throughput of ore through the cyanidation facility and the total projected volume of material to be processed during the life of the operation. ()

j. Cyanidation facility layouts including water management systems designed to segregate storm water from process water. ()

k. A geotechnical evaluation of all process water and process chemical containment systems within the proposed cyanidation facility. ()

l. A preconstruction topographic site map or aerial photos extending at least one (1) mile beyond the outer limits of the cyanidation facility, identifying and showing the location and extent of the following features: ()

- i. All wells, perennial and intermittent springs, adit discharges, wetlands, surface waters and irrigation ditches that may be affected by the cyanidation facility; ()
- ii. All process water supply source(s); ()
- iii. All public and private drinking water supply source(s) within at least one (1) mile of the cyanidation facility; ()
- iv. Identified floodplain areas (shown on USGS sectional Quadrangle maps); ()
- v. All service roads and public roads; ()
- vi. All buildings and structures within a half (1/2) mile of the cyanidation facility; ()
- vii. All outstanding resource waters and sensitive resource aquifers within one (1) mile of the cyanidation facility; and ()
- viii. All Clean Water Act Section 303(d) listed streams, and their listed impairments, within ten (10) miles of the site boundary that may be affected by the cyanidation facility. ()
- m.** To the extent such information is available, a description and location of underground mine workings and adits and a description of the structural geology that may influence ground water flow and direction. ()
- n.** A description of the proposed land application site. The description must include a potentiometric map, surface and subsurface soil characteristics, geology, hydrogeology and ground water quality. The description of these characteristics must be sufficient to determine anticipated impacts to the affected soils, associated vadose zone as well as anticipated changes in geochemistry that may affect surface and ground water quality. ()
- o.** Siting diagram for land application sites, monitoring wells, lysimeters, surface or ground water discharge sites, or surface water monitoring locations. ()
- p.** A description of measures to protect wildlife that may be affected by the facility. ()
- q.** Proposed post-construction topographic maps. ()
- r.** Engineering plans and specifications for all portions of the cyanidation facility must be submitted to the Department for review and approval. Preliminary designs for future phases of the cyanidation facility may be submitted as part of the permit application, provided that, pursuant to Subsection 500.02, the Department review and approval of final plans and specifications is required before construction of those phases may begin. All cyanidation facility engineering plans and specifications must bear the imprint of an Idaho licensed professional engineer that is both signed and dated by the engineer. These plans and specifications must, at a minimum, include all of the following information applicable to the proposed facility. ()
 - i. Designs meeting applicable criteria in Sections 200 through 204. ()
 - ii. Any alternative design approved by the Department under Section 205. ()
 - iii. The water balance, ore flow and processing calculations demonstrating the logic behind sizing of facilities. ()
 - iv. The general ore processing overview and analyses of chemical compatibility of containment materials with process chemicals and wastes, including a chemical mass balance at inputs and outputs from the cyanidation facility. ()
 - v. Geotechnical data and analyses demonstrating the logic for plans and specifications of foundation

- materials and placement. ()
- vi. Requirements for site preparation. ()
 - vii. Pumping and dewatering requirements. ()
 - viii. Procedures for materials selection and placement for backfilling foundation areas. ()
 - ix. Criteria for caps and covers used as source control measures. ()
 - x. Criteria for ensuring stability of embankments for pads, ponds and tailings impoundments. ()
 - xi. Procedures to classify and modify, if necessary, excavated fill, bedding and cover materials for buildings, pads, ponds, and tailings impoundments. ()
 - xii. Plumbing and conveyance schematics and component specifications. ()
 - xiii. Plan views and cross-section drawings of leach pad, permanent heaps, vats, process water storage ponds, tailings impoundments and spent ore disposal areas. ()
 - xiv. Leak detection and collection system plans and specifications including, but not limited to, schematics and narratives describing liner and geotextile material specifications, sumping capacity and layout, location of monitoring port(s), monitoring port components, construction operation and maintenance procedures for monitoring ports and pumping systems, including backup system, triggers for containment repairs, replacement or other contingency mitigation, frequency of monitoring, and monitoring parameters. ()
 - xv. Provisions to protect containment systems from heavy equipment, fires, earthquakes and other natural phenomena. ()
 - xvi. Quality assurance/quality control procedures. ()
 - xvii. The identity and qualifications of the person(s) directly responsible for supervising construction and quality assurance/quality control. ()
 - s. Operation and maintenance plans that include all of the following. ()
 - i. Maintenance plans, including routine service procedures for containment systems, process chemical storage, and disposal of contaminated water or soils, including petroleum-contaminated soils. ()
 - ii. A water management plan that provides for handling and containment of process water including the methods to manage and/or treat all process water and pollutants, run-off or run-on water, emergency releases, and excess water due to flood, rain, snowmelt, or other similar events. The plan must include the basis for the designed containment volumes and estimations of the need for and operation of a land application site, injection wells, infiltration galleries or leach fields, or the need for an IPDES permit. The permittee will update the plan on a regular basis to reflect the reconciliation of the water balance changes in the project through construction, operation, maintenance, and permanent closure, including modifications to the cyanidation facility. ()
 - iii. A proposed water quality monitoring plan. ()
 - iv. An emergency and spill response plan that describes procedures and methods to be implemented for the abatement and clean up of any pollutant that may be discharged from the cyanidation facility during use, handling or disposal of processing chemicals, petrochemicals and/or fuels, and any other deleterious materials. ()
 - v. A seasonal/temporary closure plan, if applicable, that describes the procedures, methods, and schedule to be implemented for the treatment and disposal of process water and pollutants, the control of drainage

from the cyanidation facility during the period of closure, the control of drainage from the surrounding area, and the secure storage of process chemicals. ()

t. The permanent closure plan must be the same as the plan submitted to the Idaho Department of Lands pursuant to the Idaho Mine Land Reclamation Act, Chapter 15, Title 47, Idaho Code, and the rules promulgated thereunder. ()

u. Characterization of pollutants contained in or released from the cyanidation facility, including the potential for the pollutants to cause degradation of waters. ()

04. Cost Recovery Agreement. Prior to submittal of the preliminary design report, an applicant must enter into an agreement with the Department for actual costs incurred to review the preliminary design report, process the permit application or any permit modification requests, issue a final permit or permit modification, and review final facility designs prior to construction if such designs were not included in the permit application. The cost recovery agreement may provide for actual costs incurred by the Department for any other service rendered pursuant to these rules or a permit so long as agreed to in advance by the applicant. ()

101. -- 199. (RESERVED)

200. REQUIREMENTS FOR WATER QUALITY PROTECTION.

The following design and performance standards are intended as the minimum criteria for protection of public health and waters. These standards apply to all facilities unless the Department determines that other site-specific criteria, including an alternative design approved under Section 205, are appropriate to protect water quality and the public health. ()

01. Professional Engineer. Plans and specifications for construction, alteration or expansion of any cyanidation facility must be prepared by or under the supervision of an Idaho licensed professional engineer and bear the imprint of the engineer's seal. Construction must be observed by an Idaho licensed professional engineer or a person under the supervision of an Idaho licensed professional engineer. ()

02. Plans and Specifications. Final plans and specifications for the construction of a cyanidation facility must be submitted to and approved by the Department before construction may begin. All construction must be in compliance with the plans and specifications approved by the Department. Within thirty (30) days of the completion of such construction, modification or expansion, complete and accurate plans and specifications depicting that actual construction, modification or expansion does not deviate from the original approved plans and specifications must be submitted to the Department. ()

03. Manufacturer's Specifications. Manufacturer's specifications for materials and equipment necessary to meet the requirements of Subsection 100.03.r. and Sections 200 through 205 for containment of process water must be submitted to the Department with the plans and specifications required in Subsection 200.02 before construction may begin. ()

04. Siting and Preparation. All cyanidation facilities including, but not limited to, the process building, laboratories, process chemical storage and containment facilities, plumbing fixtures that support process water, untreated or treated process water ponds, tailings impoundments, ore stock piles, and spent ore disposal areas must be appropriately sited and prepared for construction. Siting criteria must ensure that, at a minimum, the facilities are structurally sound and that containment systems can be adequately protected against factors such as wild fires, floods, land slides, storm water run-on, erosion, migrating stream channels, high ground water table, equipment operation, subsidence of underground workings, public access and public activities. All sites must be properly prepared prior to construction of foundations and facilities. Vegetation, roots, brush, large woody debris and other deleterious materials, top soil, historic foundations and plumbing, or other materials that may adversely affect appropriate construction and long term stability, must be removed from the footprint of the cyanidation facility unless approved by the Department. ()

05. Process Water Storage Sizing Criteria. All aspects of the cyanidation facility that entrain, utilize, treat, discharge, pump, convey, or otherwise contain process water, treated process water, or run-off water from any portion of the cyanidation facility must be included in the water balance. Each pond, tailings impoundment, and ditch

containing process water must be designed to maintain a minimum two (2) foot freeboard during storage or conveyance of the design climatic events plus maximum expected normal operating levels. Leach pad design must provide containment of the maximum expected operating flows plus storm flows from the design climatic event. At a minimum, a cyanidation facility must be designed to contain the maximum expected normal operating water balance and the volume of run-on and run-off water associated with a climatic event that has a one percent (1%) annual exceedance probability. Snowmelt events will be considered in determining the maximum flow volume during the design climatic event. Contingency plans for managing excesses of all water included as a part of the water balance must be described in the water management strategy. Each structure that impounds process water or process contaminated water must include a means of passing excess water unless otherwise approved by the Department. ()

06. Minimum Plans and Specifications. Unless the Department approves an alternative design under Section 205, the plans and specifications for any portion of a cyanidation facility that will contain process water must satisfy the applicable general design criteria in Subsection 200.06 and the design criteria in Sections 201 through 204 for the type of facility receiving process water. These provisions establish minimum pollutant control technologies and define the site and operating conditions that must be evaluated. ()

a. Cyanidation facility design must: ()

i. Minimize releases of pollutants into ground water or subsurface migration pathways so that any release will not cause unauthorized degradation of waters. ()

ii. Preclude any differential movement or shifting of the subgrade, soil layer, liner or contained material that endangers containment integrity as a result of the proposed range of operating conditions for each component and the history of seismic events at the site. ()

iii. Include additional containment of process water, as requested by the Department, in areas where ground water is considered to be near the surface. Ground water is considered to be near the surface if: ()

(1). The depth from the surface to ground water is less than one hundred (100) feet and the top one hundred (100) feet of the existing formation has a hydraulic conductivity greater than 10^{-5} cm/sec; ()

(2). Open fractured or faulted geologic conditions exist in the bedrock from the surface to the ground water; or ()

(3). There is an inability to document that all borings beneath the cyanidation facility have been adequately abandoned. ()

iv. Not locate new process component containing process water within one thousand (1,000) feet of any dwelling that is occupied at least part of the year and not owned by the permittee. This does not apply to modifications at a facility that predates such a dwelling. ()

v. Include measures for preventing wildlife contact with process water having a WAD cyanide concentration in liquid fraction exceeding fifty (50) mg/L. The Department may require additional measures if wildlife mortality is observed. ()

vi. Implement measures to protect birds, other wildlife and livestock from adverse effects of cyanide process water and other pollutants. ()

vii. Include a quality assurance/quality control plan for the construction of containment systems that provides a process for documenting owner acceptance of all underlying components of the containment system prior to construction of the overlying components. ()

b. Liner systems must: ()

i. Have a structurally stable subgrade for the overlying components and contained material. The subgrade should be constructed to resist consolidation, excessive differential settlement that compromises liner

performance, and uplift resulting from pressures inside or outside the containment unit to prevent distortion of overlying components. ()

ii. Have a smooth rolled and compacted soil layer, or equivalent layer approved by the Department, in intimate contact with the overlying geomembrane liner with the following characteristics: ()

(1). A minimum thickness of twenty-four (24) inches compacted to ninety-five percent (95%) of maximum dry density according to Standard Proctor Test ASTM D698 or Modified Proctor Test ASTM D1557; ()

(2.) Soil placed in a minimum of four (4) lifts that each have a compacted thickness of six (6) inches and a hydraulic conductivity less than or equal to 10^{-6} cm/sec; ()

(3). An uppermost lift of soil that does not contain particles in excess of point seven five (0.75) inches (nineteen (19) mm) in largest dimension unless larger particles are consistent with the manufacturer's specifications for the overlying liner and approved by the Department; ()

(4). No putrescible, frozen or other deleterious materials. ()

(5). No angular, sharp material regardless of diameter; and ()

(6). Soil placed within two percent (2%) of optimum moisture content to achieve the specified compaction and hydraulic conductivity. ()

iii. Include the following if an equivalent layer replacing the soil layer described in Subsection 200.06.b.ii is proposed: ()

(1). A layer that is not a geomembrane and has a liquid flow rate no greater than that of twenty-four (24) inches of compact soil with a hydraulic conductivity less than or equal to 10^{-6} cm/sec; ()

(2). Materials with appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste, process water, or process contaminated water to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation; ()

(3). Materials that provide appropriate shear resistance of the upper and lower component interface to prevent sliding of the upper component including on slopes; ()

(4). Certification from an Idaho licensed professional engineer that the liquid flow rate per unit area through the equivalent layer is no greater than the liquid flow rate through two (2) feet of compacted soil with a hydraulic conductivity less than or equal to 10^{-6} cm/sec, considering the maximum hydraulic head anticipated on the liner system and the thickness of the equivalent layer replacing the two (2) feet of compacted soil; and ()

(5). Plans and specifications for an equivalent layer that substantially reflect the manufacturer's specifications and standards for construction, operation and maintenance unless otherwise approved by the Department. ()

iv. Include geomembrane liners consisting of high density polyethylene, linear low-density polyethylene, or equivalent, rated as having a resistance to the passage of process water equal to or less than a hydraulic conductivity of 10^{-11} cm/sec. Each geomembrane liner will be constructed of materials with appropriate chemical properties and sufficient strength and thickness to prevent failure due to pressure gradients (including static head and external hydrogeologic forces), physical contact with the waste or leachate to which they are exposed, climatic conditions, the stress of installation, and the stress of daily operation and permanent closure. ()

v. Be constructed according to manufacturer's standards, or Department-approved design standards, and protect against damage from cracking, sun exposure, ice, frost penetration or heaving, wildlife, wildfires, and

damage that may be caused by personnel or equipment operating in or around these facilities. ()

vi. Have an appropriate coefficient of friction against sliding plus a factor of safety for each interface constructed on a slope. ()

vii. Have minimum factors of safety, and the logic behind their selection, for the stability of the earthworks and the lining systems. ()

viii. Include redundant systems for failures in primary power or pumping systems. ()

ix. Have liner material that meets the manufacturer's quality assurance/quality control performance specifications. ()

07. Process Buildings, Process Chemical Storage Containment Areas and General Facility Criteria. Storage, handling and use of all process chemicals, process wastes, process water and pollutants associated with the cyanidation facility must be conducted within a clean, safe and secure work space to prevent unauthorized discharges to soils, ground water or surface water. The plans and specifications must contain sufficient detail, including pump capacity and plumbing for evacuation of collection sumps, triggering systems for sump evacuation, and monitoring and reporting requirements and, where appropriate, provide for: ()

a. Structural integrity of the foundation, walls and roof for process and process chemical storage buildings; ()

b. Restriction of public access; ()

c. Protection of wildlife; ()

d. Internal sumps and spill cleanup plans; ()

e. Grouted and sealed concrete stemmed walls and floors in the process buildings and process chemical storage and containment facilities; ()

f. Vapor barriers and frost protection; ()

g. Segregation of process chemicals according to compatibility; ()

h. Communication systems; ()

i. Fire suppression systems, internal and external; and ()

j. Quality assurance/quality control for construction activities and construction materials. ()

08. Cap and Cover Criteria. Caps and covers used as source control measures for facilities must be designed and constructed to minimize the interaction of meteoric waters, surface waters, and ground waters with wastes containing pollutants that are likely to be mobilized and discharged to waters. Caps and covers designed for permanent closure must demonstrate permanence applicable to the permittee's designed and approved permanent closure plan. ()

09. Plumbing and Conveyance Criteria. Plumbing and conveyance systems must: ()

a. Be structurally sound and chemically compatible with the materials being conveyed; ()

b. Provide adequate primary and secondary containment; and ()

c. Be protected against heat, cold, mechanical failures, impacts, fires, and other factors that may cause breakage and result in unauthorized discharges. ()

10. Operation and Maintenance Plans. Operation and maintenance plans must be submitted to the Department for review and approval. Operation and maintenance plans must include, but are not limited to: ()

a. An overall plan that includes techniques for evaluating the integrity and performance of all containment systems; ()

b. Schedule for inspections of all containment systems; ()

c. Schedule for inspections on piping and conveyance systems that carry process water; ()

d. Response plans that detail specific actions that will result in mitigation of compromised or damaged containment systems; and ()

e. Response plans that detail specific thresholds identified under Subsection 200.11, the locations and frequency at which the thresholds will be monitored, and actions that will result in mitigation of an exceedance of any threshold. ()

11. Water Quality Monitoring and Reporting. The water quality monitoring plan submitted with the application must be reviewed and, if appropriate, approved by the Department. The approved water quality monitoring plan must: ()

a. Provide for physical, chemical and biological monitoring, including measurements of surface water flow, wildlife and bird mortality, and aquatic indicator species in potentially affected surface and ground water, as appropriate; ()

b. Provide for sampling locations and frequency; ()

c. Provide an assessment of the existing surface and ground water conditions prior to construction of the proposed cyanidation facility; ()

d. Be site specific and dependent on location, design and operation of the cyanidation facilities included in the overall operating plan; ()

e. Specify compliance points and associated water quality compliance criteria; ()

f. Specify monitoring points and threshold concentrations that provide for early detection of discharges of pollutants; ()

g. Provide analytical methods and method detection limits for chemical analysis used in the determination of water quality; ()

h. Provide a quality assurance quality control plan for data collection and analysis; ()

i. Provide for appropriate and timely analytical data analyses including evaluations of water quality and quantity trends; ()

j. Provide an annual environmental monitoring and data analysis report of water quality and quantity trends; ()

k. Provide for the reporting and re-sampling of monitoring locations where detectable and statistically significant changes in water quality are found. The permittee must propose a statistical method to determine the significance of the changes in water quality; and ()

l. Provide for anticipated changes or modifications to monitoring plans, which may be the result of a phased approach to cyanidation facility construction, operations and permanent closure. ()

12. Monitoring Wells Siting and Construction Plans. The applicant is encouraged to submit a report

describing the purpose, objectives, location and proposed construction of monitoring wells to the Department for review and comment during the initial stages of site characterization. A monitoring well siting and construction plan must be provided upon submittal of the preliminary design report under Subsection 050.02. ()

a. Monitoring well siting and construction plans must provide for the following. ()

i. A quality assurance/quality control plan for well construction. ()

ii. A minimum of three (3) monitoring wells with one (1) located up gradient and two (2) located down gradient of primary components of the cyanidation facility to determine ground water flow direction. ()

b. Siting and planning for additional wells or replacement wells may be required in the permit application and final permit. Specifically, additional wells may be required for: ()

i. Large areas with multiple potential sources for pollutants; ()

ii. Areas with complex geology, fractured bedrock; and ()

iii. Areas with insufficient background hydrogeology. ()

c. All monitoring well construction must also conform to the well construction rules listed in IDAPA 37.03.09, "Well Construction Standards Rules." ()

d. Record diagrams including well construction details, well elevation and a detailed geologic log must be provided to the Department for each monitoring well. ()

13. Land Application. Plans and specifications must include: ()

a. An operation and maintenance plan including: ()

i. Water balance for the land application site; ()

ii. Pretreatment requirements and procedures; ()

iii. Operating season for land application; ()

iv. Seasonal closeout procedures; ()

v. Special soils or vegetative amendments; ()

vi. Storm water run-on/run-off controls; ()

vii. Best management practices for all areas impacted by the land application system; and ()

viii. A topographic map of the land application site and adjacent affected areas, of sufficient scale to facilitate site-specific analysis of soils, vegetation, surface water and ground water; ()

b. Chemical, physical, and volumetric characteristics of the material to be land applied; ()

c. A complete description of the chemical and physical characteristics of the soils and applicable geology of the land application site; ()

d. Methods of process water treatment, distribution and disposal; ()

e. Hydraulic loading capacity of the soils; ()

f. Constituent loading capacity of the site; ()

- g.** Attenuation capacity of the vegetative covers and soils; ()
- h.** Evapotranspiration capacity of the site; ()
- i.** Testing and analytical procedures for water quality and soils samples prior to, during, and following the land application process; ()
- j.** Trend analysis of the constituent loading in the affected soils, vegetation and water quality of the affected surface or ground water systems; ()
- k.** Reporting requirements including both frequency and form; and ()
- l.** Standby power and pumps sufficient to maintain all treatment and distribution works. ()

14. Temporary or Seasonal Closure. Temporary and seasonal closure plans for the entire cyanidation facility must be submitted by an applicant to the Department for review and approval prior to issuance of a final permit. Temporary and seasonal closure plans may, subject to Department approval pursuant to Section 750, be modified to provide for changes in operating conditions of the facilities and must incorporate a water management plan for the period of inactivity as well as during shut down and reactivation. ()

a. Prior to seasonal closure, process buildings, process chemical storage, process water ponds, tailings impoundments, spent ore disposal areas and other ancillary facilities must be stabilized and/or conditioned to prevent any emergency or unauthorized discharges to surface or ground water. ()

b. Subsequent to seasonal closure, process buildings, process chemical storage, process water ponds, tailings impoundments, spent ore disposal areas and other ancillary facilities must be maintained to prevent any emergency or unauthorized discharges to surface or ground water. Cyanidation facilities must be conditioned and maintained to provide: ()

- i.** Material stabilization for all solids affected by process waters; ()
- ii.** Optimum freeboard in all ponds, as dictated by the water management plan; ()
- iii.** Fully functional power and pumping systems that are ready for use; both power and pumps are to incorporate redundant systems to allow for failure of either power or a pumping system. A failed power supply or pump is not an acceptable reason for an unauthorized discharge; ()
- iv.** Protection of all containment; and ()
- v.** Sufficient availability of qualified staff to restrict public access, fully implement the water quality monitoring plan, and initiate the emergency and spill response plan. ()

15. Employee Education Program. Operators and staff of facilities must be properly oriented and trained to operate, maintain and protect containment systems; waste disposal and discharge systems; and to implement monitoring and emergency and spill response plans. An applicant must submit an employee orientation and continuing training plan to the Department for review prior to issuance of a final permit. The plan must provide the format and contents for training, the general qualifications of the person(s) responsible for training and testing, and the person(s) or positions who must receive such training. ()

201. DESIGN CRITERIA FOR LEACH PADS AND OTHER NONIMPOUNDING SURFACES THAT CONTAIN AND PROMOTE HORIZONTAL FLOW OF PROCESS WATER.

Plans and specification for leach pads and other nonimpounding surfaces that temporarily contain, not impound, process water and promote the horizontal flow of process water must provide for all of the following. ()

01. Minimal Hydraulic Head. Process water is limited to twelve (12) inches or less hydraulic head pressure on the liner systems. ()

02. Engineered Liner System. In addition to meeting the general liner requirements in Subsection 200.06.b., the engineered liner system plans and specifications are to provide for geomembrane liners with a minimum thickness of eighty (80) milli-inches (2.0 mm) or equivalent liners approved by the Department. ()

a. If leach pads or other non-impounding surfaces are located above areas where ground water is considered near the surface pursuant to Subsection 200.06.a.iii., the Department may require a liner system with a higher level of engineered containment. ()

b. When a material or system that provides hydraulic relief is installed, beneath a single liner, including, but not limited to, sand, French drains and geotextiles, regardless of the intent of its design, it is to function as a leak detection system and include a means for recovering process water. ()

c. Depending on the methods and materials used for their construction, the Department may require all open channels that routinely transport process water to be traced by a leak detection system. ()

03. Ore Loading Procedures. Procedures for loading ore onto the leach pads that minimize tensile stresses in the containment liners that may result in failure of the liners. ()

04. Monitoring. Monitoring points that will provide for early detection of any discharge. ()

05. Process Water Containment. Where appropriate, process water containment calculations at the leach pad perimeter should include the potential for drainage constrictions, including constrictions due to talus or washouts at the ore pile toe. Ore pile setbacks from the leach pad perimeter should be calculated based on local climatic conditions, ore properties, and site specific operating conditions. Solution collection ditches in which the liner is contiguous with the leach pad may be used to satisfy perimeter containment requirements. ()

202. DESIGN CRITERIA FOR PROCESS PONDS.

01. Engineered Liner System. In addition to meeting the general liner requirements in Section 200.06.b., the engineered liner system plans and specifications must provide for all of the following. ()

a. Lower geomembrane liners with a minimum thickness of eighty (80) milli-inches (2.0 mm) or equivalent liners approved by the Department. ()

b. Leak detection and collection system that provides material between the lower geomembrane liner and the upper liner system to collect, transport and remove all process water that passes through the upper liner at such a rate as to prevent hydraulic head from developing on the lower geomembrane liner to the level at which it may be reasonably expected to result in leaks through the lower liner system. ()

c. Upper geomembrane liners with a minimum thickness of eighty (80) milli-inches (two (2.0) mm) or equivalent liners approved by the Department. ()

d. Routines and schedules for the evaluation of the efficiency and effectiveness of the removal of process water from the leak collection system. The properly working system will continually relieve head pressures on the lower geomembrane liner. ()

e. Monitoring points that will provide for early detection of any discharge. ()

f. Specific triggers for maintenance routines to address inadequate performance of liner systems. ()

g. Specific operation and maintenance procedures to address inadequate performance of containment or leak detection and collection systems. ()

02. Temporary Containment. Ponds for temporary containment of excess quantities of process water as a result of storm events may be constructed with a single liner if approved by the Department. ()

203. DESIGN CRITERIA FOR CONTAINERS THAT CONFINE PROCESS WATER.

Vats, tanks, or other containers that are partially buried and cannot be visually inspected must have a system providing secondary containment and leak detection. If visual inspection is possible and an area for secondary containment equal to one hundred ten percent (110%) of the largest container is provided, a double liner is not required. ()

204. DESIGN CRITERIA FOR TAILINGS IMPOUNDMENTS.

01. Engineered Liner System. In addition to meeting the general liner requirements in Subsection 200.06.b., the engineered liner system plans and specifications must provide for the following. ()

a. Geomembrane liners with a minimum thickness of sixty (60) milli-inches (1.5 mm) or equivalent liners approved by the Department. ()

b. A system to limit hydraulic head over the geomembrane liner that preserves the integrity and long-term performance of the liner system and includes the following: ()

i. A system to reduce excess pore pressure within the tailings; and ()

ii. A plan for managing the depth, area, and volume of process water occurring above the tailings surface and in direct contact with the liner, including thresholds and contingency measures to manage excess accumulation of process water in the facility. ()

c. Monitoring points that will provide for early detection of discharges of pollutants. ()

02. Enhanced Containment Criteria. An enhanced level of containment may be required by the Department for all of the tailings impoundment or for a portion thereof after considering the following factors: ()

a. The anticipated characteristics of the material to be deposited; ()

b. The characteristics of the soil and geology of the site; ()

c. The methods employed and degree to which the hydraulic head on the liner is minimized; ()

d. The extent of and methods used for material stabilization and recycling or neutralization of process water; ()

e. Area and volume of process water; ()

f. The depth from the surface to all ground water; ()

g. The methods employed in depositing the impounded material; and ()

h. The proximity to surface water and the ground water interactions with surface water. ()

03. Tailings Treatment. Tailings impoundments are restricted to a maximum of fifty (50) mg/L WAD cyanide concentration in the liquid fraction unless otherwise approved by the Department. ()

205. ALTERNATIVE PLANS AND SPECIFICATIONS FOR FACILITIES THAT CONTAIN PROCESS WATER.

An applicant may propose an alternative to the requirements identified in Sections 200.06, 201, 202, 203, or 204 based on site-specific conditions and best management practices to protect water quality and human health. All other requirements in Section 200 apply to alternative design proposals. ()

01. Alternative Design Proposal. The applicant must demonstrate that the alternative design will

protect water quality and human health by confirming that the alternative to the minimum design criteria is appropriate based on the WAD cyanide concentration and chemical characteristics of materials contained; the physical characteristics of the materials contained; site-specific soil, geology, hydrology, and hydrogeology characteristics; degree to which hydraulic head on the liner is minimized; area and volume of the facility; depth to ground water; methods employed in depositing the impounded material; potential for leaks and impacts to water quality; and risk to human health and the environment. The alternative design must provide an evaluation based on site-specific data, supported by best available science, and consistent with best management practices demonstrating that process water and process-contaminated water are contained and controlled or treated as necessary to protect public safety and the environment, prevent unauthorized degradation of waters, and achieve all applicable water quality and ground water quality standards. The alternative design must include all applicable elements listed below. ()

a. A hydrogeology assessment of site characteristics including depth to ground water; distance to surface water; hydrogeology and stratigraphy of the site; ground water and surface water interaction; and the quality, characteristics and existing and future beneficial uses of ground water and surface water that may be potentially affected by the facility. ()

b. An engineering assessment detailing the design of each component of the containment system, including type and thickness of each component of the liner system; types of materials to be used and methods of placement of those materials; structures, devices and techniques for controlling drainage and minimizing solution loss; and method to control internal hydraulic head.. ()

c. A water quality assessment providing an analysis of potential for the facility to cause degradation of waters including the effect of ground water and surface water interactions, the potential for process water to reach waters, and the potential impact of process water on waters. ()

02. Preliminary Design Submittal. Alternative design proposals must be provided to the Department upon submittal of the preliminary design report required in Section 050. ()

03. Department Review. In evaluating alternative design proposals, the Department will consider the WAD cyanide concentration and other materials contained in facilities receiving process water, site hydrogeology, advances in liner technology, alternative designs implemented at other facilities receiving process water, and other site-specific factors in determining if an alternative is appropriate to protect water quality and the public health. ()

04. Cost Recovery Agreement. As provided in Subsection 100.04, the applicant must enter into an agreement with the Department for actual costs incurred to process an alternative design proposal under this subsection. The Department may utilize a third-party to support Department review of the alternative design proposal. ()

206. -- 299. (RESERVED)

300. APPLICATION PROCESSING PROCEDURE.

01. Completeness Review. Within thirty (30) days of receipt of an application, the Director will issue a written notice to the applicant and the Idaho Department of Lands, indicating: ()

a. The application is complete; or ()

b. The application is incomplete, specific deficiencies, and additional required information. ()

02. Accuracy and Protectiveness Review. Within ninety (90) days of receipt of an application and upon determination by the Department that the application is complete, the Department will review the application for accuracy and protectiveness based on these and other applicable rules including, but not limited to, IDAPA 58.01.02, "Water Quality Standards," and IDAPA 58.01.11, "Ground Water Quality Rule." ()

03. Permit Application Rejection. ()

a. If the Director decides to reject an application under subsection 300.03.b., the Director will provide public notice within ninety (90) days after receipt of the application. Such notice will be in writing, explain the basis for the rejection, and constitute a notice of rejection in accordance with Section 39-118A(2)(b), Idaho Code. ()

b. A complete permit application will be rejected if: ()

i. The cyanidation facility as proposed cannot be conditioned for construction, operation, and closure so as to comply with applicable state law; or ()

ii. Any payment required by the cost recovery agreement under Subsection 100.04 is due and unpaid. ()

04. Draft Permit and Fact Sheet.

a. If the Director decides to prepare a draft permit or draft major permit modification, the draft will contain the following information: ()

i. All conditions based on Sections 200 through 204; ()

ii. All conditions for an approved alternative under Section 205; ()

iii. All conditions under Section 500; ()

iv. Any information incorporated into the draft permit by reference; and ()

v. Any other condition the Director finds appropriate to protect water quality and public health. ()

b. A fact sheet will accompany the draft permit. The fact sheet will briefly state the principal facts and the significant legal and policy questions considered in the draft permit. The fact sheet will include, when applicable: ()

i. A brief description of the proposed cyanidation facility and the operating plan described in the application or permit modification request. ()

ii. A brief summary of the basis for the conditions on the draft permit, including references to applicable statutes or regulations and appropriate supporting references to the administrative record; and. ()

iii. The name and phone number of the agency representative to contact for additional information. ()

301. -- 399. (RESERVED)

400. PUBLIC NOTICE AND COMMENT.

01. Public Notice. No public notice is required when a request for a permit modification is denied. The Director will give public notice of: ()

a. Receipt of an application for a permit; ()

b. A scheduled public meeting; ()

c. Issuance of a draft permit and fact sheet or a decision to reject an application for a permit; and ()

d. An appeal that has been filed. ()

02. Public Notice Information. A public notice issued under this section will contain at least the following information:

- a. Contact information for the Department and applicant; ()
- b. Description of public involvement procedures and how to obtain additional public information available; ()
- c. General description of the facility location; ()
- d. Comment period; and ()
- e. Public meeting location and time conducted under subsection 400.06 ()

03. Serving the Public Notice. Public notice of permit actions will be given by the following methods: ()

- a. By mail to: ()
 - i. The applicant; ()
 - ii. Persons on the public notice mailing list developed under Subsection 400.04; and ()
 - iii. Other appropriate federal, tribal, state, or local government entities. ()
- b. Publication in a daily or weekly major newspaper of general circulation in the area of the proposed cyanidation facility; and ()
- c. Any other method reasonably calculated to give actual notice of the action in question to the persons potentially affected. ()

04. Mailing List. The Department will develop a mailing list for public notices issued under this section by recording those who request in writing to be on the list, publishing notice of the opportunity to be on the mailing list on the Department's website, and periodically publishing in the local press and in regional and state-funded newsletters, environmental bulletins, state law journals or similar publications. The Department may update the mailing list from time to time by requesting written indication of continued interest from those listed and may delete from the list the name of any person who fails to respond to the Department's request. ()

05. Participation by Idaho Department of Lands. The Department will request that the Idaho Department of Lands participate in the public meeting with respect to performance criteria for permanent closure. ()

06. Public Comment Period. The Director will allow public comment on a draft permit for a period of sixty (60) days beginning on the date of the public notice for the draft permit. All written comments received during this public comment period will be considered by the Director. ()

07. Public Meeting. Within thirty (30) days after the date of the public notice for draft permit or draft major permit modification, the Department will hold a public meeting. Oral or written comments may be submitted by any person at the public meeting. The meeting will be conducted by an official designated by the Director. In order for the Department to address public comments in its Response to Public Comments pursuant to Subsection 450.02, comments must be submitted in writing during the public comment period under subsection 400.06. ()

401. -- 449. (RESERVED)

450. FINAL PERMIT DECISION.

01. Notification of the Decision. The Director will provide notice of the final permit decision to each person or entity given notice under Subsection 400.03. This notice will include reference to the procedures for administrative appeal under Section 003. For the purpose of this section, a final permit decision means a final decision to issue, deny, or modify a permit. ()

02. Response to Public Comments. The Director will prepare and make available to the public a response to relevant written comments received during the public comment period under Subsection 400.06. This response will: ()

a. Specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change; and ()

b. Briefly describe and respond to all relevant written comments on the draft permit. ()

03. Basis for Permit Denial. The Director will deny a permit if: ()

a. The application is incomplete or inaccurate; ()

b. The cyanidation facility as proposed cannot be conditioned for construction, operation, and closure so as to comply with applicable state law; or ()

c. The Idaho Department of Lands has determined that the permanent closure plan does not meet the requirements of Chapter 15, Title 47, Idaho Code, or the rules promulgated thereunder. ()

04. Immediate Effect of the Permit. A valid permit authorizes the construction and operation of a cyanidation facility in accordance with the terms of the permit. ()

451. -- 499. (RESERVED)

500. PERMIT CONDITIONS.

The following conditions apply to and must be specified in all permits: ()

01. Compliance Required. The applicant or permittee must comply with all conditions of the permit. Issuance or possession of a permit issued according to these rules does not relieve the applicant or permittee of the responsibility to comply with all other applicable local, state, and federal laws. ()

02. Construction. Construction of individual components of a cyanidation facility may commence upon approval by the Department of the final plans and specifications for that component. ()

03. Record Plans and Specifications. An Idaho licensed professional engineer must confirm in writing that all record drawings and specifications are complete and accurate. These record plans and specifications must be submitted by the permittee to the Director within thirty (30) days after the completion of the construction of each critical phase of facility development as approved by the Department. The record plans and specifications must be accompanied by a final construction report. If the construction does not deviate from the approved plans and specifications, a statement to the effect must be submitted by the engineer. The Department will review the final construction report, including record plans and specifications and results of quality control and quality assurance testing, to verify that the facility was constructed in compliance with and does not deviate from the approved plans and specifications. If the Department determines that the facility was not constructed in compliance with or deviates from the approved plans and specifications, the Department will provide the permittee written notice of necessary corrective actions within thirty (30) days of receipt of all submittals required by this subsection. In the event the Department provides such written notice, operation of the facility may not begin until the Department inspects and provides written approval of the corrective actions. Operation of the facility may begin if the Department does not deliver to the permittee such written notice within thirty (30) days of receipt of all submittals required by this subsection. ()

04. Duty to Provide Information. The permittee must furnish to the Director, within a reasonable or specified time, any information, including copies of records required by the permit or other applicable rules, that the

Director may request to determine whether cause exists for modifying or revoking the permit or to determine compliance with the permit or other applicable rules. ()

05. Notifications. After initial construction and seasonal and/or temporary closure, the permittee must, within thirty (30) days, provide written notice to the Director of the permittee's intentions to commence or restart operations. At least thirty (30) days prior to completion of operations, and/or temporary or seasonal operations, the permittee must notify the Director of the permittee's intentions to temporarily, seasonally or permanently close operations. Notification must provide sufficient time for the Director to provide pre-operational or post-operational inspections, as necessary. ()

06. Entry and Access. The permittee must allow the Director, or a designee obligated by agreement with the Director to comply with the confidentiality provisions of Section 39-111, Idaho Code, to: ()

a. Enter at reasonable times upon the premises of a permitted cyanidation facility or where records required by a permit are kept; ()

b. Have access to and copy at reasonable times any records that must be kept under the conditions of the permit; ()

c. Inspect at reasonable times any cyanidation facility, equipment, practice, or operation permitted or required by the permit; and ()

d. Sample or monitor at reasonable times, substance(s) or parameter(s) directly related to permit or regulation compliance. ()

07. Reporting. It is the permittee's responsibility to report to the Director: ()

a. Orally, as soon as possible but no later than twenty-four (24) hours from the time the permittee knows or should reasonably know of any noncompliance that may endanger the public health or the environment. ()

b. In writing, within five (5) working days from the time a permittee knows or should reasonably know of any event that may be or that may result in a violation of these rules, or IDAPA 58.01.02, "Water Quality Standards," or IDAPA 58.01.11, "Ground Water Quality Rule." This report must contain: ()

i. A description of the event and its cause; if the cause is not known, steps taken to investigate and determine the cause; ()

ii. The period of the event including, to the extent possible, the individual(s) involved in the incident(s) and the time(s) and date(s) of the incidents; ()

iii. Measures taken to mitigate or eliminate the event and protect the public health; and ()

iv. Steps taken to prevent recurrence of the event; ()

c. In writing, confirmation of any conditions that may result in violation of any permit condition; and ()

d. In writing, when the permittee knows or should reasonably know of relevant facts not submitted or incorrect information submitted in a permit application or any report or notice to the Director or the Department. Those facts or the correct information must be included as a part of this report. ()

08. Discharge Response. If an unauthorized discharge occurs the permittee must implement the Department approved emergency and spill response plan. ()

09. Temporary or Seasonal Closure Plans. Prior to temporary or seasonal closure, the permittee must submit a temporary or seasonal closure plan to the Director for approval. The plan must describe the procedures, ()

methods, and schedule to be implemented for the treatment and disposal of process water and pollutants, the control of drainage from the cyanidation facility, the control of drainage from the surrounding area, and the secure storage of chemicals during the period of closure. Within thirty (30) days of receiving the plan, the Director will approve and/or suggest modifications necessary to protect waters. The permittee must ensure that closure complies with an approved plan. The approved plan must be implemented before the permittee completes temporary or seasonal closure. Facilities may not be temporarily or seasonally closed for a period longer than two (2) years unless approved by the Director. ()

10. Begin Construction. If the permittee fails to begin construction of a cyanidation facility within one (1) year of the effective date of the permit, the permit will be deemed void. ()

11. Permanent Closure. The permanent closure plan, as approved by the Idaho Department of Lands, will be incorporated by reference into the Department-issued permit as a permit condition and will be enforceable as such. ()

501. COMPLETION OF PERMANENT CLOSURE.

01. Implementation of a Permanent Closure Plan. Unless otherwise specified in the approved permanent closure plan, the permittee must begin implementation of the approved permanent closure plan: ()

- a. Within two (2) years of the final addition of cyanide to the ore processing circuit; or ()
- b. If the product recovery phase of the cyanidation facility has been suspended for a period of more than two (2) years. ()

02. Submittal of a Permanent Closure Report. The permittee must submit a permanent closure report to the Department for review and approval. A permanent closure report must be of sufficient detail for the directors of the Department and the Idaho Department of Lands to issue a determination that permanent closure, as defined in Section 007, has been achieved. The permanent closure report must address: ()

- a. The effectiveness of material stabilization; ()
- b. The effectiveness of the water management plan and adequacy of the monitoring plan; ()
- c. The final configuration of the cyanidation facility and its operational/closure status; ()
- d. The post-closure operation, maintenance, and monitoring requirements, and the estimated reasonable cost to complete those activities; ()
- e. The operational/closure status of any land application site of the cyanidation facility; ()
- f. Source control systems that have been constructed or implemented to eliminate, mitigate, or contain short and long term discharge of pollutants from the cyanidation facility, unless otherwise permitted; ()
- g. The short and long term water quality trends in surface and ground water through the statistical analyses of the existing monitoring data collected pursuant to the ore processing by cyanidation permit; ()
- h. Ownership and responsibility for the cyanidation facility during the defined post-closure period; ()
- i. The future beneficial uses of the land, surface and ground waters in and adjacent to the closed facilities; and ()
- j. How the permanent closure of the cyanidation facility complies with the Resource Conservation and Recovery Act, Hazardous Waste Management Act, Solid Waste Management Act, and appropriate rules. ()

502. DECISION TO APPROVE OR DISAPPROVE OF A PERMANENT CLOSURE REPORT.

01. Cost Recovery. Final closure of the cyanidation facility will not be approved if any payment required by the cost recovery agreement under Subsection 100.04 is due and unpaid. ()

02. Issuance of Director's Determination. Within sixty (60) days of receipt of a permanent closure report, the Director will issue to the permittee a Director's determination of approval or disapproval of the permanent closure report. The Director's determination will be based on applicable statutes or rules administered by the Department. The Department will coordinate the evaluation of the permanent closure report with the Idaho Department of Lands. ()

03. Director's Determination to Disapprove a Permanent Closure Report. A Director's determination to disapprove a permanent closure report will specifically identify and discuss those reasons for disapproval, any administrative actions being considered by the Director, and the permittee's options and procedures for administrative appeal. The Director's determination to disapprove a permanent closure report must include: ()

- a. Identification of errors or inaccuracies in the permanent closure report; ()
- b. Issues or details that require additional clarification; ()
- c. Failures to fully implement the approved permanent closure plans; ()
- d. Outstanding violations or other noncompliance issues; and ()
- e. Other issues supporting the Department's disagreement with the contents, final conclusions or recommendations of the permanent closure report. ()

503. -- 549. (RESERVED)

550. VALIDITY AND DURATION OF PERMITS.

A permit remains valid until the Director determines that permanent closure is completed or the Director revokes or modifies the permit. ()

551. -- 649. (RESERVED)

650. FINANCIAL ASSURANCE.

01. Financial Assurance Required. The permittee is required to provide financial assurance pursuant to the Idaho Mined Land Reclamation Act, Chapter 15, Title 47, Idaho Code, and the rules promulgated thereunder. The Department will not issue a permit under these rules to a cyanidation facility unless a permanent closure plan for the cyanidation facility has been submitted for approval under Chapter 15, Title 47, Idaho Code. Any permit issued under these rules will prohibit construction and operation of the cyanidation facility until the permittee submits proof acceptable to the Department that financial assurance for the cyanidation facility permanent closure plan has been provided as required by Chapter 15, Title 47, Idaho Code. ()

02. Insufficiency. In the event the financial assurance is forfeited as described in the Idaho Mined Land Reclamation Act, Chapter 15, Title 47, Idaho Code, the Department may seek to recover the amount necessary to implement permanent closure under the Department-issued permit and these rules as provided by law. ()

651. -- 749. (RESERVED)

750. PERMIT MODIFICATION.

- 01. Cause for Permit Modification.** Causes for permit modification are: ()
- a. A material modification or material expansion in the cyanidation facility operation, design or closure plan; or ()

- b. Natural phenomena substantially different from those anticipated in the original permit. ()
- 02. Modification at Request of Permittee.** Requests for modification from the permittee must include: ()

 - a. A written description of the modification(s); ()
 - b. Data supporting the modification request; and ()
 - c. Causes and anticipated effects of the modification. ()
- 03. Modification at Request of Director.** Pursuant to Subsection 750.01, if the Director determines that cause exists for permit modification, the Director will notify the permittee in writing and request information necessary for the Director to modify the permit. ()
- 04. Modification Procedure.** The Director will evaluate the request for a permit modification, based on the information provided in Subsection 750.02 or otherwise obtained by the Department, and determine if the modification requires a major permit modification or a minor permit modification. ()

 - a. Major permit modifications are subject to the provisions of Sections 100, 200 through 205, 300, 400, and 450. ()
 - b. Minor permit modifications are not subject to the provisions of Sections 100, 300 and 400. The permittee must notify and receive approval from the Department prior to making minor modifications. ()
- 05. Major Permit Modifications.** Changes that require a major permit modification include but are not limited to: ()

 - a. Material modifications or material expansions to a cyanidation facility as defined by these rules; ()
 - b. A significant increase or decrease in the time the cyanidation facility is expected to be in operation; or ()
 - c. Requests to modify or change water quality compliance criteria and/or water quality compliance monitoring points. ()
- 06. Minor Permit Modifications.** Minor permit modifications are those that, if granted, would not result in any increased hazard to the environment or to the public health. Within thirty (30) days of receipt of a written request for a minor modification, the Department will complete an evaluation of the request and either approve or deny the request in writing. Minor modifications may include but are not limited to: ()

 - a. The correction of typographical errors in an approved permit; ()
 - b. Legal transfer of ownership or operational control; ()
 - c. A change in the requirements for monitoring or reporting frequency of the quality or quantity of the project air, water or waste generated; ()
 - d. A change in the cost estimates submitted by a permittee to the Idaho Department of Lands to complete permanent closure; and ()
 - e. A change or modification that is required by a state or federal requirement that supersedes the authorities of these rules. ()

751. -- 799. (RESERVED)

800. TRANSFER OF PERMITS.

01. Transfer of Permits Allowed. A permit may be transferred to a new permittee if such permittee provides written notice to the Director containing: ()

a. A specific date for transfer of permit responsibility, coverage, and liability between the current and new permittees; ()

b. Demonstration that the new permittee has established appropriate financial assurance for permanent closure of the facility; and ()

c. The information required in Subsections 100.03.b., 100.03.d., 100.03.e. and 100.03.g. ()

02. Decision. The Director will either approve of or deny the transfer of the permit within thirty (30) days of receipt of notice that the current permittee wishes to transfer the permit to a new permittee. ()

03. Basis for Transfer Denial. The Director will deny the request for the permit transfer if the new permittee has not provided the information required in Subsection 800.01. ()

801. -- 849. (RESERVED)

850. PERMIT REVOCATION.

01. Cause for Revocation. A material violation of a permit or these rules may be grounds for the Director to revoke a permit. A violation that is shown to have occurred as the result of an unforeseeable act of God despite a permittee's reasonable efforts to comply with all applicable legal requirements will not be considered grounds for revocation. ()

02. Preliminary Decision. The Director will provide the permittee written notice of a preliminary decision to revoke a permit, including a statement of the reasons for the preliminary decision and reference to the procedure for requesting a revocation hearing under Subsection 850.03. ()

03. Revocation Hearing. A preliminary decision to revoke a permit becomes final thirty-five (35) days after the date of the written notice of the preliminary decision unless the permittee requests in writing an administrative hearing before the preliminary decision becomes final. A request for an administrative hearing must be in the form of and will be considered as a petition to initiate a contested case under IDAPA 58.01.23, "Rules of Administrative Procedure Before the Board of Environmental Quality." ()

851. -- 899. (RESERVED)

900. VIOLATIONS.

01. Failure to Comply. Failure by a permittee to comply with the provisions of these rules or with any permit condition is a violation of these rules. ()

02. Falsification of Statements and Records. It is a violation of these rules for any person to knowingly make a false statement, representation, or certification in any application, registration, report, document, or record developed, maintained, or submitted pursuant to these rules or the conditions of a permit. ()

03. Discharges. Any unauthorized discharge is a violation of these rules. ()

901. -- 999. (RESERVED)

58.01.14 – RULES GOVERNING FEES FOR ENVIRONMENTAL OPERATING PERMITS, LICENSES, AND INSPECTION SERVICES

000. LEGAL AUTHORITY.

Pursuant to Sections 39-105, 39-107 and 39-119, Idaho Code, the Board of Environmental Quality is authorized to promulgate rules establishing reasonable fees to be charged and collected for any service rendered by the Department of Environmental Quality. ()

001. TITLE AND SCOPE.

01. Title. The rules are titled IDAPA 58.01.14, “Rules Governing Fees for Environmental Operating Permits, Licenses, and Inspection Services.” ()

02. Scope. These rules establish reasonable fees for environmental operating permits, licenses, inspection services and waiver application processing rendered by the Department of Environmental Quality or its designees. ()

002. WRITTEN INTERPRETATIONS.

In accordance with Section 67-5201(19)(b)(iv), any written statements pertaining to the interpretation of these rules will be available for review at the Department of Environmental Quality, 1410 N. Hilton, Boise, ID 83706-1255. ()

003. ADMINISTRATIVE APPEALS.

Persons may be entitled to appeal agency actions authorized under this chapter pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure before the Board of Environmental Quality.” ()

004. INCORPORATION BY REFERENCE.

These rules do not contain documents incorporated by reference. ()

005. OFFICE – OFFICE HOURS – MAILING ADDRESS AND STREET ADDRESS.

The state office of the Department of Environmental Quality and the office of the Board of Environmental Quality are located at 1410 N. Hilton, Boise, Idaho 83706-1255, telephone number (208) 373-0502. The office hours are 8 a.m. to 5 p.m. Monday through Friday. ()

006. CONFIDENTIALITY OF RECORDS.

Information obtained by the Department under these rules is subject to public disclosure pursuant to the provisions of Chapter 1, Title 74, Idaho Code, and IDAPA 58.01.21, “Rules Governing the Protection and Disclosure of Records in the Possession of the Idaho Department of Environmental Quality.” ()

007. DEFINITIONS.

01. Board. The Idaho Board of Environmental Quality. ()

02. Department. The Idaho Department of Environmental Quality or its designee. ()

03. Director. The Director of the Idaho Department of Environmental Quality or his designee. ()

008. -- 099. (RESERVED)

100. ENVIRONMENTAL FEES.

The fees specified in Sections 101 through 199 shall be charged for the following environmental services rendered by the Department or its designees. Fees for services rendered by designees that are equivalent or greater than the fees listed in Sections 101 through 199 may be adopted by the district health departments or local government. The fees are to be paid by the party receiving the services to the Department or designee performing the service, in the time, place and manner specified by the performing entity. ()

101. -- 109. (RESERVED)

110. INDIVIDUAL AND SUBSURFACE SEWAGE DISPOSAL SYSTEM PERMIT.

For those services rendered in the process of issuing installation permits for individual and subsurface sewage disposal systems (see IDAPA 58.01.03, “Individual/Subsurface Sewage Disposal Rules and Rules for Cleaning of Septic Tanks”), the following fees apply: ()

01. Individual Households or Buildings. For individual households or buildings, if the individual and subsurface sewage disposal system is a new installation or a replacement or expansion of an existing system, the fee shall be ninety dollars (\$90). ()

02. Multiple Households or Buildings. For individual and subsurface sewage disposal systems serving more than one (1) household or building in any combination, the fee shall be ninety dollars (\$90) plus ten dollars (\$10) per each household or per each two hundred fifty (250) gallons of flow from buildings. ()

111. -- 114. (RESERVED)

115. INDIVIDUAL AND SUBSURFACE SEWAGE DISPOSAL SYSTEM PUMPER PERMIT.

For those services rendered in the process of issuing permits to persons operating individual and subsurface sewage disposal system pumping equipment (see IDAPA 58.01.03, “Individual/Subsurface Sewage Disposal Rules and Rules for Cleaning of Septic Tanks”), the fee shall be forty dollars (\$40) plus ten dollars (\$10) for each tank truck or tank per annum. ()

116. -- 119. (RESERVED)

120. SUBSURFACE SEWAGE DISPOSAL SYSTEM INSTALLER'S REGISTRATION PERMIT.

For those services rendered in the process of issuing Installer's Registration Permits (see IDAPA 58.01.03, “Individual/Subsurface Sewage Disposal Rules and Rules for Cleaning of Septic Tanks”), the fee shall be fifty dollars (\$50) per annum for a standard and basic alternative system installer's registration permit and one hundred dollars (\$100) per annum for a standard, basic and complex alternative system installer's registration permit. ()

121. -- 149. (RESERVED)

150. PARCEL SURVEY.

For those services rendered in evaluating existing water supply or sewage disposal systems when such evaluation is a condition for the sale of real property, the fee shall be sixty dollars (\$60) excluding laboratory services. ()

151. -- 159. (RESERVED)

160. SANITARY RESTRICTION ADMINISTRATION.

For those services rendered in the administration of sanitary restrictions, pursuant to Section 50-1326, Idaho Code, the following fees apply: ()

01. Subdivisions or Plats Proposing Individual and Subsurface Sewage Disposal System Discharge to Subsurface. For subdivisions or plats for which sewage treatment and disposal systems are designed to discharge to the subsurface, the fee shall be one hundred dollars (\$100) plus twenty dollars (\$20) per lot. ()

02. Subdivisions or Plats Proposing Other Than Individual and Subsurface Sewage Disposal System Discharge to Subsurface. For subdivisions or plats for which sewage treatment and disposal systems are not designed to discharge to the subsurface, the fee shall be twenty-five dollars (\$25). ()

161. -- 899. (RESERVED)

900. WAIVER OF FEES.

Upon written application to the Director of the Department of Environmental Quality, a waiver of a specific fee may be granted to an applicant who is required by these rules to pay such a fee. ()

01. Determination of Good Cause. Good cause for such a waiver must be shown before it shall be granted by the Director. Good cause may include hardship or extenuating circumstances, as determined by the Director. ()

02. Duration of Waiver. If the fee sought to be waived becomes due periodically, the fee may be waived for a designated period of time. ()

03. Limitations. Granting of a waiver shall not be considered as precedent or be given any force or effect in any other proceeding. ()

901. -- 999. (RESERVED)

58.01.18 – IDAHO LAND REMEDIATION RULES

000. LEGAL AUTHORITY.

Pursuant to the provisions of Sections 39-105, 39-107, 39-4405, 39-7210, Idaho Code, the Department of Environmental Quality has the authority to promulgate and adopt rules to carry out the purposes of the Idaho Land Remediation Act, Sections 39-7201 to 39-7210, Idaho Code. ()

001. TITLE AND SCOPE.

01. Title and Scope. These rules are titled IDAPA 58.01.18, “Idaho Land Remediation Rules,” and shall be applicable to eligible persons who wish to enter into a voluntary remediation agreement with the state to minimize risk of harm to public health and the environment and to restore the economic viability of contaminated real property. ()

02. Intent. The Idaho Land Remediation rules have been adopted with the purpose of fostering the remediation, transfer, reuse, or redevelopment of sites or groups of sites based on risk to human health and the environment where releases or threatened release of hazardous substances or petroleum exists. It is also the intent of these rules to establish a voluntary program for the remediation of hazardous substance or petroleum contaminated sites that will encourage innovation and cooperation between the state, local communities, and interested persons and will promote the economic revitalization of property. It is intended that this program will provide for an expedited remediation process by eliminating the need for many adversarial enforcement actions and delays in response action plan approvals. ()

002. WRITTEN INTERPRETATIONS.

As described in Section 67-5201(19)(b)(iv), Idaho Code, the Department of Environmental Quality may have written statements which pertain to the interpretation of the rules of this chapter. If available, such written statements can be inspected and copied at cost at the Department of Environmental Quality, 1410 N. Hilton, Boise, Idaho 83706-1255. ()

003. ADMINISTRATIVE APPEALS.

Persons may be entitled to appeal agency actions authorized under these rules pursuant to IDAPA 58.01.23, “Rules of Administrative Procedure Before the Board of Environmental Quality.” ()

004. -- 009. (RESERVED)

010. DEFINITIONS AND ABBREVIATIONS.

For the purpose of the rules contained in IDAPA 58.01.18, the following definitions and abbreviations apply. ()

01. Act. Idaho Land Remediation Act, Title 39, Chapter 72, Idaho Code. ()

02. Applicant. A person who submits an application to participate in the voluntary remediation program under the Idaho Land Remediation Act, Title 39, Chapter 72, Idaho Code. ()

03. Board. The Idaho Board of Environmental Quality. ()

04. Department. The Idaho Department of Environmental Quality. ()

05. Director. The Director of Idaho Department of Environmental Quality or his authorized agent. ()

06. Hazardous Substance. Has the meaning set forth in Section 101(14) of the Comprehensive Environmental, Response, Compensation and Liability Act (CERCLA), 42 U.S.C. 9601 (14), as amended. ()

07. Natural Background Level. The level of any constituent in the affected media within a specified area as determined by representative measurements of the quality of that media unaffected by human activities. ()

08. Person. Any individual, association, partnership, firm, joint stock company, trust, estate, political subdivision, public or private corporation, state or federal governmental department, agency or instrumentality, or any other legal entity which is recognized by law as the subject of rights and duties. ()

09. Petroleum. Includes petroleum asphalt and crude oil or any part of petroleum asphalt or crude oil that is liquid at standard conditions of temperature and pressure (sixty (60) degrees Fahrenheit and fourteen and

seven-tenths (14.7) pounds per square inch absolute). ()

10. Release. Any spilling, leaking, pumping, pouring, emitting, emptying, discharging, injecting, escaping, leaching, dumping, or disposing into the environment, including the abandonment or discarding of barrels, containers, or other closed receptacles containing any hazardous substance or petroleum. ()

11. Remediation. Remediation means any of the following: ()

a. Actions necessary to prevent, minimize, or mitigate damages to the public health or welfare or to the environment, which may otherwise result from a release or threat of a release; or ()

b. Actions consistent with a permanent remedy taken instead of, or in addition to, removal actions in the event of a release or threatened release of a hazardous substance or petroleum into the environment to eliminate the release of hazardous substances or petroleum so that the hazardous substances or petroleum do not migrate to cause substantial danger to present or future public health or welfare or the environment; or ()

c. The cleanup or removal of released hazardous substances or petroleum from the environment. ()

12. Site. A parcel of real estate for which an application has been submitted under Section 39-7204, Idaho Code. ()

011. -- 019. (RESERVED)

020. APPLICATION TO PARTICIPATE.

01. Application Required. In order to participate in the voluntary remediation program as established by the Idaho Land Remediation Act and these rules, a person shall submit an application to the Department. ()

02. Contents of Application. The application shall be on a form provided by the Department and include, or be accompanied by, the following: ()

a. Identification of the applicant and the applicant's relationship to the site; ()

b. Identification of the owner or operator of the site, if different than Subsection 020.02.a. of these rules; ()

c. General information pertaining to the site, including the assessors's parcel number(s), site name, and location; ()

d. An environmental assessment that conforms to ASTM Standard Practice E 1527, Environmental Site Assessments: Phase I Environmental Site Assessment Process, as amended, or equivalent; ()

e. An application fee in the amount of two hundred and fifty dollars (\$250); and ()

f. Other background information as requested on the application form provided by the Department as necessary to determine eligibility to participate in the voluntary remediation program. ()

03. Application Processing Procedure. ()

a. Not more than thirty (30) days after receiving an application the Department shall determine if the applicant is eligible to participate in the voluntary remediation program and notify the applicant of the Department's decision. If the Department fails to comply with this subsection, the applicant shall be considered eligible for the purposes of these rules. ()

b. As specifically set forth in the Department's application form, an application may be rejected for the reasons set forth in Section 39-7204(4), Idaho Code. ()

c. Rejection of an application for any of the reasons set forth in Section 39-7204(4)(a), Idaho Code, or Section 39-7204(4)(b), Idaho Code, is a final agency action. ()

021. VOLUNTARY REMEDIATION AGREEMENTS.

01. Negotiation of Voluntary Remediation Agreement. If the Department accepts an application pursuant to Section 39-7204, Idaho Code, the applicant may enter into a voluntary remediation agreement with the Department. The Department shall not evaluate a voluntary remediation work plan until the voluntary remediation agreement is signed by the applicant and the Director. ()

02. Contents of Agreement. The voluntary remediation agreement shall include the following: ()

a. A provision for the Department's oversight including access to site and pertinent site records; ()

b. A timetable for the Department to do the following: ()

i. Reasonably review and evaluate the adequacy of the work plan; ()

ii. Make a determination concerning the approval or rejection of the work plan; ()

iii. Identify, to the extent possible, permits or approvals required to initiate and complete a voluntary remediation work plan. ()

c. A provision to modify the voluntary remediation agreement and voluntary remediation work plan based upon unanticipated site conditions; ()

d. An estimation of costs the Department may incur associated with performing all of the tasks, duties and services related to the relevant application or voluntary remediation program activities, as specified in Subsection 021.04 of these rules; ()

e. A mechanism and schedule for the payment of all actual reasonable costs incurred by the Department in the review and oversight of the work plan; ()

f. A requirement that the applicant shall comply with any applicable zoning authorities or other local, state, or federal law, in implementing the voluntary remediation work plan; ()

g. Any other conditions considered necessary by the Department or the applicant concerning the effective and efficient implementation of these rules. ()

03. Reimbursement of Costs Included in Agreement. ()

a. The voluntary remediation agreement shall include a provision for the payment and accounting of reasonable oversight costs incurred by the Department in connection with the person's application and participation in the voluntary remediation program. ()

b. Costs incurred by the Department for oversight of voluntary remediation actions will be reimbursed in the following manner, which shall be specified in the voluntary remediation agreement. ()

i. The applicant shall deposit two thousand five hundred dollars (\$2,500) with the Department. ()

ii. The unused portion of the deposit will be returned to the applicant within sixty (60) days of Department issuance of a certificate of completion. ()

iii. Should funding be required for costs incurred in excess of the initial two thousand five hundred dollars (\$2,500) deposit, the Department will, in advance, notify the applicant of required successive deposits in the

amount of two thousand five hundred dollars (\$2,500). ()

04. Oversight Costs. Oversight costs shall include the following: ()

a. The review, processing and negotiation of the voluntary remediation agreement; ()

b. The review, processing and negotiation of the voluntary remediation work plan; ()

c. Conducting public hearing and dissemination of public notices; ()

d. Oversight of work performed in accordance with the voluntary remediation work plan; ()

e. Issuance of the certificate of completion; ()

f. Issuance of a covenant not to sue; ()

g. Administrative expenses associated with cost recovery activities. ()

05. Enforceability of Agreement. Upon signing of the voluntary remediation agreement by the Department and the applicant, the voluntary remediation agreement shall constitute a contract between the Department and the applicant enforceable in accordance with its terms, subject to: ()

a. The Department's right to rescind the voluntary remediation agreement as provided in Section 39-7208, Idaho Code; and ()

b. The applicant's right to terminate the voluntary remediation agreement under Subsection 021.06 of these rules. ()

06. Reasons for Which a Person May Terminate a Voluntary Remediation Agreement. An applicant may terminate the voluntary remediation agreement for any of the following reasons: ()

a. The applicant decides to terminate the voluntary remediation agreement rather than submit additional or corrected information to the Department as provided in Section 39-7206(2)(b), Idaho Code; or ()

b. The voluntary remediation work plan is modified or rejected as provided in Section 39-7206(5), Idaho Code. ()

07. Effect of Termination of Agreement. The termination of a voluntary remediation agreement as provided in Section 39-7206, Idaho Code, shall not relieve the applicant from the obligation to comply with any applicable authorities regarding the contamination at the site, and the Department may initiate administrative or judicial action under applicable authorities. ()

022. VOLUNTARY REMEDIATION WORK PLAN.

01. Submittal of Proposed Voluntary Remediation Work Plan. An applicant whose application has been accepted by the Department may submit a proposed voluntary remediation work plan to the Department. The Department will evaluate the work plan according to the terms and conditions of a voluntary remediation agreement signed by the Department and the applicant. ()

02. Contents of Voluntary Remediation Work Plan. The voluntary remediation work plan shall include the following: ()

a. The current and reasonably anticipated future use of on-site ground and surface water; ()

b. The current and reasonably anticipated future uses of the site and immediately adjacent properties; ()

c. If a risk-based concentration is proposed as a remediation standard, the voluntary remediation work plan shall include an estimate of the human and environmental risk from releases or threatened releases of hazardous substances or petroleum at the site based upon the current use of the site and adjacent properties and reasonably anticipated future uses of the site; ()

d. Proposed remediation standards developed in accordance with Section 023 of these rules; ()

e. A proposed statement of work; ()

f. A schedule to accomplish the proposed statement of work. ()

03. Information Supporting the Voluntary Remediation Work Plan. Sufficient information to support the voluntary remediation work plan shall be submitted and may include the following: ()

a. Site assessment information including: ()

i. A legal description of the site and a map identifying the location and size of facilities and relevant features, such as property boundaries, surface topography, surface and subsurface structures, and utility lines; ()

ii. The physical characteristics of site facilities and contiguous areas, including the location of any surface water bodies and ground water aquifers; ()

iii. The location of any wells located on the site or on areas within one-half mile radius of the site and a description of the use of those wells; ()

iv. The operational history of the facility, including ownership, and the current use of the facility; ()

v. Information on the methods and results of investigations concerning the nature and extent of any releases or threatened releases of hazardous substances or petroleum that have occurred at the site and a map showing general areas of concentrations of these hazardous substances or petroleum; ()

vi. A site investigation sampling and analysis plan, and quality assurance project plan; ()

vii. Any sampling results or other data that characterizes the soil, air, ground water, surface water, or sediments on the site; and ()

viii. Available information on the environmental regulatory and compliance history of the site, including all applicable environmental permits. ()

b. Risk evaluation information including: ()

i. An evaluation of the data collected during the site investigation including identification of chemicals of potential concern; ()

ii. An exposure assessment of all potential pathways of exposure; ()

iii. A toxicity assessment estimating the toxicity of both carcinogens and non-carcinogens; ()

iv. Identify site conditions which may affect or limit migration of the contamination; and ()

v. A risk characterization that evaluates the uncertainties associated with the site investigation, the likelihood of exposures, and the toxicity of the contaminants. ()

04. Review and Evaluation of Work Plan. The Department shall review and evaluate the voluntary remediation work plan, provide public notice, accept public comments and may make the determination whether to hold public hearings in accordance with Section 39-7206, Idaho Code, and the voluntary remediation agreement.

()

a. For purposes of determining whether to hold a public hearing in accordance with Section 39-7206, Idaho Code, the Department will consider the following a significant number of requests for a public hearing: ()

i. Twenty-five (25) written requests from potentially affected persons; or ()

ii. One (1) or more written requests from an organization representing twenty-five (25) or more potentially affected members. ()

b. The Department shall provide for a public comment period of at least thirty (30) days following publication of a public notice under Section 39-7206(3)(d), Idaho Code. ()

c. Pursuant to Section 39-7206, Idaho Code, the Department may approve, modify and approve, or reject a voluntary remediation work plan. ()

d. The Department may reject or approve with modification any voluntary remediation work plan that does not achieve the remediation standards developed and approved by the Department pursuant to Section 023 of these rules. ()

e. If the Department rejects a voluntary remediation work plan, the Department shall: ()

i. Notify the applicant and specify the reasons for rejection; ()

ii. Provide the applicant an opportunity according to the schedule in the voluntary remediation agreement to amend the work plan; and ()

iii. The applicant may appeal the Department's decision to reject the work plan as provided in Section 39-7206, Idaho Code. ()

f. If an applicant determines not to amend a rejected work plan to the satisfaction of the Department, the voluntary remediation agreement shall be terminated as provided in Subsection 021.06 of these rules. ()

05. Modification to an Approved Voluntary Remediation Work Plan That Requires Additional Public Notice and Comment. After the close of the public comment period and the Department's approval of the voluntary remediation work plan, situations may arise that result in modification of an approved voluntary remediation work plan. Depending upon the significance of the modification, another opportunity for public notice and comment may be appropriate. ()

a. The Department need not provide for an additional public notice and comment period if the proposed modifications to the voluntary remediation work plan are limited to minor changes. A minor change to the voluntary remediation work plan is a change that does not fundamentally alter the overall remedial approach. ()

b. The Department shall provide for an additional public notice and comment period if the proposed modifications to the voluntary remediation work plan are fundamental. A fundamental change is a change that requires reconsideration of the remediation proposed in the approved voluntary remediation work plan. ()

023. REMEDIATION STANDARDS.

01. Voluntary Remediation Work Plan Must Achieve Health-Based and Environmental Remediation Standards. All hazardous substance or petroleum concentrations in media which exceed the health-based and environmental remediation standards shall be addressed through appropriate remediation and in accordance with the appropriate technical standards based upon the following: ()

a. Site characteristics; ()

b. Hazardous substances or petroleum; and ()

- c. Technical guidance approved by the Department. ()

02. Establishment of Remediation Standards. The remediation standards utilized in these rules shall be no more stringent than applicable or relevant and appropriate federal and state standards and are consistent with 42 U.S.C. 9621, taking into consideration site specific conditions. An applicant who submits a voluntary remediation work plan for approval by the Department shall select and attain compliance with one (1) or more of the following remediation standards when implementing a voluntary remediation work plan: ()

a. Attainment of a natural background level demonstrated by the collection and analysis of representative samples from environmental media of concern where contamination occurs. Evaluation of representative samples shall be conducted through the application of statistical tests specified in a voluntary remediation work plan. ()

b. An established state or federal generic numerical health standard which achieves an appropriate health-based level so that any substantial present or probable future risk to human health or the environment is eliminated or reduced to protective levels based upon present and reasonably anticipated future uses of the site. ()

c. Risk-based concentrations calculated for the hazardous substance or petroleum using site-specific risk assessment procedures. ()

d. An applicant may use a combination of standards from Subsections 023.02.a. through 023.02.c. to implement a voluntary remediation work plan. ()

024. IMPLEMENTATION OF VOLUNTARY REMEDIATION WORK PLAN.

01. Implementation. An approved voluntary remediation work plan shall be fully implemented by the applicant according to the terms and conditions of the voluntary remediation agreement, these rules and the Idaho Land Remediation Act. ()

02. Permits or Approvals Necessary for Implementation. The Department shall assist in the timely issuance of Department permits or approvals required to initiate and complete a voluntary remediation work plan. ()

03. Progress Reports. An applicant implementing a voluntary remediation work plan shall submit periodic progress reports to the Department according to the terms and conditions of the voluntary remediation agreement. ()

04. Voluntary Remediation Work Plan Completion Report. When the applicant believes the objectives of the voluntary remediation work plan have been achieved and successfully implemented, the applicant shall submit to the Department a voluntary remediation work plan completion report together with a request that the Department issue a certificate of completion. ()

a. The voluntary remediation work plan completion report shall contain information sufficient for the Department to determine whether the voluntary remediation work plan objectives were achieved and the voluntary remediation work plan was successfully implemented. ()

b. The Department shall, within thirty (30) days of the receipt of a voluntary remediation work plan completion report and a request for a certificate of completion, notify the applicant whether the voluntary remediation work plan has been successfully implemented. ()

c. If the Department notifies the applicant that the voluntary remediation work plan has not been successfully implemented, the applicant shall do the following: ()

- i. Implement the voluntary remediation work plan to the satisfaction of the Department; and ()

ii. Resubmit the voluntary remediation work plan completion report. ()

d. If a voluntary remediation work plan completion report demonstrates that the voluntary remediation work plan has been successfully implemented, the Department shall certify such facts by issuing the applicant a certificate of completion. The applicant shall record the certificate of completion with the deed for the site on which the remediation took place. ()

e. The Department may provide a certificate of completion conditioned upon continued monitoring, recordation or maintenance of institutional or engineering controls, or other continuing actions by the applicant. ()

f. Decisions by the Department involving the voluntary remediation work plan completion reports required under this section are considered final agency actions. ()

025. COVENANT NOT TO SUE.

01. Negotiation and Provision of Covenant. Within thirty (30) days of receipt of the Department's certificate of completion, the applicant may request the Department negotiate and provide a covenant not to sue as provided in Section 39-7207, Idaho Code. Any such covenant not to sue may be conditioned upon continuing monitoring, recordation or maintenance of institutional or engineering controls, or other continuing actions required of the applicant pursuant to an approved voluntary remediation work plan. ()

02. Rescission of Covenant. The Department may rescind a covenant not to sue in accordance with Section 39-7208, Idaho Code. If the Department rescinds a covenant not to sue, it may initiate administrative or judicial action as provided in Sections 39-7207 and 39-7208, Idaho Code. The Department shall also notify the county in which the site exists of rescission of the covenant not to sue for purposes of determining ad valorem exemptions provided under Section 63-105II, Idaho Code. ()

03. Continuing Compliance. During the implementation of an approved voluntary remediation work plan, the Department shall not bring an action, including an administrative or judicial action for any liability for remediation relating to the release or threatened release of a hazardous substance or petroleum that is the subject of the voluntary remediation work plan, against a person who entered into a voluntary remediation agreement and who is implementing the voluntary remediation work plan in accordance with such agreement implementing the voluntary remediation work plan. ()

026. LENDER LIABILITY.

01. General Statement. Pursuant to Section 39-7209, Idaho Code, a person who maintains indicia of ownership primarily to protect a security interest in a site, as defined in Subsection 010.12 of these rules, and who does not participate in the management of the site, shall not be considered an owner or operator of that site, nor liable under any pollution control or other environmental protection law, rule or regulation, or otherwise responsible for any environmental contamination or response activity costs consistent with United States environmental protection agency policy, 60 Federal Register 63517, dated December 11, 1995, as amended. This Section 026 sets out the rules of the Board regarding lender liability pursuant to Sections 39-7209 and 39-7210(6), Idaho Code. ()

02. Definitions and Operative Provisions. ()

a. "Indicia of ownership" means evidence of a security interest, evidence of an interest in a security interest, or evidence of an interest in real or personal property securing a loan or other obligation, including any legal or equitable title or deed to real or personal property acquired through or incident to foreclosure or its equivalents. Evidence of such interests include, but are not limited to, mortgages, deeds of trust, liens, surety bonds and guaranties of obligations, title held pursuant to a lease financing transaction in which the lessor does not select initially the leased property (hereinafter "lease financing transaction"), legal or equitable title obtained pursuant to foreclosure, and their equivalents. Evidence of such interests also includes assignments, pledges or other rights to or other forms of encumbrance against property that are held primarily to protect a security interest. A person is not required to hold title or a security interest in order to maintain indicia of ownership. ()

i. A “holder” is a person who maintains indicia of ownership primarily to protect a security interest in a site. A holder includes the initial holder (such as a loan originator); any subsequent holder (such as a successor-in-interest or subsequent purchaser of the security interest on the secondary market); a guarantor of an obligation, surety, or any person who holds ownership indicia primarily to protect a security interest; or a receiver or other person who acts on behalf or for the benefit of a holder. ()

ii. A “borrower,” “debtor,” or “obligor” is a person who owns, leases, occupies or operates a site encumbered by a security interest. ()

b. “Primarily to protect a security interest” means that the holder’s indicia of ownership are held primarily for the purpose of securing payment or performance of an obligation. ()

i. “Security interest” means an interest in a site, created or established for the purpose of securing a loan or other obligation. Security interests include, but are not limited to, mortgages, deeds of trust, liens, security interests under Article 9 of the Uniform Commercial Code, and title pursuant to lease financing transactions. ()

ii. “Primarily to protect a security interest” does not include indicia of ownership held primarily for investment purposes, nor ownership indicia held primarily for purposes other than as protection for a security interest. A holder may have other, secondary reasons for maintaining indicia of ownership, but the primary reason why any ownership indicia are held must be as protection for a security interest. ()

c. Participation in management defined. The term “participating in the management of a site” means that the holder is engaging in acts of site management, as defined herein. ()

i. Actions that are participation in management. Participating in the management of a site means actual participation by the holder in the management or operational affairs of the site by the holder, and does not include the mere capacity or ability to influence, or the unexercised right to control, site operations. A holder is participating in management, while the borrower is still in possession of the site encumbered by the security interest, only if the holder either: ()

(1) Exercises decision making control over the borrower’s environmental compliance, such that the holder has undertaken responsibility for the borrower’s hazardous substance or petroleum handling or disposal practices; or ()

(2) Exercises control at a level comparable to that of a manager of the borrower’s enterprise, such that the holder has assumed or manifested responsibility for the overall management of the enterprise encompassing the day-to-day decision making of the enterprise with respect to (1) environmental compliance or (2) all, or substantially all, of the operational (as opposed to financial or administrative) aspects of the enterprise other than environmental compliance. ()

ii. Actions that are not participation in management. ()

(1) Actions at the inception of the loan or other transaction. No act or omission prior to the time that indicia of ownership are held primarily to protect a security interest constitutes evidence of participation in management. A prospective holder who undertakes or requires an environmental inspection of the site or to comply or come into compliance (whether prior or subsequent to the time that indicia of ownership are held primarily to protect a security interest) with any applicable law or regulation, is not by such action considered to be participating in the site’s management. Neither Section 39-7209, Idaho Code, or these rules require a holder to conduct or require an inspection to qualify for the exemption, and the liability of a holder cannot be based on or affected by the holder not conducting or not requiring an inspection. ()

(2) Loan policing and workout. Actions that are consistent with holding ownership indicia primarily to protect a security interest do not constitute participation in management. The authority for the holder to take such actions may, but need not, be contained in contractual or other documents specifying requirements for financial, environmental and other warranties, covenants, conditions, representations or promises from the borrower. Loan policing and workout activities cover and include all activities up to foreclosure and its equivalents. ()

(a) Policing the security interest or loan. A holder who engages in policing activities prior to foreclosure will remain within the exemption provided that the holder does not by such actions participate in the management of the site. Such actions include, but are not limited to, requiring the borrower to clean up the site during the term of the security interest; requiring the borrower to comply or come into compliance with applicable federal, state and local environmental and other laws, rules and regulations during the term of the security interest; securing or exercising authority to monitor or inspect the site (including on-site inspections) in which indicia of ownership are maintained, or the borrower's business or financial condition during the term of the security interest; or taking other actions to adequately police the loan or security interest (such as requiring a borrower to comply with any warranties, covenants, conditions, representations or promises from the borrower). ()

(b) Policing activities also include any activities taken by the holder to require a borrower to comply with a voluntary remediation work plan, or by agreement with the Department, to complete a voluntary remediation work plan, provided that the holder does not otherwise participate in the management of the site. ()

(c) Loan workout. A holder who engages in workout activities prior to foreclosure and its equivalents will remain within the exemption provided that the holder does not by such action participate in the management of the site. For purposes of this rule, "workout" refers to those actions by which a holder, at any time prior to foreclosure and its equivalents, seeks to prevent, cure or mitigate a default by the borrower or obligor, or to preserve, or prevent the diminution of, the value of the security. ()

d. Foreclosure on a site and post-foreclosure activities. ()

i. Foreclosure. Indicia of ownership that are held primarily to protect a security interest include legal or equitable title or deed to real or personal property acquired through or incident to foreclosure and its equivalents. "Foreclosure and its equivalents" includes purchase at foreclosure sale; acquisition or assignment of title in lieu of foreclosure; termination of a lease or other repossession; acquisition to a right to title or possession; an agreement in satisfaction of the obligation; or any other formal or informal manner (whether pursuant to law or under warranties, covenants, conditions, representations or promises from the borrower) by which the holder acquires title to or possession of the secured property. The indicia of ownership held after foreclosure continue to be maintained primarily as protection for a security interest, provided that the holder undertakes to sell, re-lease or otherwise divest itself of the site, in a reasonably expeditious manner, using whatever commercially-reasonable means are relevant or appropriate with respect to the site, taking all facts and circumstances into consideration, and provided that the holder did not participate in management prior to foreclosure. ()

ii. Holding foreclosed property for disposition and liquidation. A holder, who did not participate in management prior to foreclosure and its equivalents, may sell, re-lease, liquidate, maintain business activities, wind up operations, undertake any response action under federal, state or local environmental laws, rules or regulations, undertake completion of an approved voluntary remediation work plan by agreement with the Department, and take measures to preserve, protect or prepare the secured asset prior to sale or other disposition, without voiding the exemption provided by Section 39-7209, Idaho Code, and these rules. ()

027. INSTITUTIONAL CONTROLS.

01. Purpose. ()

a. Institutional controls may be proposed by the applicant or the Department as an element of the voluntary remediation work plan. Institutional controls are measures undertaken to limit or prohibit activities that may interfere with the integrity of a cleanup action or result in exposure to hazardous substances or petroleum at a site. Such measures may be used to assure both the continued protection of human health and the environment and the integrity of a cleanup action in at least the following circumstances: ()

b. Where a cleanup action results in residual concentrations of hazardous substances or petroleum which exceed risk-based health standards; or ()

c. When the Department determines such controls are required to assure the continued protection of human health and the environment or the integrity of the cleanup action. ()

02. Prohibition of Use. Institutional controls should not be used as a substitute for cleanup actions that would otherwise be technically possible. ()

03. Institutional Controls. For the purposes of this section, institutional controls may include: ()

a. Physical measures, such as fences and signs, to limit activities that may interfere with the cleanup action or result in exposure to hazardous substances at the site; and ()

b. Legal and administrative controls, such as zoning restrictions, restrictive covenants, or equitable servitudes used to ensure such measures are maintained. ()

04. Legal Use Restrictions. Institutional controls may be described in an equitable servitude, restrictive covenant, or similar legal mechanism executed by the property owner and recorded in the county in which the site is located. The use of such legal use restrictions may be addressed in the voluntary remediation agreement, the certificate of completion, or the covenant not to sue. ()

05. Legal Use Restriction Requirements. Where appropriate, the legal use restriction requirement should: ()

a. Prohibit activities on the site that may interfere with a cleanup action, operation and maintenance, monitoring, or other measures necessary to assure the integrity of the cleanup action and continued protection of human health and the environment; ()

b. Prohibit activities that may result in the release of a hazardous substance or petroleum which was contained as a part of the remediation; ()

c. Require notice to the Department of the owner's intent to convey any interest in the site. Conveyance of title, easement, lease, or other interest in the property may be conditioned upon easement, lease, or other interest in the property for the continued operation, maintenance and monitoring of the cleanup action, and for continued compliance with this subsection; ()

d. Require notice and approval by the Department of any proposal to use the site in a manner which is inconsistent with the legal use restriction. ()

e. Grant the Department and its designated representatives the right to enter the property at reasonable times for the purpose of evaluating compliance with the voluntary remediation work plan and other required plans, including the right to take samples, inspect any remedial actions taken at the site, and to inspect records. ()

f. Contain other restrictions appropriate under the circumstances. ()

06. Compliance With Other Laws. It shall be the applicant's responsibility to comply with any applicable zoning authorities or other local, state, or federal law, in implementing the voluntary remediation work plan. ()

07. Financial Assurances. The Department may require the applicant to provide financial assurances, through a trust fund or other appropriate financial mechanism approved by the Department sufficient to cover all costs for ensuring the effectiveness of institutional controls or of operation and maintenance, including compliance monitoring and undertaking appropriate measures to ensure the integrity of institutional controls. ()

08. Removal of Restrictions. If the residual hazardous substances or petroleum remaining at the site are subsequently reduced in concentration such that risk-based health standards are met, then the owner may request the restrictive covenant or other restrictions be voided. The restrictive covenant or other restrictions may be removed, if the Department, after public notice and opportunity for comment, concurs. ()

028. -- 999. (RESERVED)

**58.01.25 – RULES REGULATING THE IDAHO POLLUTANT DISCHARGE
ELIMINATION SYSTEM PROGRAM**

000. LEGAL AUTHORITY.

The Department and the Board are authorized to formulate and adopt rules as are necessary to obtain approval of the IPDES program by EPA pursuant to Section 39-175C, Idaho Code. The Department is authorized to implement and enforce the rules in this chapter pursuant to the Sections 39-175A-C and the provisions of the Environmental Protection and Health Act, Sections 39-101 et seq., Idaho Code. The rules in this chapter are not effective until the requirements in Section 39-175C, Idaho Code, have been met and the United States EPA has approved, under 33 U.S.C. 1342(b), Idaho's administration of the IPDES program. ()

001. TITLE AND SCOPE.

01. Title. The rules are titled IDAPA 58.01.25, "Rules Regulating the Idaho Pollutant Discharge Elimination System Program." ()

02. Scope. These rules establish the procedures and requirements for the issuance and maintenance of permits for facilities or activities for which a person is required by Idaho Code and the Clean Water Act to obtain authorization to discharge pollutants to waters of the United States. These permits are referred to in these rules as "IPDES permits" or "permits." ()

002. CONFIDENTIALITY OF RECORDS.

01. Identifying Confidential Information. Information obtained by the Department under these rules is subject to public disclosure pursuant to the provisions of Chapter 1, Title 74, Idaho Code, and IDAPA 58.01.21 (Rules Governing the Protection and Disclosure of Records in the Possession of the Idaho Department of Environmental Quality). In accordance with Sections 74-101 through 74-119, Idaho Code, any information submitted to the Department pursuant to these rules may be claimed as confidential by the submitter. It is the responsibility of the submitter to give notice of the existence of a claim of confidentiality on each page or other portion of information at the time of submittal and such person has the burden of demonstrating that the information is confidential. ()

02. Denial of Confidential Claims. In accordance with Section 74-114, Idaho Code, a claim of confidentiality, including but not limited to a claim as to information claimed confidential as a trade secret, will be denied and any person may inspect and copy: ()

a. The name and address of any IPDES applicant or permittee; ()

b. The content of any IPDES permit; ()

c. IPDES permit applications, and information required to be submitted by IPDES application forms under Section 105 (Application for an Individual IPDES Permit), or IPDES General Permit Notice of Intent, and information required to be submitted under Section 130 (General Permits), whether the information is submitted on the application forms themselves or in any attachments used to supply information required by the application forms; and ()

d. Effluent data as defined in 40 CFR 2.302. ()

003. INCORPORATION BY REFERENCE OF FEDERAL REGULATIONS.

01. Availability of Reference Material. Codes, standards and regulations may be incorporated by reference in this rule pursuant to Section 67-5229, Idaho Code. Codes, standards or regulations adopted by reference throughout this rule are available in the following locations: ()

a. Department of Environmental Quality. Department of Environmental Quality, 1410 N. Hilton, Boise, ID 83706-1255. ()

b. Law Library. State Law Library, 451 W. State Street, P.O. Box 83720, Boise, ID 83720-0051. ()

c. Electronic Code of Federal Regulations (eCFR) <http://www.ecfr.gov/cgi-bin/ECFR>. ()

02. Incorporation by Reference. The following documents are incorporated by reference into these

rules. Any reference in these rules to requirements, procedures, or specific forms contained in any section or subsection constitute the full adoption by reference of that section or subsection, including any notes and appendices therein, unless expressly provided otherwise in these rules: ()

- a. [40 CFR 122.21\(r\)](#), revised as of July 1, 2020 (Application Requirements for Facilities with Cooling Water Intake Structures); ()
- b. [40 CFR 122.23](#), revised as of July 1, 2020 (Concentrated Animal Feeding Operations); ()
- c. [40 CFR 122.24](#), revised as of July 1, 2020 (Concentrated Aquatic Animal Production Facilities); ()
- d. [40 CFR 122.25](#), revised as of July 1, 2020 (Aquaculture Projects); ()
- e. [40 CFR 122.26\(a\)](#) through (b) and [40 CFR 122.26\(e\)](#) through (g), revised as of July 1, 2020 (Storm Water Discharges); ()
- f. [40 CFR 122.27](#), revised as of July 1, 2020 (Silvicultural Activities); ()
- g. [40 CFR 122.29\(d\)](#), revised as of July 1, 2020 (Effect of Compliance with New Source Performance Standards); ()
- h. [40 CFR 122.30](#) and [40 CFR 122.32](#) through [40 CFR 122.37](#), revised as of July 1, 2020 (Requirements and Guidance for Small Municipal Separate Storm Sewer Systems); ()
- i. [40 CFR 122.42\(e\)](#), revised as of July 1, 2020 (Additional Conditions Applicable to NPDES Permits for Concentrated Animal Feeding Operations); ()
- j. [Appendix A to 40 CFR 122](#), revised as of July 1, 2020 (NPDES Primary Industry Categories); ()
- k. [Appendix C to 40 CFR 122](#), revised as of July 1, 2020 (Criteria for Determining a Concentrated Aquatic Animal Production Facility); ()
- l. [Appendix D to 40 CFR 122](#), revised as of July 1, 2020 (NPDES Permit Application Testing Requirements); ()
- m. [Appendix J to 40 CFR 122](#), revised as of July 1, 2020 (NPDES Permit Testing Requirements for Publicly Owned Treatment Works); ()
- n. [40 CFR 125.1](#) through [40 CFR 125.3](#) (Subpart A), revised as of July 1, 2020 (Criteria and Standards for Imposing Technology-Based Treatment Requirements Under Sections 301(b) and 402 of the Clean Water Act); ()
- o. [40 CFR 125.10](#) through [40 CFR 125.11](#) (Subpart B), revised as of July 1, 2020 (Criteria for Issuance of Permits to Aquaculture Projects); ()
- p. [40 CFR 125.30](#) through [40 CFR 125.32](#) (Subpart D), revised as of July 1, 2020 (Criteria and Standards for Determining Fundamentally Different Factors Under Sections 301(b)(1)(A) and 301(b)(2)(A) and (E) of the Clean Water Act); ()
- q. [40 CFR 125.70](#) through [40 CFR 125.73](#) (Subpart H), revised as of July 1, 2020 (Criteria for Determining Alternative Effluent Limitations Under Section 316(a) of the Clean Water Act); ()
- r. [40 CFR 125.80](#) through [40 CFR 125.89](#) (Subpart I), revised as of July 1, 2020 (Requirements Applicable to Cooling Water Intake Structures for New Facilities Under Section 316(b) of the Clean Water Act); ()

s. 40 CFR 125.90 through 40 CFR 125.99 (Subpart J), revised as of July 1, 2020 (Requirements Applicable to Cooling Water Intake Structures for Phase II Existing Facilities Under Section 316(b) of the Clean Water Act); ()

t. 40 CFR 127.11 through 40 CFR 127.16 (Subpart B), revised as of July 1, 2020 (Electronic reporting of NPDES Information from NPDES-Regulated Facilities); ()

u. 40 CFR 129.1 through 40 CFR 129.105 (Subpart A), revised as of July 1, 2020 (Toxic Pollutant Effluent Standards and Prohibitions); ()

v. 40 CFR 133.100 through 40 CFR 133.105, revised as of July 1, 2020 (Secondary Treatment Regulation); ()

w. 40 CFR Part 136, revised as of July 1, 2020 (Guidelines Establishing Test Procedures for the Analysis of Pollutants, including Appendices A, B, C, and D); ()

x. 40 CFR Part 401, revised as of July 1, 2020 (General Provisions); ()

y. 40 CFR 403.1 through 40 CFR 403.3; 40 CFR 403.5 through 40 CFR 403.18, revised as of July 1, 2020 (General Pretreatment Regulations for Existing and New Sources of Pollution, including Appendices D, E, and G); ()

z. 40 CFR Part 405 through 40 CFR Part 471, revised as of July 1, 2020 (Effluent Limitations and Guidelines); and ()

aa. 40 CFR 503.2 through 40 CFR 503.48, revised as of July 1, 2020 (Sewage Sludge, including Appendices A and B). ()

bb. The term “Waters of the United States or waters of the U.S.,” as defined in 40 CFR 122.2, revised as of June 22, 2020, by 85 Federal Register 22250-22342 (April 21, 2020), unless said revision is stayed, overturned or invalidated by a court of law or withdrawn by EPA, in which case the Department incorporates by reference the term “Waters of the United States or waters of the U.S.” as defined in 40 CFR 122.2, revised as of December 23, 2019. ()

03. Term Interpretation. For the federal regulations incorporated by reference into these rules, unless the context in which a term is used clearly requires a different meaning, terms in this section have the following meanings: ()

a. The term Administrator or Regional Administrator means the EPA Region 10 Administrator; ()

b. The term Control Authority means the POTW for a facility with a Department-approved pretreatment program and the Department for a POTW without a Department-approved pretreatment program; ()

c. The term Director or State Director means the Director of the Department of Environmental Quality with an NPDES permit program approved pursuant to section 402(b) of the Clean Water Act; ()

d. The term National Pollutant Discharge Elimination System (NPDES) means the Idaho Pollutant Discharge Elimination System (IPDES); ()

e. The term Permitting Authority (also preceded by the terms NPDES or State) means the Idaho Department of Environmental Quality with an NPDES permit program approved pursuant to section 402(b) of the Clean Water Act. ()

004. ADMINISTRATIVE PROVISIONS.

Persons may be entitled to appeal final IPDES permit decisions pursuant to Section 204 (Appeals Process) of these

rules. ()

005. WRITTEN INTERPRETATIONS.

As described in Section 67-5201(19)(b)(iv), Idaho Code, the Department of Environmental Quality may have written statements which pertain to the interpretation of these rules. If available, such written statements can be inspected and copied at cost at the Department of Environmental Quality, 1410 N. Hilton, Boise, Idaho 83706-1255. ()

006. OFFICE HOURS -- MAILING ADDRESS AND STREET ADDRESS.

The state office of the Department of Environmental Quality is located at 1410 N. Hilton, Boise, Idaho 83706, (208) 373-0502, www.deq.idaho.gov. The office hours are 8 a.m. to 5 p.m. Monday through Friday. ()

007. -- 009. (RESERVED)

010. DEFINITIONS.

For the purpose of the rules contained in IDAPA 58.01.25, "Rules Regulating the Idaho Pollutant Discharge Elimination System Program," the following definitions apply. Terms not expressly defined in this section have the meaning provided by IDAPA 58.01.02, Section 010, "Water Quality Standards," or IDAPA 58.01.16, Section 010, "Wastewater Rules." ()

01. Animal Feeding Operation. A lot or facility (other than an aquatic animal production facility) where the following conditions are met: ()

a. Animals (other than aquatic animals) have been, are, or will be stabled or confined and fed or maintained for a total of forty-five (45) days or more in any twelve (12)-month period; and ()

b. Crops, vegetation, forage growth, or post-harvest residues are not sustained in the normal growing season over any portion of the lot or facility. ()

02. Applicable Standards and Limitations. All state, interstate, and federal standards and limitations to which a discharge, a sewage sludge use or disposal practice, or a related activity is subject under the Clean Water Act, including effluent limitations, water quality standards, standards of performance, toxic effluent standards or prohibitions, best management practices, pretreatment standards, and standards for sewage sludge use or disposal under the Clean Water Act sections 301, 302, 303, 304, 306, 307, 308, 402 and 405. ()

03. Application. The IPDES forms for applying for a permit or the EPA equivalent standard national forms when deemed acceptable by the Department, including any additions, revisions or modifications to the forms. ()

04. Approved Program or Approved State. A state or interstate program which has been approved or authorized by EPA under 40 CFR Part 123. ()

05. Aquaculture Project. A defined managed water area which uses discharges of pollutants into that designated area for the maintenance or production of harvestable freshwater, estuarine, or marine plants or animals. ()

06. Average Monthly Discharge Limitation. The highest allowable average of daily discharges over a calendar month, calculated as the sum of all daily discharges measured during a calendar month divided by the number of daily discharges measured during that month. ()

07. Average Weekly Discharge Limitation. The highest allowable average of daily discharges over a calendar week, calculated as the sum of all daily discharges measured during a calendar week divided by the number of daily discharges measured during that week. ()

08. Background. The biological, chemical or physical condition of waters measured at a point immediately upstream (up-gradient) of the influence of an individual point or nonpoint source discharge. If several discharges to the water exist or if an adequate upstream point of measurement is absent, the Department will determine where background conditions should be measured. ()

09. Best Management Practices (BMPs). Schedules of activities, prohibitions of practices, maintenance procedures, and other management practices to prevent or reduce the pollution of waters of the United States. BMPs also include treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage. ()

10. Biochemical Oxygen Demand (BOD). The measure of the amount of oxygen necessary to satisfy the biochemical oxidation requirements of organic materials at the time the sample is collected; unless otherwise specified, this term will mean the five (5) day BOD incubated at twenty (20) degrees C. ()

11. Biological Monitoring or Biomonitoring. The use of a biological entity as a detector and its response as a measure to determine environmental conditions. Toxicity tests and biological surveys, including habitat monitoring, are common biomonitoring methods. ()

12. Bypass. The intentional diversion of wastewater from any portion of a treatment facility. ()

13. Chemical Oxygen Demand (COD). A bulk parameter that measures the oxygen-consuming capacity of organic and inorganic matter present in water or wastewater. It is expressed as the amount of oxygen consumed from a chemical oxidant in a specific test. ()

14. Class I Sludge Management Facility. Any POTW identified under 40 CFR 403.8(a) as being required to have an approved pretreatment program (including such POTWs where the Department has elected to assume local program responsibilities pursuant to 40 CFR 403.10(e)) and any other treatment works treating domestic sewage (TWTDS) classified as a Class I sludge management facility by the Department, because of the potential for its sludge use or disposal practices to adversely affect public health and the environment. ()

15. Clean Water Act. Formerly referred to as the Federal Water Pollution Control Act or Federal Water Pollution Control Act Amendments of 1972. Public Law 92-500, as amended by Public Law 95-217, Public Law 95-576, Public Law 96-483 and Public Law 97-117, 33 U.S.C. 1251 et seq. ()

16. Clean Water Act and Regulations. The Clean Water Act and applicable regulations promulgated thereunder. In the case of an approved IPDES program, it includes Department program requirements. ()

17. Compliance Schedule or Schedule of Compliance. A schedule of remedial measures included in a permit, including an enforceable sequence of interim requirements (for example, actions, operations, or milestone events) leading to compliance with the Clean Water Act and these rules. ()

18. Concentrated Animal Feeding Operation (CAFO). Animal feeding operation that is defined as a Large CAFO in accordance with 40 CFR 122.23(b)(4), as a Medium CAFO in accordance with 40 CFR 122.23(b)(6), or that is designated as a CAFO in accordance with 40 CFR 122.23(c). Two (2) or more animal feeding operations under common ownership are considered to be a single animal feeding operation for the purposes of determining the number of animals at an operation, if they adjoin each other or if they use a common area or system for the disposal of wastes. ()

19. Concentrated Aquatic Animal Production (CAAP). A hatchery, fish farm, or other facility which meets the criteria in Appendix C of 40 CFR Part 122, or which the Department designates under 40 CFR 122.24(c). ()

20. Continuous Discharge. A discharge which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities. ()

21. Daily Discharge. The discharge of a pollutant measured during a calendar day or any twenty-four (24)-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in units of mass, the daily discharge is calculated as the total mass of the pollutant discharged over the day. For pollutants with limitations expressed in other units of measurement, the daily discharge is calculated as the average measurement of the pollutant over the day. ()

22. **Department.** The Idaho Department of Environmental Quality. ()
23. **Design Flow.** The average or maximum point source discharge volume per unit time that a facility or system is constructed to accommodate. ()
24. **Direct Discharge.** The discharge of a pollutant to waters of the United States. ()
25. **Director.** The Director of the Idaho Department of Environmental Quality or authorized agent. ()
26. **Discharge Monitoring Report (DMR).** The facility or activity report containing monitoring and discharge quality and quantity information and data required to be submitted periodically, as defined in the discharge permit. These reports must be submitted to the Department on a Department-approved format. ()
27. **Discharge.** When used without qualification means the discharge of a pollutant. ()
28. **Discharge of a Pollutant.** Any addition of any pollutant or combination of pollutants to waters of the United States from any point source. This definition includes additions of pollutants into waters of the United States from: surface runoff which is collected or channeled by man; discharges through pipes, sewers, or other conveyances owned by a state, municipality, or other person which do not lead to a treatment works; and discharges through pipes, sewers, or other conveyances, leading into privately owned treatment works. This term does not include an addition of pollutants by any indirect discharger. ()
29. **Draft Permit.** A document prepared under these rules indicating the Department’s tentative decision to issue or deny, modify, revoke and reissue, terminate, or reissue a permit. A notice of intent to terminate a permit, and a notice of intent to deny a permit, as discussed in Subsections 107.01 and 203.02, are types of draft permits. A denial of a request for modification, revocation and reissuance, or termination, as discussed in Subsection 201.01, is not a draft permit. A proposed permit is not a draft permit. ()
30. **Effluent.** Any discharge of treated or untreated pollutants into waters of the United States. ()
31. **Effluent Limitation.** Any restriction imposed by the Department on quantities, discharge rates, and concentrations of pollutants which are discharged from point sources into waters of the United States, in accordance with these rules and the Clean Water Act. ()
32. **Effluent Limitations Guidelines.** A regulation published by the EPA under the Clean Water Act section 304(b) to adopt or revise effluent limitations. ()
33. **Electronic Signature.** Information in digital form that is included in or associated with an electronic document for the purpose of expressing the same meaning and intention as would a handwritten signature. ()
34. **Environmental Protection Agency (EPA).** The United States Environmental Protection Agency. ()
35. **Equivalent Dwelling Unit (EDU).** A measure where one (1) EDU is equivalent to wastewater generated from one (1) single-family residence. For the purposes of assessing fees associated with publicly or privately owned domestic sewage treatment, the number of EDUs is calculated as the population served divided by the average household size as defined in the most recent Census Bureau data (for that municipality, county, or average number of persons per household for the state of Idaho). For fees associated with industrial wastewater treatment owned by a municipality, EDUs are calculated in accordance with the definition of EDU in IDAPA 58.01.16, Section 010, “Wastewater Rules.” ()
36. **Existing Source.** Any source which is not a new source or a new discharger. ()
37. **Facilities or Equipment.** Buildings, structures, process or production equipment or machinery

which form a permanent part of the new source and which will be used in its operation, if these facilities or equipment are of such value as to represent a substantial commitment to construct. It excludes facilities or equipment used in connection with feasibility, engineering, and design studies regarding the source or water pollution treatment for the source. ()

38. Facility or Activity. Any point source or any other facility or activity (including land or appurtenances thereto) that is subject to regulation under the IPDES program. ()

39. Fundamentally Different Factors. The factors relating to a discharger's facilities, equipment, processes or other factors related to the discharger are fundamentally different from the factors considered by EPA in development of the national effluent limits. ()

40. General Permit. An IPDES permit issued under Section 130 (General Permits) authorizing a category of discharges within a geographical area. ()

41. Hazardous Substance. Any substance designated under 40 CFR Part 116 pursuant to the Clean Water Act section 311. ()

42. Idaho Pollutant Discharge Elimination System (IPDES). Idaho's program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under these rules and the Clean Water Act sections 307, 402, 318, and 405. ()

43. Indian Country. ()

a. All land within the limits of any Indian reservation under the jurisdiction of the United States Government, notwithstanding the issuance of any patent, and, including rights-of-way running through the reservation; ()

b. All dependent Indian communities within the borders of the United States, whether within the originally or subsequently acquired territory thereof, and whether within or without the limits of the state; and ()

c. All Indian allotments, the Indian titles to which have not been extinguished including rights-of-way running through the same. ()

44. Indian Tribe. Any Indian tribe, band, group, or community recognized by the Secretary of the Interior and exercising governmental authority over a federal Indian reservation. ()

45. Indirect Discharger. A nondomestic discharger introducing pollutants to a privately or publicly owned treatment works. ()

46. Industrial Wastewater. Any waste, together with such water as is present that is the by-product of industrial processes including, but not limited to, food processing or food washing wastewater (see Process Wastewater). ()

47. Infiltration. Water other than wastewater that enters a sewer system (including sewer service connections and foundation drains) from the ground through such means as defective pipes, pipe joints, connections, or manholes. Infiltration does not include, and is distinguished from, inflow. ()

48. Inflow. Water other than wastewater that enters a sewer system (including sewer service connections) from sources such as, but not limited to, roof leaders, cellar drains, yard drains, area drains, drains from springs and swampy areas, manhole covers, cross connections between storm sewers and sanitary sewers, catch basins, cooling towers, storm waters, surface runoff, street wash waters, or drainage. Inflow does not include, and is distinguished from, infiltration. ()

49. Interstate Agency. An agency of two (2) or more states established by or under an agreement or compact, or any other agency of two (2) or more states having substantial powers or duties pertaining to the control of

pollution. ()

50. Load Allocation (LA). The portion of a receiving water body's loading capacity that is attributed either to one (1) of its existing or future nonpoint sources of pollution or to natural background sources. ()

51. Major Facility. A facility or activity that is: ()

a. A publicly or privately owned treatment works with a design flow equal to or greater than one million gallons per day (1 MGD), or serves a population of ten thousand (10,000) or more, or causes significant water quality impacts; or ()

b. A non-municipal facility that equals or exceeds the eighty (80) point accumulation as described in the Score Summary of the NPDES Non-Municipal Permit Rating Work Sheet (June 27, 1990) or the Department equivalent guidance document. ()

52. Maximum Daily Discharge Limitation. The highest allowable daily discharge. ()

53. Maximum Daily Flow. The largest volume of flow to be discharged during a continuous twenty-four-hour period expressed as a volume per unit time. ()

54. Mixing Zone. A defined area or volume of the receiving water surrounding or adjacent to a wastewater discharge where the receiving water, as a result of the discharge, may not meet all applicable water quality criteria or standards. It is considered a place where wastewater mixes with receiving water and not as a place where effluents are treated. ()

55. Municipality. A city, town, county, district, association, or other public body created by or under state law and having jurisdiction over disposal of sewage, industrial wastes, or other wastes, or an Indian tribe or an authorized Indian tribal organization, or a designated and approved management agency under the Clean Water Act section 208. ()

56. National Pollutant Discharge Elimination System (NPDES). The national program for issuing, modifying, revoking and reissuing, terminating, monitoring and enforcing permits, and imposing and enforcing pretreatment requirements, under the Clean Water Act sections 307, 402, 318, and 405. ()

57. New Discharger. Any building, structure, facility, or installation: ()

a. From which there is or may be a discharge of pollutants; ()

b. That did not commence the discharge of pollutants at a particular site prior to August 13, 1979; ()

c. Which is not a new source; and ()

d. Which has never received a finally effective NPDES or IPDES permit for discharges at that site. ()

e. This definition includes an indirect discharger which commences discharging into waters of the United States after August 13, 1979. It also includes any existing mobile point source such as an aggregate plant, that begins discharging at a site for which it does not have a permit; ()

58. New Source. Any building, structure, facility, or installation from which there is or may be a discharge of pollutants, the construction of which commenced: ()

a. After promulgation of standards of performance under the Clean Water Act section 306 which are applicable to such source; or ()

b. After proposal of standards of performance in accordance with the Clean Water Act section 306

which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within one hundred twenty (120) days of their proposal. ()

59. Notice of Intent to Deny. A type of draft permit that shall convey to a permit applicant or permittee, the Department's intent to not issue or renew an IPDES permit. ()

60. Notice of Intent to Obtain Coverage under an IPDES General Permit. An applicant seeking discharge coverage under an IPDES general permit shall submit a notice of intent to obtain coverage for discharges to waters of the United States under general permit classifications, including, but not limited to: ()

- a. Storm Water Construction General Permit (CGP); ()
- b. Multi-Sector General Permit (MSGP) for Industrial Storm Water Requirements; ()
- c. Municipal Separate Storm Sewer System (MS4) General Permit; ()
- d. Concentrated Animal Feeding Operation (CAFO) General Permit; ()
- e. Concentrated Aquatic Animal Production (CAAP) Facility General Permit; ()
- f. Ground Water Remediation General Permit; ()
- g. Suction Dredge General Permit; or ()
- h. Pesticide General Permit (PGP). ()

61. Notice of Intent to Terminate. A notice of intent to terminate shall: ()

- a. Convey to a permittee the Department's intent to terminate an existing IPDES permit for cause; or ()
- b. Convey to the Department a permittee's intent to terminate coverage for an activity under an Individual or General Permit. A construction general permit holder is obligated to submit a notice of intent to terminate upon completion of construction activities and, in the case of storm water control, that final stabilization has been achieved. ()

62. Owner or Operator. The person, company, corporation, district, association, or other organizational entity that is an owner or operator of any facility or activity subject to regulation under the IPDES program. ()

63. Pesticide Discharges. The discharges that result from the application of biological pesticides, and the application of chemical pesticides that leave a residue, from point sources to waters of the United States. In the context of this definition of pesticide discharges, this does not include agricultural storm water discharges and return flows from irrigated agriculture, which are excluded by law (33 U.S.C. 1342(l); 33 U.S.C. 1362(14)). ()

64. Pesticide Residue. For the purpose of determining whether an IPDES permit is needed for discharges to waters of the United States from pesticide application, means that portion of a pesticide application that is discharged from a point source to waters of the United States and no longer provides pesticidal benefits. It also includes any degradates of the pesticide. ()

65. Permit. The authorization, license, or equivalent control document issued by the Department to implement the requirements of these rules. This does not include any permit which has not yet been the subject of final Department action, such as a draft permit or a proposed permit. ()

66. Person. An individual, public or private corporation, partnership, association, firm, joint stock company, joint venture, trust, estate, state, municipality, commission, political subdivision of the state, state or federal agency, department or instrumentality, special district, interstate body or any legal entity, or an agent or employee

thereof, which is recognized by law as the subject of rights and duties. ()

67. Point Source. Any discernible, confined, and discrete conveyance, including but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, landfill leachate collection system, vessel or other floating craft from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural storm water runoff. ()

68. Pollutant. Dredged spoil, solid waste, incinerator residue, filter backwash, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials (except those regulated under the Atomic Energy Act of 1954, as amended (42 U.S.C. 2011 et seq.)), heat, wrecked or discarded equipment, rock, sand, cellar dirt and industrial, municipal, and agricultural waste discharged into water. It does not mean: ()

a. Sewage from vessels; or ()

b. Water, gas, or other material which is injected into a well to facilitate production of oil or gas, or water derived in association with oil and gas production and disposed of in a well, if the well used either to facilitate production or for disposal purposes is approved by authority of the state in which the well is located, and if the state determines that the injection or disposal will not result in the degradation of ground or surface water resources. NOTE: Radioactive materials covered by the Atomic Energy Act are those encompassed in its definition of source, byproduct, or special nuclear materials. Examples of materials not covered include radium and accelerator-produced isotopes. See *Train v. Colorado Public Interest Research Group, Inc.*, 426 U.S. 1 (1976). ()

69. Potable Water. Water which is free from impurities in such amounts that it is safe for human consumption without treatment. ()

70. Pretreatment. The reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a POTW. The reduction or alteration may be obtained by physical, chemical or biological processes, process changes or by other means, except as prohibited by 40 CFR 403.6(d). Appropriate pretreatment technology includes control equipment, such as equalization tanks or facilities, for protection against surges or slug loadings that might interfere with or otherwise be incompatible with the POTW. However, where wastewater from a regulated process is mixed in an equalization facility with unregulated wastewater or with wastewater from another regulated process, the effluent from the equalization facility must meet an adjusted pretreatment limit calculated in accordance with 40 CFR 403.6(e). ()

71. Primary Industry Category. Any industry category listed in Appendix A of 40 CFR Part 122. ()

72. Privately Owned Treatment Works. Any device or system which is used to treat wastes and is not a Publicly Owned Treatment Works (POTW). ()

73. Process Wastewater. Any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, byproduct, or waste product (see Industrial Wastewater definition). ()

74. Proposed Permit. An IPDES permit prepared after the close of the public comment period (and, when applicable, any public meeting and administrative appeals) which is sent to EPA for review before final issuance by the Department. A proposed permit is not a draft permit. ()

75. Proposed Settlement of a State Enforcement Action. A Department consent order or compliance agreement schedule issued in response to a notice of violation that is to be signed by the Director. This does not include amendments or extensions of consent orders or compliance agreement schedules. ()

76. Publicly Owned Treatment Works (POTW). A treatment works as defined by the Clean Water Act section 212, which is owned by a state or municipality, as defined by the Clean Water Act section 502(4). This definition includes any devices and systems used in the storage, treatment, recycling and reclamation of municipal

sewage or industrial wastes of a liquid nature. It also includes sewers, pipes and other conveyances only if they convey wastewater to a POTW treatment plant. The term also means the municipality as defined in the Clean Water Act section 502(4), which has jurisdiction over the indirect discharges to and the discharges from such a treatment works. ()

77. **Receiving Waters.** Those waters of the United States to which there is a discharge of pollutants. ()
78. **Recommencing Discharger.** A source which renews discharges after terminating operations. ()
79. **Regional Administrator.** The Region 10 Administrator of the Environmental Protection Agency or the authorized representative of the Regional Administrator. ()
80. **Secondary Industry Category.** Any industry category which is not a primary industry category. ()
81. **Secondary Treatment.** Technology-based requirements for direct discharging POTWs, based on the expected performance of a combination of physical and biological processes typical for the treatment of pollutants in municipal sewage. Standards are expressed as a minimum level of effluent quality in terms of: BOD5, total suspended solids (TSS), and pH (except as provided by treatment equivalent to secondary treatment and other special considerations). ()
82. **Secretary.** The Secretary of the Army, acting through the Chief of Engineers. ()
83. **Septage.** The liquid and solid material pumped from a septic tank, cesspool, or similar domestic sewage treatment system, or a holding tank when the system is cleaned or maintained. ()
84. **Severe Property Damage.** Substantial physical damage to property, damage to the treatment facilities which causes them to become inoperable, or substantial and permanent loss of natural resources which can reasonably be expected to occur in the absence of a bypass. Severe property damage does not mean economic loss caused by delays in production. ()
85. **Sewage.** The water-carried human or animal waste from residences, buildings, industrial establishments or other places, together with such ground water infiltration and surface water as may be present. ()
86. **Sewage from Vessels.** Human body wastes and the wastes from toilets and other receptacles intended to receive or retain body wastes that are discharged from vessels and regulated under the Clean Water Act section 312. ()
87. **Sewage Sludge.** Any solid, semi-solid, or liquid residue removed during the treatment of municipal wastewater or domestic sewage. Sewage sludge includes, but is not limited to, solids removed during primary, secondary, or advanced wastewater treatment, scum, septage, portable toilet pumpings, type III marine sanitation device pumpings (33 CFR Part 159), and sewage sludge products. Sewage sludge does not include grit or screenings, or ash generated during the incineration of sewage sludge. ()
88. **Sewage Sludge Use or Disposal Practice.** The collection, storage, treatment, transportation, processing, monitoring, use, or disposal of sewage sludge. ()
89. **Significant Industrial User.** ()
- a. All industrial users subject to Categorical Pretreatment Standards under 40 CFR 403.6 and 40 CFR Parts 400 through 471; and ()
- b. Any other industrial user that: ()

i. Discharges an average of twenty-five thousand (25,000) gallons per day or more of process wastewater to the POTW (excluding sanitary, noncontact cooling and boiler blowdown wastewater); ()

ii. Contributes a process waste stream which makes up five percent (5%) or more of the average dry weather hydraulic or organic capacity of the POTW treatment plant; or ()

iii. Is designated as such by the Control Authority on the basis that the industrial user has a reasonable potential for adversely affecting the POTW's operation or for violating any Pretreatment Standard or requirement (in accordance with 40 CFR 403.8(f)(6)). ()

90. Silvicultural Point Source. Any discernible, confined, and discrete conveyance related to rock crushing, gravel washing, log sorting, or log storage facilities which are operated in connection with silvicultural activities and from which pollutants are discharged into waters of the United States. The term does not include non-point source silvicultural activities such as nursery operations, site preparation, reforestation and subsequent cultural treatment, thinning, prescribed burning, pest and fire control, harvesting operations, surface drainage, or road construction and maintenance from which there is natural runoff. However, some of these activities (such as stream crossing for roads) may involve point source discharges of dredged or fill material which may require a Clean Water Act section 404 permit. ()

91. Site. The land or water area where any facility or activity is physically located or conducted, including adjacent land used in connection with the facility or activity. ()

92. Sludge. The semi-liquid mass produced and removed by the wastewater treatment process. ()

93. Sludge-Only Facility. Any TWTDS whose methods of sewage sludge use or disposal are subject to regulations promulgated pursuant to the Clean Water Act section 405(d) and is required to obtain an IPDES permit. ()

94. Source. Any building, structure, facility, or installation from which there is or may be discharge of pollutants. ()

95. Standards for Sewage Sludge Use or Disposal. Regulations promulgated pursuant to the Clean Water Act section 405(d) and these rules which govern minimum requirements for sewage sludge quality, management practices, and monitoring and reporting applicable to sewage sludge or the use or disposal of sewage sludge by any person. ()

96. State. The state of Idaho. ()

97. State/EPA Agreement. An agreement between the EPA Regional Administrator and the state of Idaho which coordinates EPA and Department activities, responsibilities and programs including those under the Clean Water Act programs. ()

98. Storm Water. Storm water runoff, snow melt runoff, and surface runoff and drainage. ()

99. Technology-Based Effluent Limitation (TBEL). Treatment requirements under the Clean Water Act that represent the minimum level of control that must be imposed in a permit issued under section 402 of the Clean Water Act. ()

100. Total Dissolved Solids. The total dissolved (filterable) solids as determined by use of the method specified in 40 CFR Part 136. ()

101. Toxic Pollutant. Any substance, material or disease-causing agent, or a combination thereof, which after discharge to waters of the United States and upon exposure, ingestion, inhalation, or assimilation into any organism (including humans), either directly from the environment or indirectly by ingestion through food chains, will cause death, disease, behavioral abnormalities, malignancy, genetic mutation, physiological abnormalities (including malfunctions in reproduction) or physical deformations in affected organisms or their offspring. Toxic pollutants include, but are not limited to, the one hundred twenty-six (126) priority pollutants identified by EPA

pursuant to the Clean Water Act section 307(a), or in the case of sewage sludge use or disposal practices, any pollutant identified in regulations implementing the Clean Water Act section 405(d). ()

102. Treatment. A process or activity conducted for the purpose of removing pollutants from wastewater. ()

103. Treatment Facility. Any physical facility or land area for the purpose of collecting, treating, neutralizing, or stabilizing pollutants including treatment plants; the necessary collecting, intercepting, outfall and outlet sewers; pumping stations integral to such plants or sewers; disposal or reuse facilities; equipment and furnishing thereof; and their appurtenances. For the purpose of these rules, a treatment facility may also be known as a treatment system, a wastewater system, wastewater treatment system, wastewater treatment facility, wastewater treatment plant, or privately or publicly owned treatment works. ()

104. Treatment Works Treating Domestic Sewage (TWTDS). A POTW or any other sewage sludge or waste water treatment devices or systems, regardless of ownership (including federal facilities), used in the storage, treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated for the disposal of sewage sludge. This definition does not include septic tanks or similar devices. For purposes of this definition, domestic sewage includes waste and waste water from humans or household operations that are discharged to or otherwise enter a treatment works. ()

105. Upset. An exceptional incident in which there is unintentional and temporary noncompliance with technology-based permit effluent limitations because of factors beyond the reasonable control of the permittee. An upset does not include noncompliance to the extent caused by operational error, improperly designed treatment facilities, inadequate treatment facilities, lack of preventive maintenance, or careless or improper operation. ()

106. User. Any person served by a wastewater system. ()

107. Variance. Any mechanism or provision under the Clean Water Act section 301 or 316 or under 40 CFR Part 125, or in the applicable effluent limitations guidelines allowing modification to or waiver of the generally applicable effluent limitation requirements or time deadlines of the Clean Water Act. This includes provisions which allow the establishment of alternative limitations based on fundamentally different factors or on Clean Water Act sections 301(c), 301(g), 301(h), 301(i), or 316(a). ()

108. Wasteload Allocation (WLA). The portion of a receiving water's loading capacity that is allocated to one (1) of its existing or future point sources of pollution. ()

109. Wastewater. Any combination of liquid or water and pollutants from activities and processes occurring in dwellings, commercial buildings, industrial plants, institutions and other establishments, together with any ground water, surface water, and storm water that may be present; liquid or water that is chemically, biologically, physically or rationally identifiable as containing blackwater, gray water or commercial or industrial pollutants; and sewage. ()

110. Water Pollution. Any alteration of the physical, thermal, chemical, biological, or radioactive properties of any waters of the United States, or the discharge of any pollutant into the waters of the United States, which will or is likely to create a nuisance or to render such waters harmful, detrimental or injurious to public health, safety or welfare, or to fish and wildlife, or to domestic, commercial, industrial, recreational, aesthetic, or other beneficial uses. ()

111. Water Quality-Based Effluent Limitation (WQBEL). An effluent limitation determined by selecting the most stringent of the effluent limits calculated using all applicable water quality criteria (e.g., aquatic life, human health, wildlife, translation of narrative criteria) for a specific point source to a specific receiving water. ()

112. Water Transfer. An activity that conveys or connects waters of the United States without subjecting the transferred water to intervening industrial, municipal, or commercial use. ()

113. Wetlands. Areas inundated or saturated by surface or ground water at a frequency and duration

sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas. ()

114. Whole Effluent Toxicity. The aggregate toxic effect of an effluent measured directly by a toxicity test. ()

011. -- 049. (RESERVED)

050. COMPUTATION OF TIME.

01. Computing Time. In computing any period of time scheduled to begin after or before the occurrence of an act or event, the date of the act or event is not included. The last day of the period is included, unless it is a Saturday, a Sunday, or a legal holiday, in which case the period runs until the end of the next day which is neither a Saturday, a Sunday, nor holiday. The section does not apply to submission deadlines for twenty-four (24) hour reporting, permit applications, or notices of intent for coverage under a general permit ()

02. Notice by Mail. Whenever a party or interested person has the right or is required to act within a prescribed period after the service of notice or other paper and the notice or paper is served upon him or her by mail, three (3) days will be added to the prescribed time. ()

051. -- 089. (RESERVED)

090. SIGNATURE REQUIREMENTS.

01. Permit Applications and Notices of Intent. All IPDES permit applications and notices of intent must be signed by a certifying official as follows: ()

a. For a corporation, a responsible corporate officer shall sign the application or notice of intent. In this subsection, a responsible corporate officer means: ()

i. A president, secretary, treasurer, or vice-president of the corporation in charge of a principal business function, or any other person who performs similar policy- or decision-making functions for the corporation; or ()

ii. The manager of one (1) or more manufacturing, production, or operating facilities, if: ()

(1) The manager is authorized to make management decisions that govern the operation of the regulated facility, including having the explicit or implicit duty of making major capital investment recommendations, and initiating and directing other comprehensive measures to assure long-term environmental compliance with environmental statutes and regulations; ()

(2) The manager can ensure that the necessary systems are established or actions taken to gather complete and accurate information for IPDES permit application requirements; and ()

(3) Authority to sign documents has been assigned or delegated to the manager in accordance with corporate procedures; ()

b. For a partnership or sole proprietorship, the general partner or the proprietor, respectively, shall sign the application; and ()

c. For a municipality, state, or other public agency, either a principal executive officer or ranking elected official shall sign the application. In this subsection, a principal executive officer of an agency means: ()

i. The chief executive officer of the agency; or ()

ii. A senior executive officer having responsibility for the overall operations of a principal geographic ()

unit or division of the agency. ()

02. Reports and Other Information Submitted. Any report or information required by an IPDES permit, notice of intent, monitoring and reporting provisions, and any other information requested by the Department, must be signed by a person described in Subsection 090.01, or by a duly authorized representative of that person. A person is a duly authorized representative only if: ()

a. The authorization is made in writing by a person described in Subsection 090.01; ()

b. The authorization specifies either: ()

i. An individual or a position having responsibility for the overall operation of the regulated facility or activity, including the position of manager, operator, superintendent or position of equivalent responsibility; or ()

ii. An individual or position having overall responsibility for environmental matters for the company; and ()

c. The written authorization is submitted to the Department. ()

03. New Authorization. If an authorization is no longer accurate due to a change in staffing or personnel for the overall operation of the facility, a new authorization satisfying the requirements of Subsection 090.01 must be submitted to the Department before or together with any report, information, or application to be signed by an authorized representative. ()

04. Certification. Any person signing a document under Subsections 090.01 or 090.02 shall certify as follows: “I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.” ()

05. Electronic Signatures. The Department may require any signed, certified, or authorized information required under these rules to be submitted electronically, with an electronic signature approved by the Department. ()

06. Electronic Reporting. When documents described in Subsection 090.01 or 090.02 of this rule are submitted electronically by or on behalf of the IPDES-regulated facility, any person providing the electronic signature for such documents shall meet all relevant requirements of this section, and shall ensure that all of the relevant requirements of 40 CFR Part 3 (Cross-Media Electronic Reporting) and 40 CFR Part 127 (NPDES Electronic Reporting Requirements) are met for that submission. ()

091. -- 099. (RESERVED)

100. EFFECT OF A PERMIT.

01. Rights. The issuance of, or coverage under, an IPDES permit does not convey any property rights or any exclusive privilege nor does it authorize any injury to persons or property or invasion of other private rights, or any infringement of state or local law or regulations. The issuance of, or coverage under, an IPDES permit does not constitute authorization of the permitted activities by any other state or federal agency or private person or entity, and does not excuse the permit holder from the obligation to obtain any other necessary approvals, authorizations, or permits. ()

02. Compliance. Except for any toxic effluent standards and prohibitions imposed under the Clean Water Act section 307, and standards for sewage sludge use or disposal under the Clean Water Act section 405(d),

compliance with an IPDES permit during its term constitutes compliance, for purposes of enforcement, with Clean Water Act sections 301, 302, 306, 307, 318, 403, and 405(a) through (b). However, a permit or coverage under a permit may be modified, revoked and reissued, or terminated during its term for cause as set out in Sections 130 (General Permits), 201 (Modification, or Revocation and Reissuance of IPDES Permits), and 203 (Termination of IPDES Permits). ()

101. DURATION.

01. Permit Term. IPDES permits shall be issued for a fixed duration not to exceed five (5) years. ()

a. The Department may issue a permit for a period of less than five (5) years. An explanation of the reasoning behind issuing a permit for a shorter period shall be provided in the fact sheet. ()

b. The duration of a permit may not be modified to lengthen the effective term of the permit past the maximum five (5) year duration. ()

c. A permit may be issued to expire on or after the statutory deadline set forth in the Clean Water Act sections 301(b)(2)(A), (C), and (E), if the permit includes effluent limitations to meet the requirements of the Clean Water Act sections 301(b)(2)(A), (C), (D), (E) and (F), whether or not applicable effluent limitations guidelines have been promulgated or approved. ()

d. A determination that a particular discharger falls within a given industrial category for purposes of setting a permit expiration date under Subsection 101.01.c. is not conclusive as to the discharger's inclusion in that industrial category for any other purposes, and does not prejudice any rights to challenge or change that inclusion at the time that a permit based on that determination is formulated. ()

e. A federally-issued NPDES permit, the administration of which has been transferred to the Department upon or after EPA approval of the IPDES program, shall continue in effect and be enforceable by the Department, subject to Subsections 101.02 and 101.03. ()

02. Continuation of Individual Permits. The conditions of an expired individual permit, whether a federal NPDES permit (except for permits over which EPA retains authority) or a state-issued IPDES permit, will remain fully effective and enforceable until the effective date of a new permit or the date of the Department's final decision to deny the application for the new permit, if: ()

a. The permittee has submitted a timely and complete application for a new permit under Section 105 (Application for an Individual IPDES Permit); and ()

b. The Department, because of time, resource, or other constraints, but through no fault of the permittee, does not issue a new permit with an effective date on or before the expiration date of the previous permit. ()

03. Continuation of General Permits. The conditions of an expired general permit, whether a federal NPDES permit or a state-issued IPDES permit, will remain fully effective and enforceable (except for permits over which EPA retains authority) until the date the authorization to discharge under the new permit is determined, if: ()

a. The permittee has submitted a timely notice of intent to obtain coverage under the new general permit as specified in Section 130 (General Permits); and ()

b. The Department, because of time, resource, or other constraints, but through no fault of the permittee, does not issue a new general permit with an effective date on or before the expiration date of the previous permit. ()

04. Continuation of Permits During an Appeal. Whether the conditions of an expired permit remain effective and enforceable during an appeal of a new permit, or an appeal of the denial of a permit application, is

governed by Section 204 (Appeals Process). ()

102. OBLIGATION TO OBTAIN AN IPDES PERMIT.

01. Persons Who Must Obtain a Permit. Any person who discharges or proposes to discharge a pollutant from any point source into waters of the United States, or who owns or operates a sludge-only facility whose sewage sludge use or disposal practice is regulated by 40 CFR Part 503 or these rules, and who does not have an IPDES or NPDES permit in effect, shall submit a complete IPDES permit application to the Department, unless the discharge, proposed discharge, or TWTDS: ()

a. Is covered by one (1) or more general permits in compliance with Section 130 (General Permits). Any applicant must complete a notice of intent for any discharge or proposed discharge that is covered by one (1) or more general permits; ()

b. Is excluded from IPDES permit requirements under Subsection 102.05; ()

c. Is by a user to a privately owned treatment works, and the Department, under Section 370 (Pretreatment Standards), does not otherwise require the person to apply for a permit; or ()

d. Is a TWTDS facility that uses or disposes of sewage sludge to which a standard applicable to its sewage sludge use or disposal practices have not been published. Such facilities shall submit limited background information, as specified in Subsection 105.17.o., within one (1) year after publication of applicable standards. ()

02. Operator's Duty to Obtain a Permit. When a facility or activity is owned by one person but is operated by another person, it is the operator's duty to obtain a permit. ()

03. Permits Under the Clean Water Act Section 405(f). All new and currently permitted TWTDS whose sewage sludge use or disposal practices are regulated by 40 CFR Part 503 must submit permit applications according to the applicable schedule in Subsection 105.17. The Department may require permit applications from any TWTDS at any time if the Department determines that a permit is necessary to protect public health and the environment from any potential adverse effects that may occur from toxic pollutants in sewage sludge. ()

04. Designation of Small Municipal Separate Storm Sewer Systems (MS4s). DEQ shall designate a small MS4 that is not located in an urbanized area, as determined by the latest Decennial Census by the Bureau of Census, as a regulated small MS4 that must be covered by an IPDES permit if the Department determines that: ()

a. The storm water discharge results in or has the potential to result in exceedance of water quality standards or other significant water quality impacts; or ()

b. The storm water discharge contributes substantially to the pollutant loadings of a physically interconnected municipal separate storm sewer that is regulated by the IPDES storm water program. ()

05. Exclusions from Permit. A person shall not discharge pollutants from any point source into waters of the United States without first obtaining an IPDES permit from the Department or coverage under an IPDES general permit, unless the discharge is excluded from IPDES permit requirements or the discharge is authorized by an IPDES or NPDES permit that continues in effect. The Department will not require persons to obtain IPDES permits for facilities or activities that are not required to obtain NPDES permits from EPA under the Clean Water Act and federal Clean Water Act regulations. Discharges excluded from IPDES permit requirements, but that may be regulated by other state or federal regulations include: ()

a. Any sewage discharge from vessels and any effluent from properly functioning marine engines, laundry, shower and galley sink wastes, or any other discharge incidental to the normal operation of a vessel of the U.S. Armed Forces within the meaning of the Clean Water Act section 312, and a recreational vessel within the meaning of the Clean Water Act section 502(25). None of these exclusions apply to: ()

- i. Rubbish, trash, garbage, or other such materials discharged overboard; nor to ()
- ii. Other discharges when the vessel is operating in a capacity other than as a means of transportation such as when used as: ()
 - (1) An energy or mining facility; ()
 - (2) A storage facility, or when secured to a storage facility; or ()
 - (3) When secured to the bed of the waters of the United States for the purposes of mineral or oil exploration or development; ()
- b. Any discharge of dredged or fill material into waters of the United States that is regulated under the Clean Water Act section 404; ()
- c. Sewage, industrial wastes, or other pollutants discharged into publicly owned treatment works (POTWs) by an indirect discharger who has received a will-serve letter authorizing the discharge to the POTW. Plans or agreements to switch to this method of disposal in the future do not relieve dischargers of the obligation to have and comply with permits until all discharges of pollutants to waters of the United States are eliminated. This exclusion does not apply to the introduction of pollutants to privately owned treatment works or to other discharges through pipes, sewers, or other conveyances owned by a state, municipality, or other party not leading to treatment works; ()
- d. Any discharge in compliance with the instructions of an on-scene coordinator under 40 CFR Part 300 (The National Oil and Hazardous Substances Pollution Contingency Plan), or 33 CFR 153.10(e) (Control of Pollution by Oil and Hazardous Substances, Discharge Removal); ()
- e. Any introduction of pollutants from non-point source agricultural and silvicultural activities, including storm water runoff from orchards, cultivated crops, pastures, range lands, and forest lands; however, this exclusion does not apply to discharges from concentrated animal feeding operations (CAFO) as defined in 40 CFR 122.23, discharges from concentrated aquatic animal production (CAAP) facilities, discharges to aquaculture projects, and discharges from silvicultural point sources; ()
- f. Any return flow from irrigated agriculture; ()
- g. Discharges into a privately owned treatment works, except as the Department may otherwise require under Subsection 302.15; and ()
- h. Discharges from a water transfer. This exclusion does not apply to pollutants introduced by the water transfer activity itself to the water being transferred. ()

103. PERMIT PROHIBITIONS.

The Department will not issue an IPDES permit for a discharge: ()

01. Clean Water Act Compliance. Unless the conditions of the permit provide for compliance with the applicable requirements of IDAPA 58.01.02, “Water Quality Standards” and 58.01.25 “Rules Regulating the Idaho Pollutant Discharge Elimination System Program”; ()

02. EPA Objection. When the Department has received written objection pursuant to 40 CFR 123.44 from the EPA Regional Administrator to issuance of the permit and until the objections are resolved according to the process identified in the Memorandum of Agreement between EPA and the Department; ()

03. Water Quality Requirements. When the imposition of conditions cannot ensure compliance with the applicable water quality requirements of all affected states; ()

04. Anchorage and Navigation Impaired. When, in the judgment of the Secretary of the United States Army through the Army Corp Chief of Engineers, anchorage and navigation in or on any of the waters of the

United States would be substantially impaired by the discharge; ()

05. Banned Content. Of any radiological, chemical, or biological warfare agent or high level radioactive waste; ()

06. Area Wide Waste Treatment Management Plans. That is inconsistent with a plan or plan amendment approved under the Clean Water Act section 208(b); or ()

07. New Sources or New Dischargers. For a new source or new discharger, if the discharge from its construction or operation will cause or contribute to the violation of water quality standards. ()

a. When the owner or operator of a new source or new discharge proposes to discharge into a water segment that does not meet applicable water quality standards, or that is not expected to meet those standards even after the application of the effluent limitations required by Clean Water Act sections 301(b)(1)(A) and (B), and for which the state or interstate agency has performed a pollutant load allocation for the pollutant to be discharged, then the owner or operator must demonstrate that: ()

i. There are sufficient remaining pollutant load allocations to allow for the discharge; and ()

ii. The existing dischargers into that segment are subject to compliance schedules designed to bring the segment into compliance with applicable water quality standards. ()

b. The Department may waive the submission of the information by the permit applicant required in Subsection 103.07.a. if the Department determines that it already has adequate information to evaluate the request. ()

c. An explanation of the development of limitations to meet the criteria of this section is to be included in the fact sheet to the permit. ()

104. PRE-APPLICATION PROCESS.

Any person who intends to apply for a permit or who proposes to discharge a pollutant into the waters of the United States should contact the Department to schedule a meeting prior to submitting an application to discuss: ()

01. IPDES Permit Applicability. Whether the actions or facility will require an IPDES permit, and whether other suitable permitting options are available; ()

02. Application Content. The IPDES permit application requirements; and ()

03. Application Schedule. The IPDES permit application submittal schedule. ()

105. APPLICATION FOR AN INDIVIDUAL IPDES PERMIT.

01. Electronic Submittals. The Department may require an applicant to electronically submit information required by this section, if the Department approves an electronic method of submittal. ()

02. Application Retention Schedule. An applicant must keep records of all data used to complete a permit application and any supplemental information submitted for a period of at least three (3) years from the date the application is signed. ()

03. Time to Apply. Any person required under Subsections 102.01 through 102.03 to obtain an IPDES permit must submit to the Department a complete application for a permit in compliance with the requirements of this subsection. A permit application must be signed and certified as required by Section 090 (Signature Requirements). ()

a. A person proposing a new discharge must submit an application at least one hundred eighty (180) days before the date on which the discharge is to commence, unless the Department has granted permission to submit the application on a later date as specified in Subsections 105.03.e. and f. A facility proposing a new discharge of storm water associated with industrial activity must submit an application one hundred eighty (180) days before that

facility commences industrial activity that may result in a discharge of storm water associated with that industrial activity, unless the Department has granted permission to submit the application on a later date as specified in Subsections 105.03.e. and f. ()

b. Facilities described under 40 CFR 122.26(b)(14)(x) or (b)(15)(i) must submit an application at least ninety (90) days before the date on which construction is to commence unless otherwise required by the terms of an applicable general permit. ()

c. Any TWTDS that commences operations after promulgation of any applicable “standard for sewage sludge use or disposal” must submit an application to the Department at least one hundred eighty (180) days prior to the date proposed for commencing operations. ()

d. A person discharging from a permitted facility with a currently effective permit must submit a new application at least one hundred eighty (180) days before the expiration date of the existing permit, unless the Department has granted permission to submit the application on a later date as specified in Subsections 105.03.e. and f. ()

e. Permission may be granted by the Department for submission of an application in less than one hundred eighty (180) days. The Department’s prior approval must be sought and obtained in advance of the one hundred eighty (180) days before expiration of the existing permit or commencement of new discharge. ()

f. The application will not be accepted after the expiration date of the existing permit as an application for renewal of the permit. Any applications received after the expiration of the permit will be received and reviewed as an application for a new source or new discharger. ()

04. Individual Permit Application Forms. An applicant must submit an application on one (1) or more Department-approved forms appropriate to the number and type of discharge or outfall at the applicant’s facility. A person required by Subsections 102.01 through 102.03 to obtain an individual IPDES permit must submit an application to the Department providing the information required by this subsection and Subsections 105.05 through 105.19, as applicable. The application must be submitted on one (1) or more of the EPA forms listed in this subsection, or on the Department equivalent of the listed EPA form: ()

a. All applicants, other than a POTW, TWTDS, and pesticide applicators (see Subsection 105.06), EPA Form 1 and the following additional forms, if applicable: ()

i. Applicants for a concentrated animal feeding operation (CAFO; see Subsection 105.09) or concentrated aquatic animal production (CAAP; see Subsection 105.10) facility, EPA Form 2B; ()

ii. Applicants for an existing industrial facility, including manufacturing facilities, commercial facilities, mining activities, and silviculture activities (see Subsection 105.07), EPA Form 2C; ()

iii. Applicants for a new industrial facility that discharges process wastewater (see Subsection 105.16), EPA Form 2D; ()

iv. Applicants for a new or existing industrial facility that discharges only non-process wastewater (see Subsection 105.08.a.), EPA Form 2E; ()

v. Applicants for a new or existing facility whose discharge is composed entirely of storm water associated with industrial activity (see Subsection 105.19), EPA Form 2F unless the applicant is exempted by 40 CFR 122.26(c)(1)(ii). If the applicant’s discharge is composed of storm water and non-storm water (see Subsections 105.07, 105.08, and 105.16), EPA Forms 2C, 2D, or 2E, as appropriate, are also required; or ()

vi. Applicants that operate a sludge-only facility (see Subsection 105.17), that currently does not have and is not applying for, an IPDES permit for a direct discharge to a surface water body, EPA Form 2S; ()

b. For an applicant that is a new or existing POTW (see Subsections 105.11 through 105.15): ()

- i. EPA Form 2A; and ()
- ii. EPA Form 2S, if applicable. ()

05. Application Information for All Dischargers. In addition to the application information required for specific dischargers, the Department may require the submittal of any information necessary to ensure compliance with Section 103 (Permit Prohibitions). Such information includes, but is not limited to: ()

a. Information required to determine compliance with the antidegradation policy and antidegradation implementation provisions set forth in IDAPA 58.01.02.051 and 052, “Water Quality Standards”; ()

b. Information required to determine compliance with the mixing zone provisions set forth in IDAPA 58.01.02.060, “Water Quality Standards”; or ()

c. Information necessary for the Department to authorize a compliance schedule under IDAPA 58.01.02.400, “Water Quality Standards.” ()

06. Application Requirements for Dischargers Other than Treatment Works Treating Domestic Sewage (TWTDS), Publicly Owned Treatment Works (POTWs), and Pesticide Applicators. An applicant for an IPDES permit other than a POTW and other TWTDS, must provide the following information to the Department, using the appropriate forms specified in Subsection 105.04: ()

a. The applicant’s activity that requires an IPDES permit; ()

b. The name, mailing address, e-mail address, and location of the facility for which the application is submitted; ()

c. Up to four (4) Standard Industrial Classification (SIC) codes that best identify the principal products or services provided by the facility; ()

d. The operator’s name, mailing address, e-mail address, telephone number, ownership status, Employer Identification Number (EIN) or Department equivalent, and status as federal, state, private, public, or other entity; ()

e. A statement that the facility is located in Indian country, if applicable; ()

f. A listing of all permits or construction approvals received or applied for under any of the following programs: ()

i. Hazardous waste management program under IDAPA 58.01.05, “Rules and Standards for Hazardous Waste”; ()

ii. Underground injection control (UIC) program under the Idaho Department of Water Resources UIC program at IDAPA 37.03.03, “Rules and Minimum Standards for the Construction and Use of Injection Wells”; ()

iii. IPDES program under IDAPA 58.01.25 “Rules Regulating the Idaho Pollutant Discharge Elimination System Program”; ()

iv. Prevention of significant deterioration (PSD) program under IDAPA 58.01.01, “Rules for Control of Air Pollution in Idaho”; ()

v. Nonattainment program under IDAPA 58.01.01, “Rules for Control of Air Pollution in Idaho”; ()

vi. National emission standards for hazardous pollutants (NESHAPS) preconstruction approval under IDAPA 58.01.01, “Rules for Control of Air Pollution in Idaho”; ()

- vii. Dredge or fill permits under the Clean Water Act section 404; or ()
- viii. Other relevant environmental permits, programs or activities, including those subject to state jurisdiction, approval, and permits; and ()
- g.** A topographic map, or other map if a topographic map is unavailable, extending one (1) mile beyond the property boundaries of the source, depicting: ()
 - i. The facility and each of its intake and discharge structures; ()
 - ii. The location of the facility’s hazardous waste treatment, storage, or disposal areas; ()
 - iii. The location of each well where fluids from the facility are injected underground; and ()
 - iv. The location of wells, springs, other surface water bodies, and drinking water wells listed in public records or otherwise known by the applicant to exist in the map area; and ()
- h.** A brief description of the nature of the business; ()
- i.** An indication of whether the facility uses cooling water and the source of the cooling water; and ()
- j.** An indication of whether the facility is requesting any of the variances in Subsection 310.01 if known at the time of application. ()

07. Application Requirements for Existing Manufacturing, Commercial, Mining and Silviculture Dischargers. ()

- a.** Except for a facility subject to the requirements in Subsection 105.08, an applicant for an IPDES permit for an existing discharge from a manufacturing, commercial, mining, or silviculture facility or activity must provide the following information to the Department, using the applicable forms specified in Subsection 105.04: ()
 - i. For each outfall: ()
 - (1) The latitude and longitude to the nearest second and the name of each receiving water; ()
 - (2) A narrative identifying each type of process, operation, or production area that contributes wastewater to the effluent from that outfall, including process wastewater, cooling water, and storm water runoff; processes, operations, or production areas may be described in general terms, such as dye-making reactor or distillation tower; ()
 - (3) The average flow that each process contributes and a description of the treatment the wastewater receives, including the ultimate disposal of any solid or fluid wastes other than by discharge; ()
 - (4) For a privately owned treatment works, the identity of each user of the treatment works; and ()
 - (5) The average flow of point sources composed of storm water. For this subsection, the average flow may be estimated, and the basis for the rainfall event with the method of estimation must be submitted; ()
 - ii. A description of the frequency, duration, and flow rate of each discharge occurrence for any of the discharges described in Subsections 105.07.a.i(2) through (5) that are intermittent or seasonal, except for storm water runoff, spillage, or leaks; ()
 - iii. A reasonable measure of the applicant’s actual production reported in the units used in the

applicable effluent guideline, if an effluent guideline promulgated under the Clean Water Act section 304 applies to the applicant and is expressed in terms of production or other measure of operation. The reported measure must reflect the actual production of the facility as required by Subsection 303.02.b.; ()

iv. If the applicant is subject to any present requirements or compliance schedules for construction, upgrading, or operation of waste treatment equipment, an identification of the abatement requirement, a description of the abatement project, and a listing of the required and projected final compliance dates; ()

v. A listing of any toxic pollutant that the applicant currently uses or manufactures as an intermediate or final product or byproduct, except that the Department may waive or modify this requirement; ()

(1) If the applicant demonstrates that it would be unduly burdensome to identify each toxic pollutant; and ()

(2) The Department has adequate information to issue the permit; ()

vi. An identification of any biological toxicity tests that the applicant knows or has reason to believe have been made within the last three (3) years on any of the applicant's discharges or on a receiving water in relation to a discharge; and ()

vii. The identity of each laboratory or firm and the analyses performed, if a contract laboratory or consulting firm performed any of the analyses required by Subsection 105.07.c. through m. ()

b. The owner or operator of a facility subject to this subsection must submit, with an application, a line drawing of the water flow through the facility with a water balance, showing operations contributing wastewater to the effluent and treatment units. ()

i. In the line drawing, similar processes, operations, or production areas may be indicated as a single unit, labeled to correspond to the more detailed identification under Subsections 105.07.a.i(2) through (5). ()

ii. The water balance must show approximate average flows at intake and discharge points and between units, including treatment units. ()

iii. If a water balance cannot be determined for certain activities, the applicant may instead provide a pictorial description of the nature and amount of any sources of water and any collection and treatment measures. ()

c. In addition to the items of information listed in Subsections 105.07.a. through 105.07.b., and except for information on storm water discharges required by 40 CFR 122.26, an applicant for an IPDES permit for an existing facility described in Subsection 105.07.a. must: ()

i. Collect, prepare, and submit information regarding the effluent characteristics and discharge of pollutants specified in this section; and ()

ii. When quantitative data for a pollutant are required, collect a sample of effluent and analyze it for the pollutant in accordance with analytical methods approved under 40 CFR Part 136, except that when no analytical method is approved, the applicant may use any suitable method but must describe the method. ()

d. An applicant under this subsection must: ()

i. Use grab samples in providing information regarding cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including *E. coli*), enterococci (previously known as fecal streptococcus), and volatile organics; temperature, pH, dissolved oxygen, and residual chlorine effluent data may be obtained from grab samples or from calibrated and properly maintained continuous monitors; ()

ii. For all other pollutants, use twenty-four (24) hour composite samples, unless specified otherwise at 40 CFR Part 136, with a minimum of four (4) grab samples, except that a minimum of one (1) grab sample may be

taken for effluents from holding ponds or other impoundments with a retention period greater than twenty-four (24) hours; ()

e. For purposes of Subsection 105.07.c., exceptions to testing and data provision requirements for effluent characteristics include: ()

i. When an applicant has two (2) or more outfalls with substantially identical effluents, the Department may allow the applicant to test only one (1) outfall and report that the quantitative data also apply to the substantially identical outfall; and ()

ii. An applicant's duty under Subsections 105.07.j., k., and l. to provide quantitative data for certain pollutants known or believed to be present does not apply to pollutants present in a discharge solely as the result of their presence in intake water; however, an applicant must report that those pollutants are present. ()

f. For storm water discharges, associated with an existing facility described in Subsection 105.07.a., from storm events which yield more than one-tenth (0.1) inch of rainfall: ()

i. All samples must be collected from the discharge resulting from a storm event and at least seventy-two (72) hours after the previously measurable storm event exceeding one-tenth (0.1) inch rainfall. Where feasible, the variance in the duration of the event and the total rainfall of the event should not exceed fifty percent (50%) from the average or median rainfall event in that area; and ()

ii. For all applicants, a flow-weighted composite sample must be taken for either the entire discharge or for the first three (3) hours of the discharge, except for the following: ()

(1) The sampling may be conducted with a continuous sampler or as a combination of a minimum of three (3) sample aliquots taken in each hour of discharge for the entire discharge or for the first three (3) hours of the discharge, with each aliquot being separated by a minimum period of fifteen (15) minutes. If the Department approves, an applicant for a storm water discharge permit under Subsection 105.18 may collect flow-weighted composite samples using different protocols with respect to the time duration between the collection of sample aliquots; ()

(2) A minimum of one (1) grab sample may be taken for storm water discharges from holding ponds or other impoundments with a retention period greater than twenty-four (24) hours; or ()

(3) For a flow-weighted composite sample, only one (1) analysis of the composite of aliquots is required; ()

iii. For samples taken from discharges associated with industrial activities, quantitative data must be reported for the grab sample taken during the first thirty (30) minutes, or as soon thereafter as practicable, of the discharge for all pollutants specified in Subsection 105.19 except that for all storm water permit applicants taking flow-weighted composites, quantitative data must be reported for all pollutants specified in 40 CFR 122.26(a) through (b) and (e) through (g), Subsections 105.18 and 105.19, but not for pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including *E. coli*), and enterococci (previously known as fecal streptococcus); ()

iv. The Department may, on a case-by-case basis, allow or establish appropriate site-specific sampling procedures or requirements, including: ()

(1) Sampling locations; ()

(2) The season in which the sampling takes place; ()

(3) The minimum duration between the previous measurable storm event and the sampled storm event; ()

(4) The minimum or maximum level of precipitation required for an appropriate storm event; ()

- (5) The form of precipitation sampled, whether snow melt or rain fall; ()
- (6) Protocols for collecting samples under 40 CFR Part 136; and ()
- (7) Additional time for submitting data; and ()

v. An applicant is deemed to know or have reason to believe that a pollutant is present in an effluent if an evaluation of the expected use, production, or storage of the pollutant, or any previous analyses for the pollutant, show that pollutant's presence. ()

g. Unless a reporting requirement is waived under Subsection 105.07.h., every applicant subject to this subsection must report quantitative data for the following pollutants for every outfall: ()

- i. 5-day biochemical oxygen demand (BOD5); ()
- ii. Chemical oxygen demand (COD); ()
- iii. Total organic carbon (TOC); ()
- iv. Total suspended solids (TSS); ()
- v. Ammonia, as N; ()
- vi. Temperature (both winter and summer); and ()
- vii. pH. ()

h. The Department may waive the reporting requirements under Subsection 105.07.g. for individual point sources or for a particular industry category for one (1) or more of the pollutants listed in Subsection 105.07.g. if the applicant demonstrates that information adequate to support issuance of a permit can be obtained with less stringent requirements. ()

i. Except as provided in Subsection 105.07.o., an applicant with an existing facility described in Subsection 105.07.a. that has processes that qualify in one (1) or more of the primary industry categories shown in Appendix A to 40 CFR Part 122 contributing to a discharge, must report quantitative data for pollutants in each outfall containing process wastewater as follows: ()

i. Data for the organic toxic pollutants listed in Table II of Appendix D to 40 CFR Part 122 in the fractions designated in Table I of Appendix D to 40 CFR Part 122. For purposes of this subsection: ()

(1) Table II of Appendix D to 40 CFR Part 122, lists the organic toxic pollutants in each fraction that result from the sample preparation required by the analytical procedure that uses gas chromatography/mass spectrometry; and ()

(2) If the Department determines that an applicant falls within an industrial category for the purposes of selecting fractions for testing, that determination does not establish the applicant's category for any other purpose; see Notes 2 and 3 to 40 CFR 122.21; and ()

ii. Data for the toxic metals, cyanide, and total phenols listed in Table III of Appendix D to 40 CFR Part 122. ()

j. An applicant under this section must disclose whether the applicant knows or has reason to believe that any of the conventional and nonconventional pollutants in Table IV of Appendix D to 40 CFR Part 122 are discharged from each outfall. If an applicable effluent limitations guideline limits the pollutant either directly or indirectly by express limitations on an indicator, the applicant must report quantitative data. For every pollutant discharged that is not limited in an effluent limitations guideline, the applicant must either report quantitative data or

briefly describe the reasons the pollutant is expected to be discharged. ()

k. An applicant under this subsection must disclose whether the applicant knows or has reason to believe that any of the organic toxic pollutants listed in Table II or the toxic metals, cyanide, or total phenols listed in Table III of Appendix D to 40 CFR Part 122 for which quantitative data are not otherwise required under Subsection 105.07.i., are discharged from each outfall. Unless an applicant qualifies as a small business under Subsection 105.07.o., the applicant must: ()

i. Report quantitative data for every pollutant expected to be discharged in concentrations of ten (10) parts per billion or greater; ()

ii. Report quantitative data for acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, if any of these four (4) pollutants are expected to be discharged in concentrations of one hundred (100) parts per billion or greater; and ()

iii. For every pollutant expected to be discharged in concentrations less than ten (10) parts per billion, or in the case of acrolein, acrylonitrile, 2,4 dinitrophenol, and 2-methyl-4, 6 dinitrophenol, in concentrations less than one hundred (100) parts per billion, either submit quantitative data, or briefly describe the reasons the pollutant is expected to be discharged and submit any supporting documentation. ()

l. An applicant under this subsection must disclose whether the applicant knows or has reason to believe that asbestos or any of the hazardous substances listed in Table V of Appendix D to 40 CFR Part 122 are discharged from each outfall. For every pollutant expected to be discharged, the applicant must briefly describe the reasons the pollutant is expected to be discharged and report any quantitative data it has for any pollutant. ()

m. An applicant under this subsection must disclose and report qualitative data, generated using a screening procedure not calibrated with analytical standards, for 2,3,7, 8-tetrachlorodibenzo-p-dioxin (TCDD) if the applicant: ()

i. Uses or manufactures the following: ()

(1) 2,4,5-trichlorophenoxy acetic acid (2,4,5,-T); ()

(2) 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5,-TP); ()

(3) 2-(2,4,5-trichlorophenoxy) ethyl, 2,2-dichloropropionate (Erbon); ()

(4) o,o-dimethyl o-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel); ()

(5) 2,4,5-trichlorophenol (TCP); or ()

(6) Hexachlorophene (HCP); or ()

ii. Knows or has reason to believe that TCDD is or may be present in an effluent. ()

n. Where quantitative data are required in Subsections 105.07.c. through m., existing data may be used, if available, in lieu of sampling done solely for the purpose of the application, provided that: ()

i. All data requirements are met; sampling was performed, collected, and analyzed no more than four and one-half (4 ½) years prior to submission; ()

ii. All data are representative of the discharge; and ()

iii. All available representative data are considered in the values reported. ()

o. An applicant under this subsection is exempt from the quantitative data requirements in Subsections 105.07.i. or 105.07.j. for the organic toxic pollutants listed in Table II of Appendix D to 40 CFR Part

122, if that applicant qualifies as a small business under one (1) of the following criteria: ()

i. The applicant is a coal mine with an expected total annual production of less than one hundred thousand (100,000) tons per year; or ()

ii. The applicant has gross total annual sales averaging less than two hundred eighty-seven thousand, three hundred dollars (\$287,300) per year in 2014 dollars. ()

p. In addition to the information reported on the application form, an applicant under this subsection must provide at the Department's request, any other information that may be reasonably required to assess the discharges of the facility and to determine whether to issue an IPDES permit. The additional information may include additional quantitative data and bioassays to assess the relative toxicity of discharges to aquatic life and information required to determine the cause of the toxicity. ()

08. Application Requirements for New or Existing Manufacturing, Commercial, Mining, and Silviculture Facilities that Discharge only Non-Process Wastewater. ()

a. An applicant that is a manufacturing, commercial, mining, or silvicultural discharger that discharges only non-process wastewater not regulated by an effluent limitations guideline or new source performance standard must provide the following information to the Department for all discharges, except for storm water discharges, using the applicable forms specified in Subsection 105.04: ()

i. The number of each outfall, the latitude and longitude to the nearest second, and the name of each receiving water; ()

ii. For a new discharger, the date of expected commencement of discharge; ()

iii. An identification of the general type of waste discharged, or expected to be discharged upon commencement of operations, including sanitary wastes, restaurant or cafeteria wastes, or non-contact cooling water; ()

iv. An identification of cooling water additives, if any, that are used or expected to be used upon commencement of operations, along with their composition if existing composition is available; ()

v. Effluent characteristics prepared and submitted as described in Subsections 105.08.b. and 105.08.c.; ()

vi. A description of the frequency of flow and duration of any seasonal or intermittent discharge, except for storm water runoff, leaks, or spills; ()

vii. A brief description of any treatment system used or to be used; ()

viii. Any additional information the applicant wishes to be considered, such as influent data for the purpose of obtaining net credits under Subsection 303.07; and ()

ix. The signature of the certifying official under Section 090 (Signature Requirements). ()

b. Except as otherwise provided in Subsections 105.08.d. through g., an application for a discharger described in Subsection 105.08.a. must include quantitative data for the following pollutants or parameters: ()

i. 5-day biochemical oxygen demand (BOD5); ()

ii. Total suspended solids (TSS); ()

iii. Fecal coliform (including *E. coli*), if believed present or if sanitary waste is or will be discharged; ()

- iv. Total residual chlorine (TRC), if chlorine is used; ()
- v. Oil and grease; ()
- vi. Chemical oxygen demand (COD), if non-contact cooling water is or will be discharged; ()
- vii. Total organic carbon (TOC), if non-contact cooling water is or will be discharged; ()
- viii. Ammonia, as N; ()
- ix. Discharge flow; ()
- x. pH; and ()
- xi. Temperature, both in winter and summer, respectively. ()
- c. For purposes of the data required under Subsection 105.08.b.: ()
 - i. Grab samples must be used for oil and grease, fecal coliform (including *E. coli*), and volatile organics. Temperature, pH, and TRC effluent data may be obtained from grab samples or from calibrated and properly maintained continuous monitors; ()
 - ii. Twenty-four (24) hour composite samples must be used for pollutants listed in Subsection 105.08.b., other than those specified in Subsection 105.08.c.i., unless specified otherwise at 40 CFR Part 136. Twenty-four (24) hour composite samples must, at a minimum, be composed of four (4) grab samples unless specified otherwise at 40 CFR Part 136. For a composite sample, only one (1) analysis of the composite aliquots is required; ()
 - iii. The quantitative data may be collected over the past three hundred sixty-five (365) days, as long as the data is representative of current operations, and must include maximum daily value, average daily value, and number of measurements taken; and ()
 - iv. The applicant must collect and analyze samples in accordance with 40 CFR Part 136. ()
- d. The Department may waive the testing and reporting requirements for any of the pollutants or flow listed in Subsection 105.08.c. if the applicant requests a waiver with its application or earlier, and demonstrates that information adequate to support permit issuance can be obtained through less stringent requirements. ()
- e. If the applicant is a new discharger, the applicant must: ()
 - i. Complete and submit Item IV of EPA Form 2E, or the Department equivalent, according to Subsection 105.04.a.iv., by providing quantitative data in compliance with that section no later than two (2) years after the discharge commences, except that the applicant need not complete those portions of Item IV requiring tests that the applicant has already performed and reported under the discharge monitoring requirements of its IPDES or NPDES permit; and ()
 - ii. Include estimates and the source of each estimate instead of sampling data for the pollutants or parameters listed in Subsection 105.08.b.; ()
- f. For purposes of the data required under this subsection, all pollutant levels must be reported or estimated as concentration and as total mass, except for flow, pH, and temperature. Submittal of all estimated data must be accompanied by documents supporting the estimated value. ()
- g. An applicant's duty, under Subsections 105.08.b., c., and e., to provide quantitative data or estimates of certain pollutants does not apply to pollutants present in a discharge solely as a result of their presence in intake water. However, an applicant must report the presence of those pollutants. If the requirements of Subsection 303.07 are met, net credit may be provided for the presence of pollutants in intake water. ()

09. Application Requirements for New and Existing Concentrated Animal Feeding Operations (CAFO). An applicant for an IPDES permit for a new or existing CAFO, as defined in 40 CFR 122.23(b) must provide the following information to the Department, using the applicable forms specified in Subsection 105.04:

- ()
- a. The name of the owner or operator; ()
- b. The facility location and mailing addresses; ()
- c. Latitude and longitude of the production area to the nearest second, measured at the entrance to the production area; ()
- d. A topographic map of the geographic area in which the concentrated animal feeding operation is located, showing the specific location of the production area; ()
- e. Specific information about the number and type of animals, including, if applicable: beef cattle, broilers, layers, swine weighing fifty-five (55) pounds or more, swine weighing less than fifty-five (55) pounds, mature dairy cows, dairy heifers, veal calves, sheep and lambs, horses, ducks, turkeys, or other animals, whether in open confinement or housed under roof; ()
- f. The type of containment and total capacity in tons or gallons of any anaerobic lagoon, roofed storage shed, storage pond, under-floor pit, above-ground storage tank, below-ground storage tank, concrete pad, impervious soil pad, or other structure or area used for containment and storage of manure, litter, and process wastewater; ()
- g. The total number of acres available and under the applicant's control for land application of manure, litter, or process wastewater; ()
- h. Estimated amounts of manure, litter, and process wastewater generated per year in tons or gallons; ()
- i. Estimated amounts of manure, litter, and process wastewater transferred to other persons per year in tons or gallons; and ()
- j. A nutrient management plan that has been completed and will be implemented upon the date of permit coverage. A nutrient management plan must meet, at a minimum, the requirements specified in 40 CFR 122.42(e), including for all CAFOs subject to 40 CFR 412.30 through 412.37, 412.40 through 412.47, or the requirements of 40 CFR 412.4(c), as applicable. ()

10. Application Requirements for New and Existing Concentrated Aquatic Animal Production (CAAP) Facilities. An applicant for an IPDES permit for a new or existing CAAP facility must provide the following information, using the applicable forms specified in Subsection 105.04:

- a. The maximum daily and average monthly flow from each outfall; ()
- b. The number of ponds, raceways, and similar structures; ()
- c. The name of the receiving water and the source of intake water; ()
- d. For each species of aquatic animal, the total yearly and maximum harvestable weight; and ()
- e. The calendar month of maximum feeding and the total mass of food fed during that month. ()

11. Application Requirements for New and Existing POTWs and Other Dischargers Designated by the Department. ()

a. Except as provided in Subsection 105.11.b., an applicant that is a POTW and any other discharger designated by the Department must provide the information in this subsection, using the applicable forms specified in Subsection 105.04.b. An applicant under this subsection must submit all information available at the time of application; however, they may provide information by referencing information previously submitted to the Department. ()

b. The Department may waive any requirement of this subsection if it has access to substantially identical information or if that information is not of material concern for a specific permit, if approved by the EPA Regional Administrator. The waiver request to the Regional Administrator must include the Department's justification for the waiver. A Regional Administrator's disapproval of a Department's proposed waiver does not constitute final agency action, but does provide notice to the state and permit applicant(s) that EPA may object to any state-issued permit issued in the absence of the required information. ()

c. An applicant under this subsection must provide: ()

i. Name, mailing address, and location of the facility for which the application is submitted; ()

ii. Name, mailing address, e-mail address, EIN or Department equivalent, and telephone number of the applicant, and a statement whether the applicant is the facility's owner, operator, or both; ()

iii. A list of all environmental permits or construction approvals received or applied for, including dates, under any of the following programs or types of activities: ()

(1) Hazardous waste management program under IDAPA 58.01.05, "Rules and Standards for Hazardous Waste"; ()

(2) Underground injection control (UIC) program under the Idaho Department of Water Resources UIC program at IDAPA 37.03.03, "Rules and Minimum Standards for the Construction and Use of Injection Wells"; ()

(3) IPDES program under IDAPA 58.01.25, "Rules Regulating the Idaho Pollutant Discharge Elimination System Program"; ()

(4) Prevention of significant deterioration (PSD) program under IDAPA 58.01.01, "Rules for the Control of Air Pollution in Idaho"; ()

(5) Nonattainment program under IDAPA 58.01.01, "Rules for the Control of Air Pollution in Idaho"; ()

(6) National emission standards for hazardous pollutants (NESHAPS) preconstruction approval under IDAPA 58.01.01, "Rules for the Control of Air Pollution in Idaho"; ()

(7) Dredge or fill permits under the Clean Water Act section 404; ()

(8) Sludge Management Program under IDAPA 58.01.16.650, "Wastewater Rules," and Section 380 (Sewage Sludge) of these rules; and ()

(9) Other relevant environmental permits, programs, or activities, including those subject to state jurisdiction, approval, and permits; ()

iv. The name, population, and EDUs of each municipal entity served by the facility, including unincorporated connector districts, a statement whether each municipal entity owns or maintains the collection system and, if the information is available, whether the collection system is a separate sanitary sewer or a combined storm and sanitary sewer; ()

v. A statement whether the facility is located in Indian country and whether the facility discharges to a receiving stream that flows through Indian country; ()

vi. The facility's design flow rate, or the wastewater flow rate the plant was built to handle, annual average daily flow rate, and maximum daily flow rate for each of the previous three (3) years; ()

vii. A statement identifying the types of collection systems, either separate sanitary sewers or combined storm and sanitary sewers, used by the treatment works, and an estimate of the percent of sewer line that each type comprises; ()

viii. The following information for outfalls to waters of the United States and other discharge or disposal methods: ()

(1) For effluent discharges to waters of the United States, the total number and types of outfalls including treated effluent, combined sewer overflows, bypasses, constructed emergency overflows; ()

(2) For wastewater discharged to surface impoundments, the location of each surface impoundment, the average daily volume discharged to each surface impoundment, and a statement whether the discharge is continuous or intermittent; ()

(3) For wastewater applied to the land, the location of each land application site, the size in acres of each land application site, the average daily volume in gallons per day applied to each land application site, and a statement whether the land application is continuous or intermittent; ()

(4) For effluent sent to another facility for treatment prior to discharge, the means by which the effluent is transported, the name, mailing address, e-mail address, contact person, and phone number of the organization transporting the discharge, if the transport is provided by a party other than the applicant, the name, mailing address, e-mail address, contact person, phone number, and IPDES or NPDES permit number, if any, of the receiving facility, and the average daily flow rate from this facility into the receiving facility in million gallons per day (MGD); and ()

(5) For wastewater disposed of in a manner not included in Subsections 105.11.c.viii(1) through (4), including underground percolation and underground injection, a description of the disposal method, the location and size of each disposal site, if applicable, the annual average daily volume in gallons per day disposed of by this method, and a statement whether disposal by this method is continuous or intermittent; and ()

ix. The name, mailing address, e-mail address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the POTW facility. ()

x. An indication of whether applicant is operating under or requesting to operate under a variance as specified in Subsection 310.02 if known at the time of application. ()

d. In addition to the information described in Subsection 105.11.c., an applicant under this subsection with a design flow greater than or equal to zero point one (0.1) million gallons per day (MGD) must provide: ()

i. The current average daily volume in gallons per day of inflow and infiltration, and a statement describing steps the facility is taking to minimize inflow and infiltration; ()

ii. A topographic map, or other map if a topographic map is unavailable, extending at least one (1) mile beyond property boundaries of the treatment plant including all unit processes, and showing: ()

(1) The treatment plant area and unit processes; ()

(2) The major pipes or other structures through which wastewater enters the treatment plant and the pipes or other structures through which treated wastewater is discharged from the treatment plant, including outfalls from bypass piping, if applicable; ()

(3) Each well where fluids from the treatment plant are injected underground; ()

- (4) Wells, springs, and other surface water bodies listed in public records or otherwise known to the applicant within one-quarter (1/4) mile of the property boundaries of the treatment works; ()
- (5) Sewage sludge management facilities including on-site treatment, storage, and disposal sites; and ()
- (6) Each location at which waste classified as hazardous under IDAPA 58.01.05, “Rules and Standards for Hazardous Waste,” enters the treatment plant by truck, rail, or dedicated pipe; ()
- iii. A process flow diagram or schematic as follows: ()
- (1) A diagram showing the processes of the treatment plant, including all bypass piping and all backup power sources or redundancy in the system, including a water balance showing all treatment units, including disinfection, and showing daily average flow rates at influent and discharge points and approximate daily flow rates between treatment units; and ()
- (2) A narrative description of the diagram; and ()
- iv. The following information regarding scheduled improvements: ()
- (1) The outfall number of each affected outfall; ()
- (2) A narrative description of each required improvement; ()
- (3) Scheduled dates for commencement and completion of construction, commencement of discharge and attainment of operational level, and actual completion date for any event listed in this subsection that has been completed; and ()
- (4) A description of permits and authorizations concerning other federal and state requirements. ()
- e. An applicant under this subsection must provide the following information for each outfall, including bypass points, through which effluent is discharged, as applicable: ()
- i. For each outfall: ()
- (1) The outfall number; ()
- (2) The county, and city or town in which the outfall is located; ()
- (3) The latitude and longitude, to the nearest second; ()
- (4) The distance from shore and depth below surface; ()
- (5) The average daily flow rate, in million gallons per day (MGD); ()
- (6) If the outfall has a seasonal or periodic discharge, the number of times per year the discharge occurs, the duration of each discharge, the flow of each discharge, and the months in which discharge occurs; and ()
- (7) A statement whether the outfall is equipped with a diffuser and the type of diffuser used, such as high-rate; ()
- ii. For each outfall discharging effluent to waters of the United States, the following receiving water information, if the information is available: ()
- (1) The name of each receiving water; ()

- (2) The critical flow of each receiving stream; and ()
- (3) The total hardness of the receiving stream at critical low flow; and ()
- iii. For each outfall discharging to waters of the United States, the following information describing the treatment of the discharges: ()
 - (1) The highest level of treatment, including primary, equivalent to secondary, secondary, advanced, or other treatment level provided for: ()
 - (a) The design biochemical oxygen demand removal percentage; ()
 - (b) The design suspended solids removal percentage; ()
 - (c) The design phosphorus removal percentage; ()
 - (d) The design nitrogen removal percentage; and ()
 - (e) Any other removals that an advanced treatment system is designed to achieve; and ()
 - (2) A description of the type of disinfection used, and a statement whether the treatment plant de-chlorinates, if disinfection is accomplished through chlorination. ()
- f. In addition to Subsection 105.11.a., and except as provided in Subsection 105.11.h., an applicant under this subsection must undertake sampling and analysis and submit effluent monitoring information for samples taken from each outfall through which effluent is discharged to waters of the United States, except for combined sewer overflows, including the following if applicable: ()
 - i. Sampling and analysis for the pollutants listed in Appendix J, Table 1A to 40 CFR Part 122; ()
 - ii. For an applicant with a design flow greater than or equal to zero point one (0.1) million gallons per day (MGD), sampling and analysis for the pollutants listed in Appendix J, Table 1 to 40 CFR Part 122, except that a facility that does not use chlorine for disinfection, does not use chlorine elsewhere in the treatment process, and has no reasonable potential to discharge chlorine in the facility's effluent, is not required to sample or analyze chlorine; ()
 - iii. Sampling and analysis for the pollutants listed in Appendix J, Table 2 to 40 CFR Part 122 and for any other pollutants for which the state or EPA has established water quality standards applicable to the receiving waters if the facility is: ()
 - (1) A POTW that has a design flow rate equal to or greater than one (1) million gallons per day (MGD); ()
 - (2) A POTW that has an approved pretreatment program; ()
 - (3) A POTW that is required to develop a pretreatment program; or ()
 - (4) Any POTW, as required by the Department to ensure compliance with these rules; ()
 - iv. Sampling and analysis for additional pollutants, as the Department may require, on a case-by-case basis; ()
 - v. Data from a minimum of three (3) samples taken within four and one-half (4 ½) years before the date of the permit application; to meet this requirement: ()

- (1) Samples must be representative of the seasonal variation in the discharge from each outfall; ()
 - (2) Existing data may be used, if available, in lieu of sampling done solely for the purpose of this application; and ()
 - (3) Additional samples may be required by the Department on a case-by-case basis; and ()
 - vi. All existing data for pollutants specified in Subsections 105.11.f.i. through iv. collected within four and one-half (4 ½) years of the application. This data must be included in the pollutant data summary submitted by the applicant, except that if the applicant samples for a specific pollutant on a monthly or more frequent basis, only the data collected for that pollutant within one (1) year of the application must be provided. ()
 - g. To meet the information requirements of Subsection 105.11.f., an applicant must: ()
 - i. Collect samples of effluent and analyze the samples for pollutants in accordance with analytical methods approved under 40 CFR Part 136 unless an alternative is specified in the existing IPDES or NPDES permit; ()
 - ii. Use the following methods: ()
 - (1) Grab samples for pH, temperature, cyanide, total phenols, residual chlorine, oil and grease, fecal coliform (including *E. coli*), and volatile organics. Temperature, pH, dissolved oxygen, and residual chlorine data may be obtained from grab samples or from calibrated and properly maintained continuous monitors; ()
 - (2) Twenty-four (24) hour composite samples for all other pollutant, unless specified otherwise at 40 CFR Part 136, using a minimum of four (4) grab samples; for a composite sample, only one (1) analysis of the composite of aliquots is required; and ()
 - iii. Provide at least the following information for each parameter: ()
 - (1) Maximum daily discharge, expressed as concentration or mass, based upon actual sample values; ()
 - (2) Average daily discharge for all samples, expressed as concentration or mass, and the number of samples used to obtain this value; ()
 - (3) The analytical method used; and ()
 - (4) The threshold level, such as the method detection limit, minimum level, or other designated method endpoint for the analytical method used; and ()
 - iv. Report metals as total recoverable, unless the Department requires otherwise. ()
 - h. When an applicant under this subsection has two (2) or more outfalls with substantially identical effluent discharging to the same receiving water segment, the Department may, on a case-by-case basis, allow the applicant to submit sampling data for only one (1) outfall. The Department may also allow an applicant to composite samples from one (1) or more outfalls that discharge into the same mixing zone, pursuant to IDAPA 58.01.02, "Water Quality Standards." For POTWs applying prior to commencement of discharge, data must be submitted no later than twenty-four (24) months after the commencement of discharge. ()
- 12. Whole Effluent Toxicity (WET) Monitoring for POTWs. ()**
- a. An applicant for a permit under Subsection 105.11 must submit information on effluent monitoring for WET, including an identification of any WET tests conducted during the four and one-half (4 ½) years before the date of the application on any of the applicant's discharges or on any receiving water near the discharge. For POTWs applying prior to commencement of discharge, data must be submitted no later than twenty-four (24) months after the

commencement of discharge. ()

b. An applicant under Subsection 105.11 must submit to the Department, in compliance with Subsections 105.12.c. through f., the results of valid WET tests for acute or chronic toxicity for samples taken from each outfall through which effluent is discharged to surface waters, except for combined sewer overflows, if the applicant: ()

i. Has a design flow rate greater than or equal to one (1) million gallons per day (MGD); ()

ii. Has an approved pretreatment program or is required to develop a pretreatment program; or ()

iii. Is required to comply with this subsection by the Department, based on consideration of the following factors: ()

(1) The variability of the pollutants or pollutant parameters in the POTW effluent based on chemical-specific information, the type of treatment plant, and types of industrial contributors; ()

(2) The ratio of effluent flow to receiving stream flow; ()

(3) Existing controls on point or non-point sources, including total maximum daily load calculations for the receiving stream segment and the relative contribution of the POTW; ()

(4) Receiving water characteristics, including possible or known water quality impairment, and whether the POTW discharges to a water designated as an outstanding natural resource water; or ()

(5) Other considerations, including the history of toxic impacts and compliance problems at the POTW that the Department determines could cause or contribute to adverse water quality impacts. ()

c. When an applicant under Subsection 105.11 has two (2) or more outfalls with substantially identical effluent discharging to the same receiving water segment, the Department may, on a case-by-case basis, allow the applicant to submit whole effluent toxicity data for only one (1) outfall. The Department may also allow an applicant to composite samples from one (1) or more outfalls that discharge into the same mixing zone. ()

d. An applicant under Subsection 105.12.b. that is required to perform WET testing must provide: ()

i. Results of a minimum of four (4) quarterly tests for a year, from the year preceding the permit application or results from four (4) tests performed at least annually in the four and one-half (4 ½) year period before the application, if the results show no appreciable toxicity using a safety factor determined by the Department; ()

ii. The number of chronic or acute whole effluent toxicity tests that have been conducted since the last permit reissuance; ()

iii. The results using the form provided by the Department, or test summaries, if available and comprehensive, for each WET test conducted under this subsection for which the information has not been reported previously to the Department; ()

iv. For WET data submitted to the Department within four and one-half (4 ½) years before the date of the application, the dates on which the data were submitted and a summary of the results; and ()

v. Any information on the cause of toxicity and written details of any toxicity reduction evaluation conducted, if any WET test conducted within the past four and one-half (4 ½) years revealed toxicity. ()

e. An applicant under Subsection 105.11 must conduct tests with no less than two (2) species, including fish, invertebrate, or plant, and test for acute or chronic toxicity, depending on the range of receiving water

dilution. Unless the Department directs otherwise, an applicant must conduct acute or chronic testing based on the following dilutions: ()

i. Acute toxicity testing if the dilution of the effluent is greater than a ratio of one thousand to one (1,000:1) at the edge of the mixing zone; ()

ii. Acute or chronic toxicity testing, if the dilution of the effluent is between a ratio of one hundred to one (100:1) and one thousand to one (1,000:1) at the edge of the mixing zone; acute testing may be more appropriate at the higher end of this range (one thousand to one (1,000:1)), and chronic testing may be more appropriate at the lower end of this range (one hundred to one (100:1)); or ()

iii. Chronic testing if the dilution of the effluent is less than a ratio of one hundred to one (100:1) at the edge of the mixing zone. ()

f. For purposes of the WET testing required by this section, an applicant must conduct testing using methods approved under 40 CFR Part 136. ()

13. Application Requirements for POTWs Receiving Industrial Discharges. ()

a. An applicant for an IPDES permit as a POTW under Subsection 105.11 must state in its application the number of significant industrial users (SIU) and non-significant categorical industrial users (NSCIU), as defined at 40 CFR 403.3(v), including SIUs and NSCIUs that truck or haul waste, discharging to the POTW. A POTW with one (1) or more SIUs must provide the following information for each SIU that discharges to the POTW: ()

i. The name and mailing address of the SIU; ()

ii. A description of all industrial processes that affect or contribute to the SIU's discharge; ()

iii. The principal products and raw materials of each SIU that affects or contributes to that SIU's discharge; ()

iv. The average daily volume of wastewater discharged by the SIU, indicating the amount attributable to process flow and non-process flow; ()

v. A statement whether the SIU is subject to local limits; ()

vi. A statement whether the SIU is subject to one (1) or more categorical standards, and if so, under which category and subcategory; and ()

vii. A statement whether any problems at the POTW, including upsets, pass-through, or interference have been attributed to the SIU in the past four and one-half (4 ½) years. ()

b. The information required in Subsection 105.13.a. may be waived by the Department for a POTW with a pretreatment program if the applicant has submitted either of the following that contains information substantially identical to the information required in Subsection 105.13.a.: ()

i. An annual report submitted within one (1) year of the application; or ()

ii. A pretreatment program. ()

14. Application Requirements for POTWs Receiving Discharges from Hazardous Waste Generators and from Waste Cleanup or Remediation Sites. ()

a. A POTW receiving hazardous or corrective action wastes or wastes generated at another type of cleanup or remediation site must provide the following information: ()

i. If the POTW receives, or has been notified that it will receive by truck, rail, or dedicated pipe, any

wastes that are regulated as hazardous wastes under 40 CFR Part 261 and IDAPA 58.01.05, “Rules and Standards for Hazardous Waste,” the applicant must report the following: ()

(1) The method of delivery, including by truck, rail, or dedicated pipe, by which the waste is received; and ()

(2) The applicable hazardous waste number designated in IDAPA 58.01.05, “Rules and Standards for Hazardous Waste” for the transported waste, and the amount received annually of each hazardous waste; and ()

ii. If the POTW receives, or has been notified that it will receive, wastewater that originates from remedial activities, including those undertaken under Comprehensive Environmental Response, Compensation, and Liability Act, and the Resource Conservation and Recovery Act sections 3004(u) or 3008(h), the applicant must report the following: ()

(1) The identity and description of each site or facility at which the wastewater originates; ()

(2) The identity of any known hazardous constituents specified in IDAPA 58.01.05, “Rules and Standards for Hazardous Waste,” in the wastewater; and ()

(3) The extent of any treatment the wastewater receives or will receive before entering the POTW. ()

b. An applicant under this subsection is exempt from the requirements of Subsection 105.14.a.ii. if the applicant receives no more than fifteen (15) kilograms per month of hazardous wastes, unless the wastes are acute hazardous wastes as specified in IDAPA 58.01.05, “Rules and Standards for Hazardous Waste.” ()

15. Application Requirements for POTWs with Combined Sewer Systems and Overflows. A POTW applicant with a combined sewer system must provide the following information on the combined sewer system and outfalls: ()

a. A system map indicating the location of: ()

i. All combined sewer overflow discharge points; ()

ii. Any sensitive use areas potentially affected by combined sewer overflows including beaches, drinking water supplies, shellfish beds, sensitive aquatic ecosystems; ()

iii. Outstanding national resource waters potentially affected by combined sewer overflows; and ()

iv. Waters supporting threatened and endangered species potentially affected by combined sewer overflows; ()

b. A system diagram of the combined sewer collection system that includes the locations of: ()

i. Major sewer trunk lines, both combined and separate sanitary; ()

ii. Points where separate sanitary sewers feed into the combined sewer system; ()

iii. In-line and off-line storage structures; ()

iv. Flow-regulating devices; and ()

v. Pump stations; ()

c. Information on each outfall for each combined sewer overflow discharge point covered by the permit application, including: ()

- i. The outfall number; ()
- ii. The county and city or town in which the outfall is located; ()
- iii. The latitude and longitude, to the nearest second; and ()
- iv. The distance from shore and depth below surface; ()
- d.** A statement whether the applicant monitored any of the following in the past year for a combined sewer overflow: ()
 - i. Rainfall; ()
 - ii. Overflow volume; ()
 - iii. Overflow pollutant concentrations; ()
 - iv. Receiving water quality; ()
 - v. Overflow frequency; and ()
 - vi. The number of storm events monitored in the past year; ()
- e.** Information regarding the number of combined sewer overflows from each outfall in the past year and, if available: ()
 - i. The average duration per event; ()
 - ii. The average volume for each event; and ()
 - iii. The minimum rainfall that caused a combined sewer overflow event in the last year; ()
- f.** The name of each receiving water; ()
- g.** A description of any known water quality impact caused by the combined sewer overflow operations, including permanent or intermittent beach closings, permanent or intermittent shellfish bed closings, fish kills, fish advisories, other recreational loss, or the exceedance of any applicable state water quality standard, on the receiving water; and ()
- h.** All applicants must provide the name, mailing address, e-mail address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility. ()
- 16. Application Requirements for New Sources and New Discharges.** ()
 - a.** An applicant for an IPDES permit for a new manufacturing, commercial, mining, silviculture, or other discharge, except for a new discharge from a facility subject to the requirements of Subsection 105.08 or a new discharge of storm water associated with industrial activity that is subject to the requirements of Subsection 105.19, except as provided by Subsection 105.19.c., must provide the following information to the Department, using the applicable forms specified in Subsection 105.04.b.: ()
 - i. The latitude and longitude to the nearest second of the expected outfall location and the name of each receiving water; ()
 - ii. The expected date the discharge will commence; ()
 - iii. The following information on flows, sources of pollution, and treatment technologies: ()

(1) A narrative describing the treatment that the wastewater will receive, identifying all operations contributing wastewater to the effluent, stating the average flow contributed by each operation, and describing the ultimate disposal of any solid or liquid wastes not discharged; ()

(2) A line drawing of the water flow through the facility with a water balance as described in Subsection 105.07.b.; and ()

(3) If any of the expected discharges will be intermittent or seasonal, a description of the frequency, duration, and maximum daily flow rate of each discharge occurrence, except for storm water runoff, spillage, or leaks; ()

iv. If a new source performance standard promulgated under the Clean Water Act section 306 or an effluent limitation guideline applies to the applicant and is expressed in terms of production or other measure of operation, a reasonable calculation of the applicant's expected actual production reported in the units used in the applicable effluent guideline or new source performance standard, as required by Subsection 303.02.b., for each of the first three (3) years. The applicant may submit alternative estimates if production is likely to vary; ()

v. The effluent characteristics information as described in Subsection 105.16.b.; ()

vi. The existence of any technical evaluation concerning the applicant's wastewater treatment, along with the name and location of similar plants of which the applicant has knowledge; ()

vii. Any optional information the permittee wishes the Department to consider. ()

b. An applicant under this section must provide the following effluent characteristics information: ()

i. Estimated daily maximum, daily average, and the source of that information for each outfall for the following pollutants or parameters: ()

(1) Five (5)-day biochemical oxygen demand (BOD₅); ()

(2) Chemical oxygen demand (COD); ()

(3) Total organic carbon (TOC); ()

(4) Total suspended solids (TSS); ()

(5) Flow; ()

(6) Ammonia, as N; ()

(7) Temperature, in both winter and summer; and ()

(8) pH. ()

ii. Estimated daily maximum, daily average, and the source of that information for each outfall for all the conventional and nonconventional pollutants in Table IV of Appendix D to 40 CFR Part 122, if the applicant knows or has reason to believe any of the pollutants will be present or if any of the pollutants are limited by an effluent limitation guideline or new source performance standard either directly or indirectly through limitations on an indicator pollutant; ()

iii. Estimated daily maximum, daily average, and the source of that information for the following pollutants for each outfall, if the applicant knows or has reason to believe the pollutants will be present in the discharge from any outfall: ()

- (1) All pollutants in Table IV of Appendix D to 40 CFR Part 122; ()
- (2) The toxic metals, total cyanide, and total phenols listed in Table III of Appendix D to 40 CFR Part 122; ()
- (3) The organic toxic pollutants in Table II of Appendix D to 40 CFR Part 122 except bis (chloromethyl) ether, dichlorofluoromethane, and trichlorofluoromethane; however, this requirement is waived for: ()
 - (a) An applicant with expected gross sales of less than two hundred eighty-seven thousand three hundred dollars (\$287,300) per year in 2014 dollars for the next three (3) years (see also Subsection 105.07.o.ii.); or ()
 - (b) A coal mine with expected average production of less than one hundred thousand (100,000) tons of coal per year (see also Subsection 105.07.o.i.); ()
- iv. The information that 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) may be discharged if the applicant uses or manufactures one (1) of the following compounds, or if the applicant knows or has reason to believe that TCDD will or may be present in an effluent: ()
 - (1) 2,4,5-trichlorophenoxy acetic acid (2,4,5-T); Chemical Abstract Service (CAS) #93-76-5; ()
 - (2) 2-(2,4,5-trichlorophenoxy) propanoic acid (Silvex, 2,4,5-TP) (CAS #93-72-1); ()
 - (3) 2-(2,4,5-trichlorophenoxy) ethyl 2,2-dichloropropionate (Erbon) (CAS #136-25-4); ()
 - (4) o,o-dimethyl o-(2,4,5-trichlorophenyl) phosphorothioate (Ronnel) (CAS #299-84-3); ()
 - (5) 2,4,5-trichlorophenol (TCP) (CAS #95-95-4); or ()
 - (6) Hexachlorophene (HCP) (CAS #70-30-4); and ()
- v. The potential presence of any of the pollutants listed in Table V of Appendix D to 40 CFR Part 122 if the applicant believes these pollutants will be present in any outfall, except that quantitative estimates are not required unless they are already available at the time the applicant applies for the permit. ()
- c. No later than twenty-four (24) months after the commencement of discharge from the proposed facility, the applicant is required to complete and submit Items V and VI of EPA application Form 2C or the Department equivalent. The applicant need not complete those portions of Item V or the Department equivalent requiring tests already performed and reported under the discharge monitoring requirements of its permit. ()
- d. The effluent characteristics requirements in Subsections 105.08.b., c., and e. that an applicant must provide estimates of certain pollutants expected to be present do not apply to pollutants present in a discharge solely as a result of their presence in intake water. However, an applicant must report that a pollutant is present. For purposes of this subsection, net credits may be provided for the presence of pollutants in intake water if the requirements of Subsection 303.07 are met, and (except for discharge flow, temperature, and pH) all levels must be estimated as concentration and as total mass. ()
- e. The Department may waive the reporting requirements for any of the pollutants and parameters in Subsection 105.16.b. if the applicant requests a waiver with its application, or earlier, and demonstrates that information adequate to support issuance of the permit can be obtained through less stringent reporting requirements. ()

17. Application Requirements for Treatment Works Treating Domestic Sewage (TWTDS). All TWTDS with a currently effective NPDES or IPDES permit must submit a permit application at the time of the next IPDES permit renewal application, using Form 2S or another application form approved by the Department. New applicants must submit all information available at the time of permit application. The information may be provided

by referencing information previously submitted to the Department. ()

a. The Department may waive any requirement of this subsection if there is access to substantially identical information. The Department may also waive any requirement of this subsection that is not of material concern for a specific permit, if approved by the EPA Regional Administrator. The waiver request to the Regional Administrator must include the Department’s justification for the waiver. A Regional Administrator’s disapproval of a Department’s proposed waiver does not constitute final agency action, but does provide notice to the state and permit applicant(s) that EPA may object to any state-issued permit issued in the absence of the required information. ()

b. All applicants must submit the following information: ()

i. The name, mailing address, and location of the TWTDS for which the application is submitted; ()

ii. The name, mailing address, e-mail address, EIN or Department equivalent, and telephone number of the applicant and indication whether the applicant is the owner, operator, or both; ()

iii. Whether the facility is a Class I Sludge Management Facility; ()

iv. The design flow rate in million gallons per day (MGD); ()

v. The total population and equivalent dwelling units (EDU) served; and ()

vi. The TWTDS’s status as federal, state, private, public, or other entity. ()

c. All applicants must submit the facility’s NPDES or IPDES permit number, if applicable, and a listing of all other federal, state, and local permits or construction approvals received or applied for under any of the following programs: ()

i. Hazardous waste management program under IDAPA 58.01.05, “Rules and Standards for Hazardous Waste”; ()

ii. Underground injection control (UIC) program under the Idaho Department of Water Resources UIC program at IDAPA 37.03.03, “Rules and Minimum Standards for the Construction and Use of Injection Wells”; ()

iii. IPDES program under IDAPA 58.01.25, “Rules Regulating the Idaho Pollutant Discharge Elimination System Program”; ()

iv. Prevention of significant deterioration (PSD) program under IDAPA 58.01.01, “Rules for the Control of Air Pollution in Idaho”; ()

v. Nonattainment program under IDAPA 58.01.01, “Rules for the Control of Air Pollution in Idaho”; ()

vi. National emission standards for hazardous pollutants (NESHAPS) preconstruction approval under IDAPA 58.01.01, “Rules for the Control of Air Pollution in Idaho”; ()

vii. Dredge or fill permits under the Clean Water Act section 404; ()

viii. Sludge Management Program under IDAPA 58.01.16.650, “Wastewater Rules,” and Section 380 (Sewage Sludge) of these rules; and ()

ix. Other relevant environmental permits, programs or activities, including those subject to state jurisdiction, approval, and permits. ()

d. All applicants must identify any generation, treatment, storage, land application, or disposal of sewage sludge that occurs in Indian country. ()

e. All applicants must submit a topographic map (or other map if a topographic map is unavailable) extending one (1) mile beyond property boundaries of the facility and showing the following information: ()

i. All sewage sludge management facilities, including on-site treatment, storage, and disposal sites; and ()

ii. Wells, springs, and other surface water bodies that are within one-quarter ($\frac{1}{4}$) mile of the property boundaries and listed in public records or otherwise known to the applicant. ()

f. All applicants must submit a line drawing and/or a narrative description that identifies all sewage sludge management practices employed during the term of the permit, including all units used for collecting, dewatering, storing, or treating sewage sludge, the destination(s) of all liquids and solids leaving each such unit, and all processes used for pathogen reduction and vector attraction reduction. ()

g. The applicant must submit sewage sludge monitoring data for the pollutants for which limits in sewage sludge have been established in 40 CFR Part 503 for the applicant's use or disposal practices on the date of permit application. ()

i. The Department may require sampling for additional pollutants, as appropriate, on a case-by-case basis; ()

ii. Applicants must provide data from a minimum of three (3) samples taken within four and one-half ($4\frac{1}{2}$) years prior to the date of the permit application. Samples must be representative of the sewage sludge and should be taken at least one (1) month apart. Existing data may be used in lieu of sampling done solely for the purpose of this application; ()

iii. Applicants must collect and analyze samples in accordance with analytical methods approved under SW-846 (Test Methods for Evaluating Solid Waste, Physical/Chemical Methods) unless an alternative has been specified in an existing sewage sludge permit; and ()

iv. The monitoring data provided must include at least the following information for each parameter: ()

(1) Average monthly concentration for all samples (mg/kg dry weight), based upon actual sample values; ()

(2) The analytical method used; and ()

(3) The method detection level. ()

h. If the applicant is either the person who generates sewage sludge during the treatment of domestic sewage in a treatment works or the person who derives a material from sewage sludge, the following information must be provided: ()

i. If the applicant's facility generates sewage sludge, the total dry metric tons per three hundred sixty-five (365)-day period generated at the facility; ()

ii. If the applicant's facility receives sewage sludge from another facility, the following information for each facility from which sewage sludge is received: ()

(1) The name, mailing address, and location of the other facility; ()

(2) The total dry metric tons per three hundred sixty-five (365)-day period received from the other facility; and ()

(3) A description of any treatment processes occurring at the other facility, including blending activities and treatment to reduce pathogens or vector attraction characteristics; ()

iii. If the applicant's facility changes the quality of sewage sludge through blending, treatment, or other activities, the following information must be submitted: ()

(1) Whether the Class A pathogen reduction requirements in 40 CFR 503.32(a) or the Class B pathogen reduction requirements in 40 CFR 503.32(b) are met, and a description of any treatment processes used to reduce pathogens in sewage sludge; ()

(2) Whether any of the vector attraction reduction options of 40 CFR 503.33(b)(1) through (b)(8) are met, and a description of any treatment processes used to reduce vector attraction properties in sewage sludge; and ()

(3) A description of any other blending, treatment, or other activities that change the quality of sewage sludge; ()

iv. If sewage sludge from the applicant's facility meets the ceiling concentrations in 40 CFR 503.13(b)(1), the pollutant concentrations in 40 CFR 503.13(b)(3), the Class A pathogen requirements in 40 CFR 503.32(a), and one (1) of the vector attraction reduction requirements in 40 CFR 503.33(b)(1) through (b)(8), and if the sewage sludge is applied to the land, the applicant must provide the total dry metric tons per three hundred sixty-five (365)-day period of sewage sludge subject to this subsection that is applied to the land; ()

v. If sewage sludge from the applicant's facility is sold or given away in a bag or other container for application to the land, and the sewage sludge is not subject to Subsection 105.17.h.iv., the applicant must provide the following information: ()

(1) The total dry metric tons per three hundred sixty-five (365)-day period of sewage sludge subject to this subsection that is sold or given away in a bag or other container for application to the land; and ()

(2) A copy of all labels or notices that accompany the sewage sludge being sold or given away; and ()

vi. If sewage sludge from the applicant's facility is provided to another person who generates sewage sludge during the treatment of domestic sewage in a treatment works or a person who derives a material from sewage sludge, and the sewage sludge is not subject to Subsection 105.17.h.iv., the applicant must provide the following information for each facility receiving the sewage sludge: ()

(1) The name, e-mail address, and mailing address of the receiving facility; ()

(2) The total dry metric tons per three hundred sixty-five (365)-day period of sewage sludge subject to this subsection that the applicant provides to the receiving facility; ()

(3) A description of any treatment processes occurring at the receiving facility, including blending activities and treatment to reduce pathogens or vector attraction characteristic; ()

(4) A copy of the notice and necessary information that the applicant is required to provide the receiving facility under 40 CFR 503.12(g); and ()

(5) If the receiving facility places sewage sludge in bags or containers for sale or give-away to application to the land, a copy of any labels or notices that accompany the sewage sludge. ()

i. If sewage sludge from the applicant's facility is applied to the land in bulk form, and is not subject to Subsection 105.17.h.iv., v., or vi., the applicant must provide the following information: ()

i. The total dry metric tons per three hundred sixty-five (365)-day period of sewage sludge subject to

this subsection that is applied to the land; ()

ii. If any land application sites are located in states other than the state where the sewage sludge is prepared, a description of how the applicant will notify the permitting authority for the state(s) where the land application sites are located; ()

iii. The following information for each land application site that has been identified at the time of permit application: ()

(1) The name (if any), and location for the land application site; ()

(2) The site's latitude and longitude to the nearest second, and method of determination; ()

(3) A topographic map (or other map if a topographic map is unavailable) that shows the site's location; ()

(4) The name, mailing address, e-mail address, and telephone number of the site owner, if different from the applicant; ()

(5) The name, mailing address, e-mail address, and telephone number of the person who applies sewage sludge to the site, if different from the applicant; ()

(6) Whether the site is agricultural land, forest, a public contact site, or a reclamation site, as such site types are defined under 40 CFR 503.11; ()

(7) The type of vegetation grown on the site, if known, and the nitrogen requirement for this vegetation; ()

(8) Whether either of the vector attraction reduction options of 40 CFR 503.33(b)(9) or (b)(10) is met at the site, and a description of any procedures employed at the time of use to reduce vector attraction properties in sewage sludge; and ()

(9) Other information that describes how the site will be managed, as specified by the permitting authority. ()

iv. The following information for each land application site that has been identified at the time of permit application, if the applicant intends to apply bulk sewage sludge subject to the cumulative pollutant loading rates in 40 CFR 503.13(b)(2) to the site: ()

(1) Whether the applicant has contacted the permitting authority in the state where the bulk sewage sludge subject to 40 CFR 503.13(b)(2) will be applied, to ascertain whether bulk sewage sludge subject to 40 CFR 503.13(b)(2) has been applied to the site on or since July 20, 1993, and if so, the name of the permitting authority and the name, phone number, and e-mail address, if available, of a contact person at the permitting authority; ()

(2) Identification of facilities other than the applicant's facility that have sent, or are sending, sewage sludge subject to the cumulative pollutant loading rates in 40 CFR 503.13(b)(2) to the site since July 20, 1993, if, based on the inquiry in Subsection 105.17.i.iv(1) bulk sewage sludge subject to cumulative pollutant loading rates in 40 CFR 503.13(b)(2) has been applied to the site since July 20, 1993; ()

v. If not all land application sites have been identified at the time of permit application, the applicant must submit a land application plan that, at a minimum: ()

(1) Describes the geographical area covered by the plan; ()

(2) Identifies the site selection criteria; ()

(3) Describes how the site(s) will be managed; ()

(4) Provides for advance notice to the permit authority of specific land application sites and reasonable time for the permit authority to object prior to land application of the sewage sludge; and ()

(5) Provides for advance public notice of land application sites in the manner prescribed by state and local law. When state or local law does not require advance public notice, it must be provided in a manner reasonably calculated to apprise the general public of the planned land application. ()

j. If sewage sludge from the applicant's facility is placed on a surface disposal site, the applicant must provide the following information: ()

i. The total dry metric tons of sewage sludge from the applicant's facility that is placed on surface disposal sites per three hundred sixty-five (365)-day period; ()

ii. The following information for each surface disposal site receiving sewage sludge from the applicant's facility that the applicant does not own or operate: ()

(1) The site name or number, contact person, mailing address, e-mail address, and telephone number for the surface disposal site; and ()

(2) The total dry metric tons from the applicant's facility per three hundred sixty-five (365)-day period placed on the surface disposal site; ()

iii. The following information for each active sewage sludge unit at each surface disposal site that the applicant owns or operates: ()

(1) The name or number and the location of the active sewage sludge unit; ()

(2) The unit's latitude and longitude to the nearest second, and method of determination; ()

(3) If not already provided, a topographic map (or other map if a topographic map is unavailable) that shows the unit's location; ()

(4) The total dry metric tons placed on the active sewage sludge unit per three hundred sixty-five (365)-day period; ()

(5) The total dry metric tons placed on the active sewage sludge unit over the life of the unit; ()

(6) A description of any liner for the active sewage sludge unit, including whether it has a maximum permeability of 1×10^{-7} cm/sec; ()

(7) A description of any leachate collection system for the active sewage sludge unit, including the method used for leachate disposal, and any federal, state, and local permit number(s) for leachate disposal; ()

(8) If the active sewage sludge unit is less than one hundred fifty (150) meters from the property line of the surface disposal site, the actual distance from the unit boundary to the site property line; ()

(9) The remaining capacity (dry metric tons) for the active sewage sludge unit; ()

(10) The date on which the active sewage sludge unit is expected to close, if such a date has been identified; ()

(11) The following information for any other facility that sends sewage sludge to the active sewage sludge unit: ()

(a) The name, contact person, and mailing address of the facility; and ()

(b) Available information regarding the quality of the sewage sludge received from the facility, ()

including any treatment at the facility to reduce pathogens or vector attraction characteristics; ()

(12) Whether any of the vector attraction reduction options of 40 CFR 503.33(b)(9) through (b)(11) is met at the active sewage sludge unit, and a description of any procedures employed at the time of disposal to reduce vector attraction properties in sewage sludge; ()

(13) The following information, as applicable to any ground water monitoring occurring at the active sewage sludge unit: ()

(a) A description of any ground water monitoring occurring at the active sewage sludge unit; ()

(b) Any available ground water monitoring data, with a description of the well locations and approximate depth to ground water; ()

(c) A copy of any ground water monitoring plan that has been prepared for the active sewage sludge unit; and ()

(d) A copy of any certification that has been obtained from a qualified ground water scientist that the aquifer has not been contaminated; and ()

(14) If site-specific pollutant limits are being sought for the sewage sludge placed on this active sewage sludge unit, information to support such a request. ()

k. If sewage sludge from the applicant's facility is fired in a sewage sludge incinerator, the applicant must provide the following information: ()

i. The total dry metric tons of sewage sludge from the applicant's facility that is fired in sewage sludge incinerators per three hundred sixty-five (365)-day period; ()

ii. The following information for each sewage sludge incinerator firing the applicant's sewage sludge that the applicant does not own or operate: ()

(1) The name and/or number, contact person, mailing address, e-mail address, and telephone number of the sewage sludge incinerator; and ()

(2) The total dry metric tons from the applicant's facility per three hundred sixty-five (365)-day period fired in the sewage sludge incinerator; ()

iii. The following information for each sewage sludge incinerator that the applicant owns or operates: ()

(1) The name and/or number and the location of the sewage sludge incinerator; ()

(2) The incinerator's latitude and longitude to the nearest second, and method of determination; ()

(3) The total dry metric tons per three hundred sixty-five (365)-day period fired in the sewage sludge incinerator; ()

(4) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Beryllium in 40 CFR Part 61 will be achieved; ()

(5) Information, test data, and documentation of ongoing operating parameters indicating that compliance with the National Emission Standard for Mercury in 40 CFR Part 61 will be achieved; ()

(6) The dispersion factor for the sewage sludge incinerator, as well as modeling results and supporting documentation; ()

- (7) The control efficiency for parameters regulated in 40 CFR 503.43, as well as performance test results and supporting documentation; ()
- (8) Information used to calculate the risk specific concentration (RSC) for chromium, including the results of incinerator stack tests for hexavalent and total chromium concentrations, if the applicant is requesting a chromium limit based on a site-specific RSC value; ()
- (9) Whether the applicant monitors total hydrocarbons (THC) or Carbon Monoxide (CO) in the exit gas for the sewage sludge incinerator; ()
- (10) The type of sewage sludge incinerator; ()
- (11) The maximum performance test combustion temperature, as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies; ()
- (12) The following information on the sewage sludge feed rate used during the performance test: ()
- (a) Sewage sludge feed rate in dry metric tons per day; ()
- (b) Identification of whether the feed rate submitted is average use or maximum design; and ()
- (c) A description of how the feed rate was calculated; ()
- (13) The incinerator stack height in meters for each stack, including identification of whether actual or creditable stack height was used; ()
- (14) The operating parameters for the sewage sludge incinerator air pollution control device(s), as obtained during the performance test of the sewage sludge incinerator to determine pollutant control efficiencies; ()
- (15) Identification of the monitoring equipment in place, including (but not limited to) equipment to monitor the following: ()
- (a) Total hydrocarbons or Carbon Monoxide; ()
- (b) Percent Oxygen; ()
- (c) Percent moisture; and ()
- (d) Combustion temperature; and ()
- (16) A list of all air pollution control equipment used with this sewage sludge incinerator. ()
- I.** If sewage sludge from the applicant's facility is sent to a municipal solid waste landfill (MSWLF), the applicant must provide the following information for each MSWLF to which sewage sludge is sent: ()
- i. The name, contact person, mailing address, e-mail address location, and all applicable permit numbers of the MSWLF; ()
- ii. The total dry metric tons per three hundred sixty-five (365)-day period sent from this facility to the MSWLF; ()
- iii. A determination of whether the sewage sludge meets applicable requirements for disposal of sewage sludge in a MSWLF, including the results of the paint filter liquids test and any additional requirements that apply on a site-specific basis; and ()

iv. Information, if known, indicating whether the MSWLF complies with criteria set forth in 40 CFR Part 258. ()

m. All applicants must provide the name, mailing address, e-mail address, telephone number, and responsibilities of all contractors responsible for any operational or maintenance aspects of the facility related to sewage sludge generation, treatment, use, or disposal. ()

n. At the request of the Department, the applicant must provide any other information necessary to determine the appropriate standards for permitting under 40 CFR Part 503 and any other information necessary to assess the sewage sludge use and disposal practices, determine whether to issue a permit, or identify appropriate permit requirements. ()

o. TWTDS facilities using or disposing of sewage sludge to which a standard applicable to its sewage sludge use or disposal practices have been published must submit the following information on EPA Form 2S, Part I, or on the Department equivalent form: ()

i. The TWTDS's name, mailing address, location, and status as federal, state, private, public, or other entity; ()

ii. The applicant's name, address, e-mail address, telephone number, and ownership status; ()

iii. A description of the sewage sludge use or disposal practices. Unless the sewage sludge meets the requirements of Subsection 105.17.h.iv., the description must include the name and address of any facility where sewage sludge is sent for treatment or disposal, and the location of any land application sites; ()

iv. Annual amount of sewage sludge generated, treated, used or disposed (estimated dry weight basis); and ()

v. The most recent data the TWTDS may have on the quality of the sewage sludge. ()

18. Application Requirements for Municipal Separate Storm Sewer Discharges. The operator of a discharge from a large or medium municipal separate storm sewer or a municipal separate storm sewer that is designated by the Department under 40 CFR 122.26(a)(1)(v), may submit a jurisdiction-wide or system-wide permit application. Where more than one (1) public entity owns or operates a municipal separate storm sewer within a geographic area (including adjacent or interconnected municipal separate storm sewer systems), such operators may be a co-applicant to the same application. Permit applications for discharges from large and medium municipal storm sewers or municipal storm sewers designated under 40 CFR 122.26 (a)(1)(v) must include: ()

a. In Part 1 of the application ()

i. The applicants' name, address, e-mail address, EIN or Department equivalent, telephone number of contact person, ownership status and status as a state or local government entity; ()

ii. A description of existing legal authority to control discharges to the municipal separate storm sewer system. When existing legal authority is not sufficient to meet the criteria provided in Subsection 105.18.b.i., the description must list additional authorities as will be necessary to meet the criteria and include a schedule and commitment to seek such additional authority that will be needed to meet the criteria; ()

iii. A description of the historic use of ordinances, guidance or other controls which limited the discharge of non-storm water discharges to any POTW serving the same area as the municipal separate storm sewer system, include all of the following: ()

(1) A USGS seven point five (7.5) minute topographic map (or equivalent topographic map with a scale between one to ten thousand (1:10,000) and one to twenty-four thousand (1:24,000) if cost effective) extending one (1) mile beyond the service boundaries of the municipal storm sewer system covered by the permit application; ()

- (2) The location of known municipal storm sewer system outfalls discharging to waters of the United States; ()
- (3) A description of the land use activities (e.g. divisions indicating undeveloped, residential, commercial, agricultural and industrial uses) accompanied with estimates of population densities and projected growth for a ten (10) year period within the drainage area served by the separate storm sewer and an estimate of an average runoff coefficient for each land use type; ()
- (4) The location and a description of the activities of the facility of each currently operating or closed municipal landfill or other treatment, storage or disposal facility for municipal waste; ()
- (5) The location and the permit number of any known discharge to the municipal storm sewer that has been issued a NPDES or IPDES permit; ()
- (6) The location of major structural controls for storm water discharge (retention basins, detention basins, major infiltration devices, etc.); and ()
- (7) The identification of publicly owned parks, recreational areas, and other open lands. ()
- iv. A description of the discharge including: ()
- (1) Monthly mean rain and snow fall estimates (or summary of weather bureau data) and the monthly average number of storm events; ()
- (2) Existing quantitative data describing the volume and quality of discharges from the municipal storm sewer, including a description of the outfalls sampled, sampling procedures and analytical methods used; ()
- (3) A list of water bodies that receive discharges from the municipal separate storm sewer system, including downstream segments, lakes and estuaries, where pollutants from the system discharges may accumulate and cause water degradation and a brief description of known water quality impacts. At a minimum, the description of impacts must include a description of whether the water bodies receiving such discharges have been: ()
- (a) Assessed and reported in the Clean Water Act section 305(b) reports submitted by the Department, the basis for the assessment (evaluated or monitored), a summary of designated use support and attainment of Clean Water Act goals (fishable and swimmable waters), and causes of nonsupport of designated uses; ()
- (b) Listed under the Clean Water Act section 304(l)(1)(A)(i), 304(l)(1)(A)(ii), or 304(l)(1)(B) that is not expected to meet water quality standards or water quality goals; ()
- (c) Listed in state Nonpoint Source Assessments required by the Clean Water Act section 319(a), without additional action to control nonpoint sources of pollution, cannot reasonably be expected to attain or maintain water quality standards due to storm sewers, construction, highway maintenance and runoff from municipal landfills and municipal sludge adding significant pollution (or contributing to a violation of water quality standards); ()
- (d) Identified and classified according to eutrophic condition of publicly owned lakes listed in state reports required under the Clean Water Act section 314(a) (include the following: A description of those publicly owned lakes for which uses are known to be impaired, a description of procedures, processes and methods to control the discharge of pollutants from municipal separate storm sewers into such lakes, and a description of methods and procedures to restore the quality of such lakes); ()
- (e) Recognized by the applicant as highly valued or sensitive waters; ()
- (f) Defined by the state as wetlands; and ()
- (g) Found to have pollutants in bottom sediments, fish tissue, or biosurvey data. ()

(4) Results of a field screening analysis for illicit connections and illegal dumping for either selected field screening points or major outfalls covered in the permit application. At a minimum, a screening analysis includes a narrative description, for either each field screening point or major outfall, of visual observations made during dry weather periods. If any flow is observed, two (2) grab samples are to be collected during a twenty-four (24)-hour period with a minimum period of four (4) hours between samples. For all such samples, a narrative description of the color, odor, turbidity, the presence of an oil sheen or surface scum as well as any other relevant observations regarding the potential presence of non-storm water discharges or illegal dumping must be provided. In addition, a narrative description of the results of a field analysis using suitable methods to estimate pH, total chlorine, total copper, total phenol, and detergents (or surfactants) must be provided along with a description of the flow rate. Where the field analysis does not involve analytical methods approved under 40 CFR Part 136, the applicant must provide a description of the method used including the name of the manufacturer of the test method along with the range and accuracy of the test. Field screening points are either major outfalls or other outfall points (or any other point of access such as manholes) randomly located throughout the storm sewer system by placing a grid over a drainage system map and identifying those cells of the grid which contain a segment of the storm sewer system or major outfall. The field screening points are established using the following guidelines and criteria: ()

(a) Overlay a grid system consisting of perpendicular north-south and east-west lines spaced one-quarter (1/4) mile apart on a map of the municipal storm sewer system, creating a series of cells; ()

(b) Identify all cells that contain a segment of the storm sewer system; select one (1) field screening point in each cell; major outfalls may be used as field screening points; ()

(c) Field screening points should be located downstream of any sources of suspected illegal or illicit activity; ()

(d) Locate field screening points to the degree practicable at the farthest manhole or other accessible location downstream in the system, within each cell; however, safety of personnel and accessibility of the location should be considered in making this determination; ()

(e) Hydrological conditions, total drainage area of the site, population density of the site, traffic density, age of the structures or buildings in the area, history of the area, and land use types; ()

(f) For medium municipal separate storm sewer systems, no more than two hundred fifty (250) cells need to have identified field screening points; in large municipal separate storm sewer systems, no more than five hundred (500) cells need to have identified field screening points; cells established by the grid that contain no storm sewer segments will be eliminated from consideration; if fewer than two hundred fifty (250) cells in medium municipal sewers are created, and fewer than 500 in large systems are created by the overlay on the municipal sewer map, then all those cells which contain a segment of the sewer system are subject to field screening (unless access to the separate storm sewer system is impossible); and ()

(g) Large or medium municipal separate storm sewer systems which are unable to utilize the procedures described in Subsection 105.18.a.iv(4)(a) through (f), because a sufficiently detailed map of the separate storm sewer systems is unavailable, must field screen no more than five hundred (500) or two hundred fifty (250) major outfalls respectively (or all major outfalls in the system, if less). In such circumstances, the applicant must establish a grid system consisting of north-south and east-west lines spaced one-quarter (1/4) mile apart as an overlay to the boundaries of the municipal storm sewer system, thereby creating a series of cells. The applicant will then select major outfalls in as many cells as possible until at least five hundred (500) major outfalls (large municipalities) or two hundred fifty (250) major outfalls (medium municipalities) are selected; a field screening analysis must occur at these major outfalls; and ()

(5) Information and a proposed program to meet the requirements of Subsection 105.18.b.iii., including at least: the location of outfalls or field screening points appropriate for representative data collection under Subsection 105.18.b.iii(1), a description of why the outfall or field screening point is representative, the seasons during which sampling is intended, a description of the sampling equipment. The proposed location of outfalls or field screening points for such sampling should reflect water quality concerns (see Subsection 105.18.a.iv(3)) to the extent practicable; ()

v. A description of the existing management programs to control pollutants from the municipal separate storm sewer system including existing source controls and operation and maintenance measures for structural controls that are currently being implemented. Such controls may include, but are not limited to: procedures to control pollution resulting from construction activities; floodplain management controls; wetland protection measures; best management practices for new subdivisions; and emergency spill response programs. The description may address controls established under state law as well as local requirements; ()

vi. A description of the existing program to identify illicit connections to the municipal storm sewer system, that includes inspection procedures and methods for detecting and preventing illicit discharges, and describe areas where this program has been implemented; and ()

vii. A description of the financial resources currently available to the municipality to complete part 2 of the permit application. A description of the municipality's budget for existing storm water programs, including an overview of the municipality's financial resources and budget, including overall indebtedness and assets, and sources of funds for storm water programs. ()

b. In Part 2 of the application: ()

i. A demonstration that the applicant can operate pursuant to legal authority established by statute, ordinance, or series of contracts which authorizes or enables the applicant at a minimum to: ()

(1) Control through ordinance, permit, contract, order or similar means, the contribution of pollutants to the municipal storm sewer by storm water discharges associated with industrial activity and the quality of storm water discharged from sites of industrial activity; ()

(2) Prohibit through ordinance, order or similar means, illicit discharges to the municipal separate storm sewer; ()

(3) Control through ordinance, order or similar means the discharge to a municipal separate storm sewer of spills, dumping or disposal of materials other than storm water; ()

(4) Control through interagency agreements among co-applicants the contribution of pollutants from a portion of the municipal system to another portion of the municipal system; ()

(5) Require compliance with conditions in ordinances, permits, contracts or orders; and ()

(6) Carry out all inspection, surveillance, and monitoring procedures necessary to determine compliance and noncompliance with permit conditions including the prohibition on illicit discharges to the municipal separate storm sewer. ()

ii. The location of any major outfall that discharges to waters of the United States that was not reported under Subsection 105.18.a.iii(2). Provide an inventory, organized by watershed of the name and address, and a description (such as Standard Industrial Classification (SIC) codes) which best reflects the principal products or services provided by each facility which may discharge, to the municipal separate storm sewer, storm water associated with industrial activity; ()

iii. When quantitative data for a pollutant are required under Subsection 105.18.b.iii(1)(c), the applicant must collect a sample of effluent in accordance with Subsection 105.07.c. through 105.07.m. and analyze it for the pollutant in accordance with analytical methods approved under 40 CFR Part 136. When no analytical method is approved the applicant may use any suitable method but must provide a description of the method. The applicant must provide information characterizing the quality and quantity of discharges covered in the permit application, including: ()

(1) Quantitative data from representative outfalls designated by the Department developed as follows (based on information received in part 1 of the application. The Department will designate between five (5) and ten (10) outfalls or field screening points as representative of the commercial, residential and industrial land use activities

of the drainage area contributing to the system or, where there are less than five (5) outfalls covered in the application, the Department will designate all outfalls): ()

(a) For each outfall or field screening point designated under this subsection, samples must be collected of storm water discharges from three (3) storm events occurring at least one (1) month apart in accordance with the requirements at Subsection 105.07.c. through 105.07.m. (the Department may allow exemptions to sampling three (3) storm events when climatic conditions create good cause for such exemptions); ()

(b) A narrative description must be provided of the date and duration of the storm event(s) sampled, rainfall estimates of the storm event which generated the sampled discharge and the duration between the storm event sampled and the end of the previous measurable (greater than one-tenth (0.1) inch rainfall) storm event; ()

(c) For samples collected and described under Subsections 105.18.b.iii(1)(a) and (b), quantitative data will be provided for the organic pollutants listed in Table II and the pollutants listed in Table III (toxic metals, cyanide, and total phenols) of Appendix D of 40 CFR Part 122, and for the following pollutants: ()

- (i) Total suspended solids (TSS); ()
- (ii) Total dissolved solids (TDS); ()
- (iii) Chemical oxygen demand (COD); ()
- (iv) Five (5)-day biochemical oxygen demand (BOD5); ()
- (v) Oil and grease; ()
- (vi) Fecal coliform (including *E. coli*); ()
- (vii) Enterococci (previously known as fecal streptococcus); ()
- (viii) pH; ()
- (ix) Total Kjeldahl nitrogen; ()
- (x) Nitrate plus nitrite; ()
- (xi) Total ammonia plus organic nitrogen; ()
- (xii) Dissolved phosphorus; and ()
- (xiii) Total phosphorus; ()

(d) Additional limited quantitative data required by the Department for determining permit conditions (the Department may require that quantitative data be provided for additional parameters, and may establish sampling conditions such as the location, season of sample collection, form of precipitation (snow melt, rainfall) and other parameters necessary to insure representativeness); ()

(2) Estimates of the annual pollutant load of the cumulative discharges to waters of the United States from all identified municipal outfalls and the event mean concentration of the cumulative discharges to waters of the United States from all identified municipal outfalls during a storm event for BOD5, COD, TSS, dissolved solids, total nitrogen, total ammonia plus organic nitrogen, total phosphorus, dissolved phosphorus, cadmium, copper, lead, and zinc. Estimates must be accompanied by a description of the procedures for estimating constituent loads and concentrations, including any modelling, data analysis, and calculation methods; ()

(3) A proposed schedule to provide estimates for each major outfall identified in either Subsection 105.18.b.ii. or 105.18.a.iii(2) of the seasonal pollutant load and of the event mean concentration of a representative

storm for any constituent detected in any sample required under Subsection 105.18.b.iii(1); and ()

(4) A proposed monitoring program for representative data collection for the term of the permit that describes the location of outfalls or field screening points to be sampled (or the location of instream stations), why the location is representative, the frequency of sampling, parameters to be sampled, and a description of sampling equipment; ()

iv. A proposed management program covering the duration of the permit, that includes a comprehensive planning process involving public participation and where necessary intergovernmental coordination, to reduce the discharge of pollutants to the maximum extent practicable using management practices, control techniques and system, design and engineering methods, and such other provisions which are appropriate. The program must also include a description of staff and equipment available to implement the program. Separate proposed programs may be submitted by each co-applicant. Proposed programs may impose controls on a system wide basis, a watershed basis, a jurisdiction basis, or on individual outfalls. Proposed programs will be considered by the Department when developing permit conditions to reduce pollutants in discharges to the maximum extent practicable. Proposed management programs must describe priorities for implementing controls. Such programs must be based on: ()

(1) A description of structural and source control measures to reduce pollutants from runoff from commercial and residential areas that are discharged from the municipal storm sewer system that are to be implemented during the life of the permit, accompanied with an estimate of the expected reduction of pollutant loads and a proposed schedule for implementing such controls. At a minimum, the description must include: ()

(a) A description of maintenance activities and a maintenance schedule for structural controls to reduce pollutants (including floatables) in discharges from municipal separate storm sewers; ()

(b) A description of planning procedures including a comprehensive master plan to develop, implement and enforce controls to reduce the discharge of pollutants from municipal separate storm sewers which receive discharges from areas of new development and significant redevelopment. Such plan must address controls to reduce pollutants in discharges from municipal separate storm sewers after construction is completed (controls to reduce pollutants in discharges from municipal separate storm sewers containing construction site runoff are addressed in Subsection 105.18.b.iv(4)); ()

(c) A description of practices for operating and maintaining public streets, roads and highways and procedures for reducing the impact on receiving waters of discharges from municipal storm sewer systems, including pollutants discharged as a result of deicing activities; ()

(d) A description of procedures to assure that flood management projects assess the impacts on the water quality of receiving water bodies and that existing structural flood control devices have been evaluated to determine if retrofitting the device to provide additional pollutant removal from storm water is feasible; ()

(e) A description of a program to monitor pollutants in runoff from operating or closed municipal landfills or other treatment, storage, or disposal facilities for municipal waste that identifies priorities and procedures for inspections and establishing and implementing control measures for such discharges (this program can be coordinated with the program developed under Subsection 105.18.b.iv(3)); and ()

(f) A description of a program to reduce to the maximum extent practicable, pollutants in discharges from municipal separate storm sewers associated with the application of pesticides, herbicides, and fertilizer which will include, as appropriate, controls such as educational activities, permits, certifications and other measures for commercial applicators and distributors, and controls for application in public right-of-ways and at municipal facilities; ()

(2) A description of a program, including a schedule, to detect and remove (or require the discharger to the municipal separate storm sewer to obtain a separate IPDES permit for) illicit discharges and improper disposal into the storm sewer. The proposed program must include: ()

(a) A description of a program, including inspections, to implement and enforce an ordinance, orders

or similar means to prevent illicit discharges to the municipal separate storm sewer system. This program description must address all types of illicit discharges; however, the following categories of non-storm water discharges or flows must be addressed where such discharges are identified by the municipality as sources of pollutants to waters of the United States: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration (as defined in Section 010) to separate storm sewers, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water (program descriptions must address discharges or flows from firefighting only where such discharges or flows are identified as significant sources of pollutants to waters of the United States); ()

(b) A description of procedures to conduct on-going field screening activities during the life of the permit, including areas or locations that will be evaluated by such field screens; ()

(c) A description of procedures to be followed to investigate portions of the separate storm sewer system that, based on the results of the field screen, or other appropriate information, indicate a reasonable potential of containing illicit discharges or other sources of non-storm water (such procedures may include: sampling procedures for constituents such as fecal coliform (including *E. coli*), enterococci (previously known as fecal streptococcus), surfactants (MBAS), residual chlorine, fluorides and potassium; testing with fluorometric dyes; or conducting in storm sewer inspections where safety and other considerations allow. Such description must include the location of storm sewers that have been identified for such evaluation); ()

(d) A description of procedures to prevent, contain, and respond to spills that may discharge into the municipal separate storm sewer; ()

(e) A description of a program to promote, publicize, and facilitate public reporting of the presence of illicit discharges or water quality impacts associated with discharges from municipal separate storm sewers; ()

(f) A description of educational activities, public information activities, and other appropriate activities to facilitate the proper management and disposal of used oil and toxic materials; and ()

(g) A description of controls to limit infiltration of seepage from municipal sanitary sewers to municipal separate storm sewer systems where necessary; ()

(3) A description of a program to monitor and control pollutants in storm water discharges to municipal systems from municipal landfills, hazardous waste treatment, disposal and recovery facilities, industrial facilities that are subject to section 313 of title III of the Superfund Amendments and Reauthorization Act of 1986 (SARA), and industrial facilities that the municipal permit applicant determines are contributing a substantial pollutant loading to the municipal storm sewer system. The program must: ()

(a) Identify priorities and procedures for inspections and establishing and implementing control measures for such discharges; and ()

(b) Describe a monitoring program for storm water discharges associated with the industrial facilities identified in Subsection 105.18.b.iv(3), to be implemented during the term of the permit, including the submission of quantitative data on the following constituents: any pollutants limited in effluent guidelines subcategories, where applicable; any pollutant listed in an existing NPDES or IPDES permit for a facility; oil and grease, COD, pH, BOD5, TSS, total phosphorus, total Kjeldahl nitrogen, nitrate plus nitrite nitrogen, and any information on discharges required under Subsections 105.07.j. through l.; ()

(4) A description of a program to implement and maintain structural and non-structural best management practices to reduce pollutants in storm water runoff from construction sites to the municipal storm sewer system that includes: ()

(a) A description of procedures for site planning which incorporate consideration of potential water quality impacts; ()

- (b) A description of requirements for nonstructural and structural best management practices; ()
- (c) A description of procedures for identifying priorities for inspecting sites and enforcing control measures which consider the nature of the construction activity, topography, and the characteristics of soils and receiving water quality; and ()
- (d) A description of appropriate educational and training measures for construction site operators; ()
- v. Estimated reductions in loadings of pollutants from discharges of municipal storm sewer constituents from municipal storm sewer systems expected as the result of the municipal storm water quality management program. The assessment must also identify known impacts of storm water controls on ground water; ()
- vi. For each fiscal year to be covered by the permit, a fiscal analysis of the necessary capital and operation and maintenance expenditures necessary to accomplish the activities of the programs under Subsections 105.18.b.iii. and iv. Such analysis must include a description of the source of funds that are proposed to meet the necessary expenditures, including legal restrictions on the use of such funds; ()
- vii. Where more than one (1) legal entity submits an application, the application must contain a description of the roles and responsibilities of each legal entity and procedures to ensure effective coordination; and ()
- viii. Where requirements under Subsections 105.18.a.iv(5), 105.18.b.ii., 105.18.b.iii.(2), and 105.18.b.iv. are not practicable or are not applicable, the Department may exclude any operator of a discharge from a municipal separate storm sewer which is designated under 40 CFR 122.26(a)(1)(v), (b)(4)(ii) or (b)(7)(ii) from such requirements. The Department must not exclude the operator of a discharge from a municipal separate storm sewer identified in Appendix F, G, H or I of 40 CFR Part 122, from any of the permit application requirements under this subsection except where authorized under this section. ()

19. Application Requirements for Industrial and Construction Storm Water Discharges.
Application requirements for storm water discharges associated with industrial activity and storm water discharges associated with small construction activity. ()

a. Dischargers of storm water associated with industrial activity and with small construction activity are required to apply for an individual permit or seek coverage under a promulgated storm water general permit. Facilities that are required to obtain an individual permit or any discharge of storm water which the Department is evaluating for designation (see Section 130, General Permits) under 40 CFR 122.26(a)(1)(v) and is not a municipal storm sewer, must submit an IPDES application in accordance with the requirements of Section 105 (Application for an Individual IPDES Permit) as modified and consistent with this subsection. ()

b. Except as provided in Subsections 105.19.c. through e., the operator of a storm water discharge associated with industrial activity subject to this section must provide: ()

i. A site map showing topography (or indicating the outline of drainage areas served by the outfall(s) covered in the application if a topographic map is unavailable) of the facility including: ()

(1) Each of its drainage and discharge structures; ()

(2) The drainage area of each storm water outfall; ()

(3) Paved areas and buildings within the drainage area of each storm water outfall, each past or present area used for outdoor storage or disposal of significant materials, each existing structural control measure to reduce pollutants in storm water runoff, materials loading and access areas, areas where pesticides, herbicides, soil conditioners and fertilizers are applied, each of its hazardous waste treatment, storage or disposal facilities (including each area not required to have a Resource Conservation and Recovery Act permit which is used for accumulating hazardous waste under 40 CFR 262.34); ()

- (4) Each well where fluids from the facility are injected underground; and ()
- (5) Springs, and other surface water bodies which receive storm water discharges from the facility; ()
- ii. An estimate of the area of impervious surfaces (including paved areas and building roofs) and the total area drained by each outfall (within a mile radius of the facility) and a narrative description of the following: ()
 - (1) Significant materials that in the three (3) years prior to the submittal of this application have been treated, stored, or disposed in a manner to allow exposure to storm water; ()
 - (2) Method of treatment, storage or disposal of such materials; materials management practices employed, in the three (3) years prior to the submittal of this application, to minimize contact by these materials with storm water runoff; ()
 - (3) Materials loading and access areas; ()
 - (4) The location, manner and frequency in which pesticides, herbicides, soil conditioners and fertilizers are applied; ()
 - (5) The location and a description of existing structural and non-structural control measures to reduce pollutants in storm water runoff; and ()
 - (6) A description of the treatment the storm water receives, including the ultimate disposal of any solid or fluid wastes other than by discharge; ()
- iii. A certification that all outfalls containing storm water discharges associated with industrial activity have been tested or evaluated for the presence of non-storm water discharges which are not covered by an IPDES permit, including a description of the method used, the date of any testing, and the on-site drainage points that were directly observed during a test. Tests for such non-storm water discharges may include smoke tests, fluorometric dye tests, analysis of accurate schematics, as well as other appropriate tests.; ()
- iv. Existing information regarding significant leaks or spills of toxic or hazardous pollutants at the facility that have taken place within the three (3) years prior to the submittal of this application; ()
- v. Quantitative data based on samples collected during storm events and collected in accordance with Subsection 105.07 from all outfalls containing a storm water discharge associated with industrial activity for the following parameters: ()
 - (1) Any pollutant limited in an effluent guideline to which the facility is subject; ()
 - (2) Any pollutant listed in the facility's NPDES or IPDES permit for its process wastewater (if the facility is operating under an existing NPDES or IPDES permit); ()
 - (3) Oil and grease, pH, BOD5, COD, TSS, total phosphorus, total Kjeldahl nitrogen, and nitrate plus nitrite nitrogen; ()
 - (4) Any information on the discharge required under Subsections 105.07.j. through l.; ()
 - (5) Flow measurements or estimates of the flow rate, and the total amount of discharge for the storm event(s) sampled, and the method of flow measurement or estimation; and ()
 - (6) The date and duration (in hours) of the storm event(s) sampled, rainfall measurements or estimates of the storm event (in inches) which generated the sampled runoff and the duration (in hours) between the storm event sampled and the end of the previous measurable (greater than one-tenth (0.1) inch rainfall) storm event; ()

vi. Operators of a discharge which is composed entirely of storm water are exempt from the requirements of Subsections 105.07.b., 105.07.a.i(2) through (5), 105.07.a.ii., 105.07.a.iii., 105.07.g., 105.07.h., 105.07.i., and 105.07.m.; and ()

vii. Operators of new sources or new discharges (as defined in Section 010, Definitions) which are composed in part or entirely of storm water must include estimates for the pollutants or parameters listed in Subsection 105.19.b.v. instead of actual sampling data, along with the source of each estimate. Operators of new sources or new discharges composed in part or entirely of storm water must provide quantitative data for the parameters listed in Subsection 105.19.b.v. within two (2) years after commencement of discharge, unless such data has already been reported under the monitoring requirements of the IPDES permit for the discharge. Operators of a new source or new discharge which is composed entirely of storm water are exempt from the requirements of Subsections 105.16.a.iii.(2) and (3), and 105.16.b. ()

c. An operator of an existing or new storm water discharge that is associated with industrial activity solely under 40 CFR 122.26(b)(14)(x) or is associated with small construction activity solely under 40 CFR 122.26 (b)(15), is exempt from the requirements of Subsection 105.07 and Subsection 105.19.b. Such operator must provide a narrative description of: ()

i. The location (including a map) and the nature of the construction activity; ()

ii. The total area of the site and the area of the site that is expected to undergo excavation during the life of the permit; ()

iii. Proposed measures, including best management practices, to control pollutants in storm water discharges during construction, including a brief description of applicable state and local erosion and sediment control requirements; ()

iv. Proposed measures to control pollutants in storm water discharges that will occur after construction operations have been completed, including a brief description of applicable state or local erosion and sediment control requirements; ()

v. An estimate of the runoff coefficient of the site and the increase in impervious area after the construction addressed in the permit application is completed, the nature of fill material and existing data describing the soil or the quality of the discharge; and ()

vi. The name of the receiving water. ()

d. The operator of an existing or new discharge composed entirely of storm water from an oil or gas exploration, production, processing, or treatment operation, or transmission facility is not required to submit a permit application in accordance with Subsection 105.19.b., unless the facility: ()

i. Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 117.21 or 40 CFR 302.6 at any time since November 16, 1987; or ()

ii. Has had a discharge of storm water resulting in the discharge of a reportable quantity for which notification is or was required pursuant to 40 CFR 110.6 at any time since November 16, 1987; or ()

iii. Contributes to a violation of a water quality standard. ()

e. The operator of an existing or new discharge composed entirely of storm water from a mining operation is not required to submit a permit application unless the discharge has come into contact with, any overburden, raw material, intermediate products, finished product, byproduct or waste products located on the site of such operations. ()

f. Applicants must provide such other information the Department may reasonably require under

Subsection 105.07.o. to determine whether to issue a permit and may require any facility subject to Subsection 105.19.c. to comply with Subsection 105.19.b. ()

106. INDIVIDUAL PERMIT APPLICATION REVIEW.

01. Completeness Criteria. The Department will not begin processing or issue an individual IPDES permit application before receiving a complete application. An application is complete when an application form and any supplemental information are completed and submitted to the Department's satisfaction. The Department will not consider a permit application to be complete until all applicable fees required under Section 110 (Permit Fee Schedule for IPDES Permitted Facilities) are paid. ()

02. Sufficiently Sensitive Methods. Except as specified in Subsection 106.02.c., a permit application shall not be considered complete unless all required quantitative data are collected in accordance with sufficiently sensitive analytical methods approved under 40 CFR Part 136 or required under 40 CFR Parts 400 through 471 and 501 through 503. ()

a. A method approved under 40 CFR Part 136 or required under 40 CFR Parts 400 through 471 and 501 through 503 is "sufficiently sensitive" when: ()

i. The method minimum level (ML) is at or below the level of the applicable water quality criterion for the measured pollutant or pollutant parameter; or ()

ii. The method ML is above the applicable water quality criterion, but the amount of the pollutant or pollutant parameter in a facility's discharge is high enough that the method detects and quantifies the level of the pollutant or pollutant parameter in the discharge; or ()

iii. The method has the lowest ML of the analytical methods approved under 40 CFR Part 136 or required under 40 CFR Parts 400 through 471 and 501 through 503 for the measured pollutant or pollutant parameter. ()

b. For Subsection 106.02.a., consistent with 40 CFR Part 136, applicants have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of "sufficiently sensitive," the analytical results are not consistent with the QA/QC specifications for that method, then the Department may determine that the method is not performing adequately and the applicant should select a different method from the remaining EPA-approved methods that is sufficiently sensitive consistent with Subsection 106.02.a. Where no other EPA-approved methods exist, the applicant should select a method consistent with Subsection 106.02.c. ()

c. When there is no analytical method that has been approved under 40 CFR Part 136, required under 40 CFR Parts 400 through 471 and 501 through 503, and is not otherwise required by the Department, the applicant may use any suitable method but shall provide a description of the method. When selecting a suitable method, other factors such as a method's precision, accuracy, or resolution, may be considered when assessing the performance of the method. ()

03. Independence. The Department shall judge the completeness of any IPDES permit application independently of any other permit application or permit. ()

04. Schedule. The Department will notify an applicant in writing whether the application is deemed complete for purposes of this section within: ()

a. Thirty (30) days if the application is for a new source or new discharger under the IPDES program, or ()

b. Sixty (60) days if the application is for an existing source or sludge-only facility. ()

05. Additional Information. Notification that an application is complete does not preclude the

Department from requiring the applicant submit additional information for the Department's use in processing the application. This additional information may only be requested when necessary to clarify, modify, or supplement previously submitted material. ()

a. Requests for additional information will not render an application incomplete. ()

b. If the Department decides that a site visit is necessary for any reason in connection with the processing of an application, the Department shall notify the applicant and a date shall be scheduled. Failure to schedule or refusal of a requested site visit are grounds for permit denial. ()

c. The applicant's failure or refusal to correct deficiencies, or supply requested information may result in permit denial, and appropriate enforcement actions may be initiated, if warranted. ()

06. Incomplete Due to Waiver Denial. The Department will not consider a permit application to be complete if the Department waived application requirements under Subsection 105.11 or 105.17 and the EPA has disapproved the waiver. ()

07. Impact of Waiver Delay. If a person required to reapply for a permit submits a waiver request to the Department more than two hundred ten (210) days before an existing permit expires, and the EPA does not disapprove the waiver request one hundred eighty-one (181) days before the permit expires, the Department will consider the permit application to be complete without the information that is the subject of the waiver request. ()

08. Application Completeness Date. The completeness date of an application is the date on which the Department notifies the applicant that the application is complete. ()

107. DECISION PROCESS.

After the Department has determined that a permit application is complete the Department will decide whether to tentatively deny the application, or prepare an IPDES draft permit. ()

01. Application Denial. If the Department decides to tentatively deny the application: ()

a. A notice of intent to deny the permit application shall be issued. A notice of intent to deny the permit application is a type of draft permit which follows the same procedures as any draft permit and shall be made available for public comment, and the Department shall give notice of opportunity for a public meeting, as specified in Section 109 (Public Notification and Comment); ()

b. The Department shall generate a response to public comment; and ()

c. Issue a final decision. The final decision may: ()

i. Be to withdraw the notice of intent to deny the application, and proceed to prepare a draft permit and fact sheet as defined in Section 108 (Draft Permit and Fact Sheet); or ()

ii. Confirm the decision to deny the application. ()

d. The applicant may appeal the final decision to deny the application by adhering to the requirements of Section 204 (Appeals Process). ()

02. Draft Permit. If the Department decides to generate a draft permit and fact sheet it will comply with Section 108 (Draft Permit and Fact Sheet). ()

a. Upon completion of the draft permit and fact sheet the Department shall issue a public notification as required in Subsection 109.01. ()

b. An opportunity for the public to comment and request a public meeting shall be provided. ()

c. The Department shall generate a response to public comment as stipulated in Subsection 109.03. ()

()
03. Proposed Permit. After the close of the public comment period on a draft permit, the Department will make appropriate changes in response to comments, and generate a proposed permit and fact sheet. ()

04. Final Permit. After the close of the public comment period on a draft permit, and after receipt of comments on the proposed permit, if any, from EPA, the Department shall issue a final permit decision and fact sheet. A final permit decision means a final decision to issue, deny, modify, revoke and reissue, or terminate a permit. ()

a. The Department shall notify the applicant and each person who has submitted written comments or requested notice of the final permit decision. ()

b. A final permit decision shall become effective twenty-eight (28) days after the service of notice of the decision unless: ()

i. A later effective date is specified in the decision; or ()

ii. A Petition for Review is filed with the Department as specified in Section 204 (Appeals Process). ()

108. DRAFT PERMIT AND FACT SHEET.

01. Draft Permit. ()

a. If the Department decides to prepare a draft permit, it shall contain the following information: ()

i. All conditions established under Section 300 (Conditions Applicable to All Permits); ()

ii. All conditions for specific categories established under Section 301 (Permit Conditions for Specific Categories) and 40 CFR 122.42(e). ()

iii. All conditions established under Section 302 (Establishing Permit Provisions); ()

iv. All conditions established under Section 303 (Calculating Permit Provisions); ()

v. All monitoring requirements established under Section 304 (Monitoring and Reporting Requirements); ()

vi. Schedules of compliance established under Section 305 (Compliance Schedules); and ()

vii. Any variances that are approved. ()

b. General and individual proposed permits shall be available to the EPA Region 10 Administrator for comment as specified in Subsections 107.03 (Proposed Permit) and 107.04 (Final Permit). ()

02. Fact Sheets. ()

a. A fact sheet containing the information required in Subsection 108.02.b. must accompany the draft permit prepared for: ()

i. A major IPDES facility or activity; ()

ii. A Class I sludge management facility; ()

- iii. An IPDES general permit; ()
- iv. A permit that incorporates a variance or requires an explanation under Subsection 108.02.b.ix. through 108.02.b.x.; ()
- v. A permit that includes a sewage sludge land application plan under 40 CFR 501.15(a)(2)(ix); and ()
- vi. A permit that the Department finds is the subject of wide-spread public interest or raises major issues. ()
- b.** A fact sheet must briefly set out the principal facts and the significant factual, legal, methodological, and policy questions considered in preparing the draft permit and must include, if applicable, the following information: ()
 - i. A brief description of the type of facility or activity that is the subject of the draft permit; ()
 - ii. The type and quantity of wastes, fluids, or pollutants that are proposed to be or are being treated, stored, disposed of, injected, emitted, or discharged; ()
 - iii. A brief summary of the basis for the draft permit conditions, including references to applicable statutes or regulations and appropriate supporting references to the administrative record; ()
 - iv. Reasons for the Department’s tentative decision on any requested variances or alternatives to required standards; ()
 - v. A description of the procedures for reaching a final decision on the draft permit, including: ()
 - (1) The beginning and ending dates of the comment period under Subsection 109.02 and the address where comments should be submitted; ()
 - (2) The procedure for requesting a public meeting and the nature of that meeting; and ()
 - (3) Any other procedures by which the public may participate in the final decision; ()
 - vi. The name and telephone number of a person to contact for additional information; ()
 - vii. The justification for waiver of any application requirements under Section 105 (Application for an Individual IPDES Permit) for new and existing POTWs; ()
 - viii. Any calculations or other necessary explanation of the derivation of specific effluent limitations and conditions, including a citation to the applicable effluent limitation guideline or performance standard as required by Section 302 (Establishing Permit Provisions), and reasons why the effluent limitations and conditions are applicable, or an explanation of how any alternate effluent limitation was developed; ()
 - ix. If applicable, an explanation of why the draft permit contains the following conditions or waivers: ()
 - (1) Limitations to control toxic pollutants under Subsection 302.07; ()
 - (2) Limitations on internal waste streams under Section 304 (Monitoring and Reporting Requirements); ()
 - (3) Limitations on indicator pollutants under 40 CFR 125.3(g); ()
 - (4) Limitations established on a case-by-case basis under 40 CFR 125.3 (c)(2) or (c)(3) or pursuant to the Clean Water Act section 405(d)(4); ()

- (5) Limitations to meet the criteria for permit issuance under Subsection 103.07; or ()
- (6) Waivers from monitoring requirements granted under Subsection 302.03; ()
- x. For a draft permit for a treatment works owned by a person other than a state or municipality, an explanation of the Department’s decision on regulation of users under Subsection 302.15; ()
- xi. If appropriate, a sketch or detailed description of the location of the discharge or regulated activity described in the application; and ()
- xii. For permits that include a sewage sludge land application plan under 40 CFR 501.15(a)(2)(ix), a brief description of how each of the required elements of the land application plan are addressed in the permit. ()

109. PUBLIC NOTIFICATION AND COMMENT.

- 01. Public Notification.** ()
- a.** The Department will give notice to the public that: ()
 - i. A draft permit has been prepared under Subsection 108.01; ()
 - ii. The Department intends to deny a permit application under Subsection 107.01; ()
 - iii. A public meeting is scheduled; or ()
 - iv. An IPDES new source determination has been made. ()
- b.** A public notice may describe more than one (1) permit or permit action. ()
- c.** The Department will allow at least thirty (30) days for public comment on the items in the notice, and will provide at least thirty (30) days’ notice before the public meeting. Notice of the draft permit and the meeting may be combined and given at the same time. ()
- d.** Public notice that a draft permit has been prepared, and any public meeting on the draft permit must be given by the following methods: ()
 - i. By mailing a copy of the notice to the following persons, unless any person entitled to receive notice under this subsection waives that person’s right to receive notice for any classes and categories of permits: ()
 - (1) The applicant, unless there is no applicant for an IPDES general permit; ()
 - (2) Any other agency (including EPA when the draft permit is prepared by the state) that the Department knows has issued or is required to issue a permit for the same facility or activity under the following laws and programs: ()
 - (a) Resource Conservation and Recovery Act, under IDAPA 58.01.05, “Rules and Standards for Hazardous Waste”; ()
 - (b) Underground Injection Control (UIC) Program under Idaho Department of Water Resources as authorized under Idaho Code Title 42 Chapter 39 and regulated under IDAPA 37.03.03, “Rules and Minimum Standards for the Construction and Use of Injection Wells”; ()
 - (c) Clean Air Act, under IDAPA 58.01.01, “Rules for the Control of Air Pollution in Idaho”; ()

- (d) Idaho Pollution Discharge Elimination System Program, under IDAPA 58.01.25, “Rules Regulating the Idaho Pollutant Discharge Elimination System Program”; or ()
- (e) Sludge Management Program, under IDAPA 58.01.16.650, “Wastewater Rules”; and ()
- (f) Dredge and Fill Permit Program (Clean Water Act section 404); ()
- (3) Affected federal and state agencies with jurisdiction over fish, shellfish, wildlife, and other natural resources, state historic preservation officers, and any affected Indian tribe; ()
- (4) Any state agency responsible for plan development under the Clean Water Act sections 208(b)(2), 208(b)(4), or 303(e), and the United States Army Corps of Engineers, the United States Fish and Wildlife Service, and the National Marine Fisheries Service; ()
- (5) Any user identified in the permit application of a privately owned treatment works; ()
- (6) Persons on a mailing list developed by: ()
- (a) Recording those who request in writing to be on the list; ()
- (b) Soliciting persons for area lists from participants in past permit proceedings in that area; and ()
- (c) Publishing notice of the opportunity to be on the mailing list on the Department’s website and through periodic publication in the local press and in regional and state-funded newsletters, environmental bulletins, state law journals or similar publications. The Department may update the mailing list from time to time by requesting written indication of continued interest from those listed, and may delete from the list the name of any person who fails to respond to the Department’s request; ()
- (7) Any unit of local government having jurisdiction over the area where the facility is proposed to be located; and ()
- (8) Each state agency having any authority under state law with respect to the construction or operation of the facility; ()
- ii. For a major facility permit, a general permit, and a permit that includes sewage sludge land application plans, by publishing a notice in a daily or weekly newspaper within the area affected by the facility or activity; and ()
- iii. By any other method reasonably calculated to give actual notice of the action in question to the persons potentially affected by it, including press releases or use of any other forum or media to elicit public participation. For IPDES major permits and general permits, in lieu of the requirement for publication of a notice in a daily or weekly newspaper, the Department may publish all notices of activities described in Subsection 109.01.a. to the Department’s website. If the Department selects this option for a draft permit, in addition to meeting the requirements in Subsection 109.01.e., the Department will post the draft permit and fact sheet on the website for the duration of the public comment period. The Department will ensure the methods of public notice effectively inform all interested communities and allow access to the permitting process for those seeking to participate. ()
- e. A public notice issued under this subsection must contain at least the following information: ()
- i. Name and address of the office processing the permit action for which notice is being given and where comments may be submitted; ()
- ii. Name and address of the permittee or permit applicant and, if different, of the facility or activity regulated by the permit, except in the case of IPDES draft general permits; ()
- iii. A brief description of the business conducted at the facility or activity described in the permit

application, or for general permits when there is no application, in the draft permit; ()

iv. Name, address, and telephone number of a person from whom interested persons may obtain further information, including copies of the draft permit or draft general permit, fact sheet, and the application; ()

v. A brief description of the comment and public meeting procedures required by this subsection and the time and place of any meeting that will be held; if no meeting has already been scheduled, a statement of procedures to request a meeting and other procedures by which the public may participate in the final permit decision; ()

vi. A general description of the location of each existing or proposed discharge point and the name of the receiving water; ()

vii. The sludge use and disposal practices and the location of each sludge TWTDS and use or disposal sites known at the time of permit application; ()

viii. A description of requirements applicable to cooling water intake structures under the Clean Water Act section 316(b), in accordance with 40 CFR 125.80 through 89, 125.90 through 99, and 125.130 through 139; and ()

ix. Directions to the Department’s website where interested parties can obtain copies of the draft permit, fact sheet, and the permit application, if any; and ()

f. In addition to the information required by Subsection 109.01.e., the public notice for a draft permit for a discharge for which a request has been filed under the Clean Water Act section 316(a) must include: ()

i. A statement that the thermal component of the discharge is subject to effluent limitations under the Clean Water Act sections 301 or 306, and a brief description, including a quantitative statement, of the thermal effluent limitations proposed under the Clean Water Act sections 301 or 306; ()

ii. A statement that a request has been filed under the Clean Water Act section 316(a), that alternative less stringent effluent limitations may be imposed on the thermal component of the discharge under the Clean Water Act section 316(a), and a brief description, including a quantitative statement, of the alternative effluent limitations, if any, included in the request; and ()

iii. If the applicant has filed an early screening request under 40 CFR 125.72 for a variance under the Clean Water Act section 316(a), a statement that the applicant has submitted that early screening request. ()

g. In addition to the general public notice described in Subsection 109.01.e., the public notice of a meeting under this section must contain the following information: ()

i. Reference to the date of previous public notices relating to the permit; ()

ii. Date, time, and place of the meeting; and ()

iii. A brief description of the nature and purpose of the meeting, including the applicable rules and procedures. ()

h. The Department will mail a copy of the general public notice described in Subsection 109.01.e. to all persons identified in Subsections 109.01.d.i(1), (2), (3), and (4). ()

i. The Department will hold a public meeting whenever the Department finds, on the basis of requests, a significant degree of public interest in a draft permit. The Department may also hold a public meeting if a meeting might clarify one (1) or more issues involved in the permit decision or for other good reason in the Department’s discretion. ()

02. Public Comment. ()

a. During the public comment period, any interested person may submit written comments on the draft permit. Written comments must be submitted to the person identified in the notice and as specified in Subsection 109.01.e. ()

b. During the public comment period, any interested person may request a public meeting if no public meeting has been scheduled. The Department will schedule and hold a public meeting if the Department determines that significant public interest exists in the draft permit. ()

i. A request for a public meeting must be in writing and be submitted to the Department within fourteen (14) days after the date of the public notice required by Subsection 109.01. ()

ii. If a public meeting is held for the purpose of receiving comments, the Department will make an audio recording or hire a court reporter to record the meeting and will prepare a transcript of the meeting if an appeal is filed. ()

c. If, during the comment period for an IPDES draft permit, the district engineer of the United States Army Corps of Engineers advises the Department in writing that anchorage and navigation of any of the waters of the United States would be substantially impaired by the granting of a permit, the Department will deny the permit and notify the applicant of the denial. If the district engineer advises the Department that imposing specified conditions upon the permit is necessary to avoid any substantial impairment of anchorage or navigation, the Department will include the specified conditions in the permit. Review or appeal of denial of a permit or of conditions specified by the district engineer must be sought through the applicable procedures of the United States Army Corps of Engineers and not through the state procedures. If a court of competent jurisdiction stays the conditions or if applicable procedures of the United States Army Corps of Engineers result in a stay of the conditions, those conditions must be considered stayed in the IPDES permit for the duration of the stay. ()

d. If, during the comment period for an IPDES draft permit, the United States Fish and Wildlife Service, the National Marine Fisheries Service, or any other state or federal agency with jurisdiction over fish, wildlife, or public health advises the Department in writing that the imposition of specified conditions upon the permit is necessary to avoid substantial impairment of fish, shellfish, or wildlife resources, the Department may include the specified conditions in the permit to the extent the Department determines they are necessary to comply with the provisions of the Clean Water Act. ()

e. In some cases, the Department may confer with one (1) or more of the agencies referred to in Subsections 109.02.c. and 109.02.d. before issuing a draft permit and may set out an agency's view in the fact sheet or the draft permit. ()

f. The Department will consider all comments in making the final decision and will answer the comments as provided in this subsection. ()

g. Requests for extending a public comment period must be received in writing by the Department prior to the last day of the comment period. ()

h. After the close of the public comment period and prior to the issuance of the final permit decision, the Department will afford the permit applicant an opportunity to provide additional information to respond to public comments. In addition, in order to respond to comments, the Department may request the applicant provide additional information. ()

03. Response to Comments. When the Department issues a final permit, the Department will issue a response to comments, that will be available to the public. The response must: ()

a. Specify which provisions, if any, of the draft permit have been changed in the final permit decision, and the reasons for the change; and ()

b. Briefly describe and respond to all significant comments on the draft permit raised during the

public comment period, or during any meeting. ()

110. FEE SCHEDULE FOR IPDES PERMITTED FACILITIES.

01. Effective Date. Annual fees must be paid for each fee year beginning one (1) year after the effective date of the IPDES program for the affected category of discharger and continuing for each succeeding year. ()

02. Fee Schedule. ()

a. Publicly and privately owned treatment works, and any other discharger designated by the Department (Subsection 105.11.a.), must pay an annual fee based on the number of equivalent dwelling units (EDUs). The fee is \$1.74 per EDU. EDUs and the appropriate annual fee will be calculated according to the definition of EDUs in Section 010 by the following: ()

i. The Department calculates facility EDUs; or ()

ii. Existing facilities may annually report to the Department the number of EDUs served; or ()

iii. New facilities may report to the Department the number of EDUs to be served, based on the facility planning design as part of the IPDES permit application. ()

b. All other permitted IPDES dischargers, excluding small scale suction dredges, must pay an annual fee, an application fee, or both according to the following schedule:

Permit Type	Application	Annual
Non-POTW Individual Permits		
Major	\$0	\$13,000
Minor	\$0	\$4,000
Storm Water General Permits		
Construction (CGP)		
1-10 acres¹	\$200	\$0
≥10-50 acres	\$400	\$75
≥50-100 acres	\$750	\$100
≥100-500 acres	\$1,000	\$400
>500 acres	\$1,250	\$400
Low Erosivity Waiver (CGP)	\$125	\$0
Industrial (MSGP) Permits	\$1,500	\$1,000
Cert. of No Exposure (MSGP)	\$250	\$100
Other General Permits	\$0	\$0

¹This includes NOIs for construction that will disturb one or more acres of land, or will disturb less than one acre of land but are part of a common plan of development or sale that will ultimately disturb one or more acres of land. ()

03. Fee Assessment. ()

a. An annual fee assessment will be generated for each IPDES-permitted facility for which an annual

fee is required as set forth in Subsection 110.02. Annual fees will be determined based on the twelve (12) months between October 1 and September 30 of the following calendar year. ()

b. Application Fees and Annual Fees. ()

i. Application fees, as identified in Subsection 110.02.b., are assessed at the time of application for coverage under an individual permit, or notice of intent for coverage under a general permit. ()

ii. Owners or operators of multi-year storm water facilities or construction projects are subject to annual fees that will be assessed in the year (October through September) immediately following the receipt of the application or notice of intent for coverage. ()

c. Assessment of annual fees will consider the number of months a permittee was covered under either a general or an individual permit in a given year (October through September of the following calendar year). If the permittee was covered for less than a full twelve (12) months, the assessed fee will be pro-rated to account for less than a full year's coverage under the permit. ()

04. Billing. For those permitted facilities subject to an annual fee, the annual fee will be assessed and a statement will be mailed by the Department on or before July 1 of each year. ()

05. Payment. ()

a. Payment of the annual fee is due on October 1, unless it is a Saturday, Sunday, or legal holiday, in which event the payment is due on the successive business day. ()

b. If a POTW serves five hundred seventy-five (575) EDUs or more, the facility may request to divide its annual fee payment into equal monthly or quarterly installments by submitting a request to the Department on the proper request form provided with the initial billing statement. ()

i. The Department will notify an applicable POTW, in writing, of approval or denial of a requested monthly or quarterly installment plan within ten (10) business days of the Department receiving such a request. ()

ii. If a POTW has been approved to pay monthly installments then each installment is due by the first day of each month, unless it is a Saturday, a Sunday, or a legal holiday, in which event the installment is due on the next business day. ()

iii. If a POTW has been approved to pay quarterly installments then each installment is due by the first day of the month of each quarter (October 1, January 1, April 1, and July 1), unless it is a Saturday, a Sunday, or a legal holiday, in which event the installment is due on the next business day. ()

c. Payment of the application fee is due with the application for an individual permit or notice of intent for coverage under a general permit. ()

06. Delinquent Unpaid Fees. A permittee covered under either a general permit or an individual permit will be delinquent in payment if the annual fee assessed has not been received by the Department by November 1; or if having first opted to pay monthly or quarterly installments, its monthly or quarterly installment has not been received by the Department by the last day of the month in which the monthly or quarterly payment is due. ()

07. Suspension of Services and Disapproval Designation. For any permittee delinquent in payment of fees assessed under Subsections 110.02 and 110.06: ()

a. In excess of ninety (90) days, the Department will suspend all technical services it provides. The permittee will receive a warning letter that identifies administrative enforcement actions the Department may pursue if the permittee does not comply with the terms of the permit. ()

b. In excess of one hundred and eighty (180) days, the Department will consider the permittee in non-compliance with permit conditions and these rules, and subject to provisions described in Section 500 (Enforcement) of these rules. ()

08. Reinstatement of Suspended Services and Approval Status. For any permittee for which delinquency of fee payment pursuant to Subsection 110.07 has resulted in the suspension of technical services, determination of non-compliance of permit condition, or both, the continuation of technical services, determination of compliance based on payment of fee, or both will occur upon payment of delinquent annual fee assessments. ()

09. Enforcement Action. Nothing in Section 110 (Fee Schedule for IPDES Permitted Facilities) waives the Department's right to undertake a non-fee related enforcement action at any time, including seeking penalties, as provided in Sections 39-108, 39-109, and 39-117, Idaho Code. ()

10. Responsibility to Comply. Subsection 110.07 does not relieve any permittee from its obligation to comply with all applicable state and federal statutes, rules, regulations, permits, or orders. ()

111. -- 119. (RESERVED)

120. NEW SOURCES AND NEW DISCHARGES.

01. Criteria for New Source Determination. Except as otherwise provided in an applicable new source performance standard, a source is a new source if it meets the definition in Section 010 (Definitions), and: ()

a. Is constructed at a site at which no other source is located; or ()

b. Totally replaces the process or production equipment that causes the discharge of pollutants at an existing source; or ()

c. Its processes are substantially independent of an existing source at the same site. In determining whether these processes are substantially independent, the Department shall consider such factors as: ()

i. The extent to which the new facility is integrated with the existing plant; and ()

ii. The extent to which the new facility is engaged in the same general type of activity as the existing source. ()

02. New Source vs. New Discharger. A source meeting the requirements of Subsection 120.01 is a new source only if a new source performance standard is independently applicable to it. If there is no such independently applicable standard, the source is a new discharger, as defined in Section 010 (Definitions). ()

03. Modification vs. New Source/Discharger. Construction on a site at which an existing source is located, results in a modification subject to Subsection 201.02, rather than a new source (or a new discharger) if the construction does not create a new building, structure, facility, or installation meeting the criteria of Subsection 120.01, but otherwise alters, replaces, or adds to existing process or production equipment. ()

04. New Source Construction. Construction of a new source has commenced if the owner or operator has: ()

a. Begun, or caused to begin as part of a continuous on-site construction program: ()

i. Any placement, assembly, or installation of facilities or equipment; or ()

ii. Significant site preparation work including clearing, excavation or removal of existing buildings, structures, or facilities which is necessary for the placement, assembly, or installation of new source facilities or equipment; or ()

b. Entered into a binding contractual obligation for the purchase of facilities or equipment which are intended to be used in its operation within a reasonable time. Items which do not constitute contractual obligations under this section include: ()

- i. Options to purchase or contracts which can be terminated or modified without substantial loss; ()
- ii. Contracts for feasibility engineering; and ()
- iii. Design studies. ()

121. -- 129. (RESERVED)

130. GENERAL PERMITS.

01. Coverage. The Department may issue a general permit in accordance with the following: ()

a. Within a geographic area, the general permit will be written to cover one (1) or more categories or subcategories of discharges or sludge use or disposal practices or facilities described in the permit under Subsection 130.01.b.ii., except those covered by individual permits within a geographic area. The area should correspond to existing geographic or political boundaries such as: ()

- i. Designated planning areas under the Clean Water Act sections 208 and 303; ()
- ii. Sewer districts or sewer authorities; ()
- iii. City, county, or state political boundaries; ()
- iv. State highway systems; ()
- v. Standard metropolitan statistical areas as defined by state or federal agencies; ()
- vi. Urbanized areas as designated by the U.S. Census Bureau; or ()
- vii. Any other appropriate division or combination of boundaries. ()

b. The general permit may be written to regulate one (1) or more categories or subcategories of discharges or sludge use or disposal practices or facilities, within the area described in Subsection 130.01.a., where the sources within a covered subcategory of discharges are either: ()

- i. Storm water point sources; or ()
- ii. One (1) or more categories or subcategories of point sources other than storm water point sources or TWTDS, if the point sources or TWTDS within each category or subcategory all: ()
 - (1) Involve the same or substantially similar types of operations; ()
 - (2) Discharge the same types of wastes or engage in the same types of sludge use or disposal practices; ()
 - (3) Require the same effluent limitations, operating conditions, or standards for sewage sludge use or disposal; ()
 - (4) Require the same or similar monitoring; and ()
 - (5) In the opinion of the Department, are more appropriately controlled under a general permit than under individual permits. ()

c. Where sources within a specific category or subcategory of dischargers are subject to water quality-based limits imposed pursuant to Section 302 (Establishing Permit Provisions), the sources in that specific category or subcategory are subject to the same water quality-based effluent limitations. ()

d. Other requirements: ()

i. The general permit must clearly identify the applicable conditions for each category or subcategory of dischargers or TWTDS covered by the permit; and ()

ii. The general permit may exclude specified sources or areas from coverage. ()

iii. For general permits issued under Subsection 130.01.b. for small MS4s, the Department must establish the terms and conditions necessary to meet the requirements of 40 CFR 122.34 using one (1) of the two (2) permitting approaches described in Subsections 130.01.d.iii(1) and (2). The Department must indicate in the permit or fact sheet which approach is being used. ()

(1) Comprehensive general permit. The Department includes all required permit terms and conditions in the general permit; or ()

(2) Two-step general permit. The Department includes required permit terms and conditions in the general permit applicable to all eligible small MS4s and, during the process of authorizing small MS4s to discharge, establishes additional terms and conditions not included in the general permit to satisfy one (1) or more of the permit requirements in 40 CFR 122.34 for individual small MS4 operators. ()

(a) The general permit must require that any small MS4 operator seeking authorization to discharge under the general permit submit a Notice of Intent (NOI) consisting of the minimum required information in Subsection 130.05.b., and any other information the Director identifies as necessary to establish additional terms and conditions that satisfy the permit requirements of 40 CFR 122.34, such as the information required under Subsection 130.05.b. The general permit will explain any other steps necessary to obtain permit authorization. ()

(b) The Department must review the NOI submitted by the small MS4 operator to determine whether the information in the NOI is complete and to establish the additional terms and conditions necessary to meet the requirements of 40 CFR 122.34. The Department may require the small MS4 operator to submit additional information. If the Department makes a preliminary decision to authorize the small MS4 operator to discharge under the general permit, the Department must give the public notice of and opportunity to comment and request a public meeting on its proposed authorization and the NOI, the proposed additional terms and conditions, and the basis for these additional requirements. The public notice, the process for submitting public comments and meeting requests, and the meeting process if a request for a meeting is granted, must follow the procedures applicable to draft permits set forth in Sections 108 and 109 except Subsection 109.01.d. The Department must respond to significant comments received during the comment period as provided in Subsection 109.03. ()

(c) Upon authorization for the MS4 to discharge under the general permit, the final additional terms and conditions applicable to the MS4 operator become effective. The Department must notify the permittee and inform the public of the decision to authorize the MS4 to discharge under the general permit and of the final additional terms and conditions specific to the MS4. ()

02. Electronic Submittals. As of December 21, 2020, all notices of intent submitted in compliance with this section must be submitted electronically by the discharger (or treatment works treating domestic sewage) to the Department unless waived pursuant to 40 CFR 127.15. ()

03. Information Retention Schedule. An applicant must keep records of all data used to complete a notice of intent and any supplemental information submitted for a period of at least three (3) years from the date the notice of intent is signed. ()

04. Notice of Intent. ()

a. Any person required under Subsections 102.01 through 102.03 must submit a notice of intent to the Department for coverage under an IPDES general permit as set out in Subsection 130.05. ()

b. A notice of intent must be signed and certified as required by Section 090 (Signature Requirements). ()

05. Administration. ()

a. General permits may be issued, modified, revoked and reissued, or terminated in accordance with Sections 201 (Modification, or Revocation and Reissuance of IPDES Permits) and 203 (Termination of IPDES Permits). ()

b. Authorization to discharge, or authorization to engage in sludge use and disposal practices will follow these procedures: ()

i. Except as provided in Subsections 130.05.b.xi. and 130.05.b.xii., a discharger must submit, in accordance with general permit requirements, a complete and timely notice of intent which will fulfill the requirements for permit applications; ()

ii. A discharger (or TWTDS) who fails to submit a notice of intent in accordance with the terms of the permit is not authorized to discharge (or in the case of sludge disposal permit, to engage in a sludge use or disposal practice) under the terms of the general permit unless: ()

(1) The general permit, in accordance with Subsections 130.05.b.xi., contains a provision that a notice of intent is not required; or ()

(2) The Department notifies a discharger (or TWTDS) that it is covered by a general permit in accordance with Subsection 130.05.b.xii.; ()

iii. All notices of intent must be signed as required in Section 090 (Signature Requirements); ()

iv. The general permit will specify the contents of the notice of intent and require the submission of information necessary for adequate program implementation, including at a minimum: ()

(1) The legal name, address, and EIN or Department equivalent of the owner or operator; ()

(2) The facility name and address; ()

(3) Type of facility or discharges; and ()

(4) The receiving stream(s); ()

v. Coverage under a general permit may be terminated or revoked in accordance with Subsection 130.05.c. through e.; ()

vi. Notices of intent for coverage under a general permit for CAFOs must include the information specified in Subsection 105.09 and 40 CFR 122.21(i)(1), including a topographic map; ()

vii. A CAFO owner or operator may be authorized to discharge under a general permit only in accordance with the process described in 40 CFR 122.23(h); ()

viii. General permits for storm water discharges associated with industrial activity from inactive mining, inactive oil and gas operations, or inactive landfills occurring on federal lands where an operator cannot be identified may contain alternative notice of intent requirements; ()

ix. General permits shall specify the deadlines for submitting notices of intent to be covered and the date(s) when a discharger is authorized to discharge under the permit; ()

x. General permits shall specify whether a discharger (or TWTDS), who has submitted a complete and timely notice of intent to be covered in accordance with the general permit and is eligible for coverage under the permit, is authorized to discharge (or in the case of a sludge disposal permit, to engage in a sludge use or disposal practice) in accordance with the permit either: ()

- (1) Upon receipt of the notice of intent by the Department; ()
- (2) After a waiting period specified in the general permit; ()
- (3) On a date specified in the general permit; or ()
- (4) Upon receipt of notification of inclusion by the Department; ()

xi. Discharges other than discharges from POTWs, combined sewer overflows, municipal separate storm sewer systems, primary industrial facilities, and storm water discharges associated with industrial activity, may, at the discretion of the Department, be authorized to discharge under a general permit without submitting a notice of intent where the Department finds that a notice of intent requirement would be inappropriate. The Department shall provide in the public notice of the general permit the reasons for not requiring a notice of intent. In making such a finding, the Department shall consider: ()

- (1) The type of discharge; ()
- (2) The expected nature of the discharge; ()
- (3) The potential for toxic and conventional pollutants in the discharges; ()
- (4) The expected volume of the discharges; ()
- (5) Other means of identifying discharges covered by the permit; and ()
- (6) The estimated number of discharges to be covered by the permit; and ()

xii. The Department may notify a discharger (or TWTDS) that it is covered by a general permit, even if the discharger (or TWTDS) has not submitted a notice of intent to be covered. A discharger (or TWTDS) so notified may request an individual permit as specified in Subsection 130.05.d. ()

c. The Department may terminate, revoke, or deny coverage under a general permit, and require the discharger or applicant to apply for and obtain an individual IPDES permit. Any interested person may petition the Department to take action under this subsection. Cases where an individual IPDES permit may be required include the following: ()

- i. The discharger or TWTDS is not in compliance with the conditions of the general permit; ()
- ii. A change has occurred in the availability of demonstrated technology or practices for the control or abatement of pollutants applicable to the point source or TWTDS; ()
- iii. Effluent limitation guidelines are promulgated for point sources covered by the general permit; ()
- iv. A Water Quality Management plan containing requirements applicable to such point sources is approved; ()
- v. Circumstances have changed since the time of the request to be covered so that the discharger is no longer appropriately controlled under the general permit, or either a temporary or permanent reduction or elimination of the authorized discharge is necessary; ()

vi. Standards for sewage sludge use or disposal have been promulgated for the sludge use and disposal practice covered by the general IPDES permit; or ()

vii. The discharge(s) is a significant contributor of pollutants. In making this determination, the Department may consider the following factors: ()

(1) The location of the discharge with respect to waters of the United States; ()

(2) The size of the discharge; ()

(3) The quantity and nature of the pollutants discharged to waters of the United States; and ()

(4) Other relevant factors. ()

d. Any owner or operator authorized by a general permit may request to be excluded from the coverage of the general permit by applying for an individual permit. ()

i. The owner or operator shall submit an application under Section 105 (Application for an Individual IPDES Permit), with reasons supporting the request, to the Department no later than ninety (90) days after the publication of the general permit. ()

ii. The Department shall process the request under Sections 106 (Individual Permit Application Review), 107 (Decision Process), 108 (Draft Permit and Fact Sheet) and 109 (Public Notification and Comment). ()

iii. The Department shall grant a request by issuing an individual permit if the reasons cited by the owner or operator are adequate to support the request. ()

e. When an individual IPDES permit is issued to an owner or operator otherwise subject to a general IPDES permit, the applicability of the general permit to the individual IPDES permittee is automatically terminated on the effective date of the individual permit. ()

f. A source excluded from a general permit, solely because it already has an individual permit, may request that the individual permit be revoked, and that it be covered by the general permit. Upon revocation of the individual permit, the general permit shall apply to the source. ()

06. Case-by-Case Requirements for Individual Permits. ()

a. The Department may require any owner or operator authorized by a general permit to apply for an individual IPDES permit as provided in Subsection 130.05.c., only if the owner or operator has been notified in writing that a permit application is required. This notice shall include a brief statement of the reasons for this decision, an application form, a statement setting a time for the owner or operator to file the application, a statement that on the effective date of the individual IPDES permit, the general permit as it applies to the individual permittee shall automatically terminate, and a statement that the owner or operator may appeal the Department's decision as provided in Section 204 (Appeals Process). The Department may grant additional time upon request of the applicant. ()

b. Prior to a case-by-case determination that an individual permit is required for a storm water discharge under this section (see 40 CFR 122.26(a)(1)(v), (a)(9)(iii), and Subsection 105.19), the Department may require the discharger to submit a permit application or other information regarding the discharge described in the Clean Water Act section 308. ()

i. In requiring such information, the Department shall notify the discharger in writing and shall send an application form with the notice. ()

ii. The discharger must apply for a permit within one hundred eighty (180) days of notice, unless permission for a later date is granted by the Department. ()

131. -- 199. (RESERVED)

200. RENEWAL OF IPDES PERMITS.

01. Interim Effluent Limits. Except as provided in Subsection 200.02, when a permit is renewed or reissued, interim effluent limitations, standards or conditions must be at least as stringent as the final effluent limitations, standards, or conditions in the previous permit unless the circumstances on which the previous permit was based: ()

- a. Have materially and substantially changed since the time the permit was issued; and ()
- b. Would constitute cause for permit modification or revocation and reissuance under Subsection 201.02. ()

02. Final Clean Water Act Section 402(a)(1)(B) Effluent Limits. In the case of effluent limitations established by the Department on the basis of the Clean Water Act section 402(a)(1)(B), a permit may not be renewed, reissued, or modified on the basis of effluent guidelines promulgated under Clean Water Act section 304(b) after the original issuance of a permit, to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit, except a permit may be renewed, reissued, or modified to contain a less stringent effluent limitation applicable to a pollutant, if: ()

- a. Material and substantial alterations or additions to the permitted facility occurred after permit issuance, which justify the application of a less stringent effluent limitation; ()
- b. Information is available: ()
 - i. Which was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and which would have justified the application of a less stringent effluent limitation at the time of permit issuance; or ()
 - ii. Which the Department determines indicates that technical mistakes or mistaken interpretations of law were made in issuing the permit under the Clean Water Act section 402(a)(1)(b); ()
- c. A less stringent effluent limitation is necessary because of events over which the permittee has no control and for which there is no reasonably available remedy; ()
- d. The permittee has received a permit modification under the Clean Water Act section 301(c), 301(g), 301(i), 301(k), 301(n), or 316(a); or ()
- e. The permittee has installed the treatment facilities required to meet the effluent limitations in the previous permit and has properly operated and maintained the facilities but has nevertheless been unable to achieve the previous effluent limitations. In this case the limitations in the reviewed, reissued, or modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by effluent guidelines in effect at the time of permit renewal, reissuance, or modification). ()

03. Final Clean Water Act Section 301(b)(1)(C) or 303 Effluent Limits. In the case of effluent limitations established on the basis of Clean Water Act section 301(b)(1)(C) or section 303(d) or (e), a permit may not be renewed, reissued, or modified to contain effluent limitations which are less stringent than the comparable effluent limitations in the previous permit except when: ()

- a. One of the exceptions in Subsection 200.02 apply; or ()
- b. The water to which the discharge occurs is identified as impaired on Idaho's Integrated Report and the effluent limitation is based on a total maximum daily load or other waste load allocation established under Clean Water Act section 303, if the cumulative effect of all revised effluent limitations based on such total maximum daily load or waste load allocation will assure the attainment of applicable water quality standards; or ()

c. The water quality in the water to which the discharge occurs meets or exceeds levels required by applicable water quality standards and the effluent limitation is based on a total maximum daily load or other waste load allocation established under Clean Water Act section 303, any water quality standard, or any permitting standard, if such revision is subject to and consistent with the antidegradation policy and implementation procedures in the water quality standards. ()

04. Effluent Limits and Water Quality Standards. In no event may a permit with respect to which Subsection 200.02 or 200.03 applies be renewed, reissued, or modified to contain an effluent limitation which is less stringent than required by effluent guidelines in effect at the time the permit is renewed, reissued, or modified. In no event may such a permit to discharge into waters of the United States be renewed, issued, or modified to contain a less stringent effluent limitation if the implementation of such limitation would result in a violation of a water quality standard under IDAPA 58.01.02, “Water Quality Standards.” ()

201. MODIFICATION, OR REVOCATION AND REISSUANCE OF IPDES PERMITS.

01. Procedures to Modify, or Revoke and Reissue Permits. ()

a. Permits may be modified, or revoked and reissued either at the request of any interested person (including the permittee) or upon the Department’s initiative. However, permits may only be modified or revoked and reissued for the reasons specified in Subsection 201.02. All requests shall be in writing and shall contain facts or reasons supporting the request. ()

b. If the Department tentatively decides to modify or revoke and reissue a permit, the Department shall prepare a draft permit under Section 108 (Draft Permit and Fact Sheet), incorporating the proposed changes. ()

i. The Department may request additional information and, in the case of a modified permit, may require the submission of an updated application. If the tentative decision is to revoke and reissue a permit, the Department shall require the submission of a new application. ()

ii. In a permit modification under this section, only those conditions to be modified shall be reopened when a new draft permit is prepared. All other aspects of the existing permit shall remain in effect for the duration of the unmodified permit. ()

iii. When a permit is revoked and reissued under this section, the entire permit is reopened just as if the permit had expired and was being reissued. During any revocation and reissuance proceeding, the permittee shall comply with all conditions of the existing permit until a new final permit is reissued. ()

iv. Minor modifications, as defined in Subsection 201.03, do not require the development of a draft permit, fact sheet, nor must minor modifications be subjected to public notification and comment. ()

02. Causes to Modify, or Revoke and Reissue Permits. When the Department receives any pertinent information (for example, inspects the facility, receives information submitted by the permittee as required in the permit, receives a request for modification or revocation and reissuance under Subsection 201.01, or conducts a review of the permit file), the Department may determine whether or not one (1) or more of the causes listed in Subsections 201.02.c. and 201.02.d. for modification or revocation and reissuance or both exist. ()

a. If cause exists, the Department may modify or revoke and reissue the permit accordingly, subject to the limitations of Subsection 201.01.b., and may request a new or updated application, if necessary. ()

b. If cause does not exist under this section, the Department shall not modify or revoke and reissue the permit. ()

c. The following are causes for modification but not revocation and reissuance of permits except when the permittee requests or agrees: ()

i. There are material and substantial alterations or additions to the permitted facility or activity

(including a change or changes in the permittee's sludge use or disposal practice), which occurred after permit issuance, and which justify the application of permit conditions that are different or absent in the existing permit. ()

ii. The Department has received new information. Permits may be modified during their terms for this cause only if the information was not available at the time of permit issuance (other than revised regulations, guidance, or test methods) and would have justified the application of different permit conditions at the time of issuance: ()

(1) For IPDES general permits (Section 130) this cause includes any information indicating that cumulative effects on the environment are unacceptable; and ()

(2) For new source or new discharger IPDES permits (Section 120), this cause shall include any significant information derived from effluent testing required under Subsection 105.08 or 105.16 after issuance of the permit. ()

iii. The standards or regulations on which the permit was based have been changed by promulgation of amended standards or regulations or by judicial decision after the permit was issued. Permits may be modified during their terms for this cause only as follows: ()

(1) For promulgation of amended standards or regulations, when: ()

(a) The permit condition requested to be modified was based on a promulgated effluent limitation guideline, EPA approved or promulgated water quality standards, or the Secondary Treatment Regulations under 40 CFR Part 133; ()

(b) EPA has revised, withdrawn, or modified that portion of the regulation or effluent limitation guideline on which the permit condition was based, or has approved a state action with regard to a water quality standard on which the permit condition was based; and ()

(c) A permittee requests modification in accordance with Subsection 201.01 or 203.01 within ninety (90) days after notice of the action on which the request is based; and ()

(2) For judicial decisions, a court of competent jurisdiction has remanded and stayed EPA or Idaho promulgated regulations or effluent limitation guidelines, if the remand and stay concerns that portion of the regulations or guidelines on which the permit condition was based and a request is filed by the permittee in accordance with Subsection 201.01 or 203.01 within ninety (90) days of judicial remand. ()

iv. The Department determines good cause exists for modification of a compliance schedule, such as an act of God, strike, flood, or materials shortage or other events over which the permittee has little or no control and for which there is no reasonably available remedy. However, in no case may an IPDES compliance schedule be modified to extend beyond an applicable Clean Water Act statutory deadline. ()

v. When the permittee has filed a request for a variance under Clean Water Act section 301(c), 301(g), 301(i), 301(k), or 316(a) or for fundamentally different factors within the time specified in Section 310 (Variances). ()

vi. When required to incorporate an applicable Clean Water Act 307(a) toxic effluent standard or prohibition, under Subsection 302.04. ()

vii. When required by the reopener conditions in a permit, which are established in the permit under Subsection 302.05 or 40 CFR 403.18(e) (Pretreatment Standards). ()

viii. Upon request of a permittee who qualifies for effluent limitations on a net basis, or when a discharger is no longer eligible for net limitations, as provided in Subsection 303.07. ()

ix. As necessary under 40 CFR 403.8(e) (Pretreatment Program Requirements: Development and

Implementation by POTW). ()

x. Upon failure of an approved state to notify, as required by the Clean Water Act section 402(b)(3), another state whose waters may be affected by a discharge from the approved state. ()

xi. When the level of discharge of any pollutant which is not limited in the permit exceeds the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under 40 CFR 125.3(c). ()

xii. To establish a notification level as provided in Subsection 302.08. ()

xiii. To modify a schedule of compliance to reflect the time lost during construction of an innovative or alternative facility, in the case of a POTW which has received a loan under IDAPA 58.01.12, "Rules for Administration of Water Pollution Control Loans." In no case shall the compliance schedule be modified to extend beyond an applicable Clean Water Act statutory deadline. ()

xiv. For a small MS4, to include an effluent limitation requiring implementation of a minimum control measure or measures as specified in 40 CFR 122.34(b) when: ()

(1) The permit does not include such measure(s) based upon the determination that another entity was responsible for implementation of the requirement(s), and ()

(2) The other entity fails to implement measure(s) that satisfy the requirement(s). ()

xv. To correct technical mistakes, such as errors in calculation, or mistaken interpretations of law made in determining permit conditions. ()

xvi. When the discharger has installed the treatment technology considered by the permit writer in setting effluent limitations imposed under the Clean Water Act section 402(a)(1) and has properly operated and maintained the facilities but nevertheless has been unable to achieve those effluent limitations. In this case, the limitations in the modified permit may reflect the level of pollutant control actually achieved (but shall not be less stringent than required by a subsequently promulgated effluent limitations guideline). ()

xvii. The incorporation of the terms of a CAFO's nutrient management plan into the terms and conditions of a general permit when a CAFO obtains coverage under a general permit in accordance with 40 CFR 122.23(h) and Section 130 (General Permits) is not a cause for modification pursuant to the requirements of this section. ()

xviii. When required by a permit condition to incorporate a land application or sludge disposal plan for beneficial reuse of sewage sludge, to revise an existing land application or sludge disposal plan, or to add a land application or sludge disposal plan as required by IDAPA 58.01.16.650, "Wastewater Rules," and Section 380 (Sewage Sludge) of these rules. ()

d. The following are causes to modify or, alternatively, revoke and reissue a permit: ()

i. Cause exists for termination under Subsection 203.03, and the Department determines that modification or revocation and reissuance is appropriate; ()

ii. The Department has received notification, as required in the permit, of a proposed transfer of the permit; or ()

iii. A permit also may be modified to reflect a transfer after the effective date of an automatic transfer (Subsection 202.02) but will not be revoked and reissued after the effective date of the transfer except upon the request of the new permittee. ()

03. Minor Modifications of Permits. Upon the consent of the permittee, the Department may modify a permit to make the corrections or allowances for changes in the permitted activity listed in this subsection without

following the procedures of Sections 108 (Draft Permit and Fact Sheet), 109 (Public Notification and Comment), and Subsection 201.01. Any permit modification not processed as a minor modification under this subsection must be made for cause and must meet the requirements of Section 108 (Draft Permit and Fact Sheet) and Section 109 (Public Notification and Comment). Minor modifications may: ()

- a. Correct typographical errors; ()
- b. Require more frequent monitoring or reporting by the permittee; ()
- c. Change an interim compliance date in a schedule of compliance, provided the new date is not more than one hundred twenty (120) days after the date specified in the existing permit and does not interfere with attainment of the final compliance date requirement; ()
- d. Allow for a change in ownership or operational control of a facility where the Department determines that no other change in the permit is necessary, provided that a written agreement containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee has been submitted to the Department; ()
- e. Change the construction schedule for a discharger which is a new source. No such change shall affect a discharger's obligation to have all pollution control equipment installed and in operation prior to discharge under Section 120 (New Sources and New Discharges), and 40 CFR 122.29(d); ()
- f. Delete a point source outfall when the discharge from that outfall is terminated and does not result in discharge of pollutants from other outfalls except in accordance with permit limits; ()
- g. Incorporate conditions of a POTW pretreatment program that has been approved in accordance with the procedures in 40 CFR 403.11 or a modification that has been approved in accordance with the procedures in 40 CFR 403.18 as enforceable conditions of the POTW's permits; ()
- h. Incorporate changes to the terms of a CAFO's nutrient management plan that have been revised in accordance with the requirements of 40 CFR 122.42(e)(6); or ()
- i. Require electronic reporting requirements (to replace paper reporting requirements) including those specified in 40 CFR Part 127 (NPDES Electronic Reporting). ()

202. TRANSFER OF IPDES PERMITS.

01. Transfers by Modification. Except as provided in Subsection 202.02, a permit may be transferred by the permittee to a new owner or operator only if the permit has been modified or revoked and reissued under Subsection 201.02.d., or a minor modification made under Subsection 201.03, to identify the new permittee and incorporate such other requirements as may be necessary under the Clean Water Act. ()

02. Automatic Transfers. As an alternative to transfers by modification, any IPDES permit may be automatically transferred to a new permittee if: ()

- a. The current permittee notifies the Department at least thirty (30) days in advance of the proposed transfer date; ()
- b. The notice includes a written agreement between the existing and new permittees containing a specific date for transfer of permit responsibility, coverage, and liability between the current and new permittee; and ()
- c. The Department does not notify the existing permittee and the proposed new permittee of its intent to modify or revoke and reissue the permit. A modification under this subsection may also be a minor modification under Subsection 201.03. If this notice is not received, the transfer is effective on the date specified in the agreement. ()

203. TERMINATION OF IPDES PERMITS.

01. Request to Terminate or Termination Initiated by the Department. Permits may be terminated either at the request of any interested person (including the permittee) or upon the Department’s own initiative. However, permits may only be terminated for the reasons specified in Subsection 203.03 or 203.04. ()

a. Request for termination by persons other than the permittee must be submitted in writing to the Department. ()

b. As of December 21, 2020, all NOTs submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, the permittee may be required to report electronically if specified by a particular permit. ()

02. Tentative Permit Termination. Except as provided in Subsection 203.04, if the Department tentatively decides to terminate a permit under Subsection 203.03, the Department will issue a notice of intent to terminate. A notice of intent to terminate will be available for public comment, and the Department will give notice of an opportunity for public meetings, as specified in Section 109 (Public Notification and Comment). ()

03. Cause to Terminate Permits. The following are causes for terminating a permit during its term, or for denying a permit renewal application: ()

a. Noncompliance by the permittee with any condition of the permit; ()

b. The permittee's failure in the application or during the permit issuance process to disclose fully all relevant facts, or the permittee's misrepresentation of any relevant facts at any time; ()

c. A determination that the permitted activity endangers human health or the environment and can only be regulated to acceptable levels by permit modification or termination; or ()

d. A change in any condition that requires either a temporary or permanent reduction or elimination of any discharge or sludge use or disposal practice controlled by the permit (for example, plant closure or termination of discharge by connection to a POTW), or other situations where the Department has sufficiently reliable basis for determining discharge will cease. ()

04. Expedited Termination Process for Terminated or Eliminated Discharge. If the entire discharge is permanently terminated by elimination of the flow or by connection to a POTW (but not by land application or disposal into a well), the Department may terminate the permit by notice to the permittee. ()

a. Termination by notice becomes effective thirty (30) days after notice is sent (expedited permit termination), unless the permittee objects within that time. ()

b. If the permittee objects during that period, the Department will follow procedures for termination in Subsection 203.02. ()

c. Expedited permit termination procedures are not available to permittees that are subject to pending state and/or federal enforcement actions including citizen suits brought under federal law. If requesting expedited permit termination procedures, a permittee must certify that it is not subject to any pending state or federal enforcement actions including citizen suits brought under federal law. ()

204. APPEALS PROCESS.

01. Petition for Review of a Permit Decision. Appeal of a final IPDES permit decision, issued under Section 107 (Decision Process), to the Hearing Authority is commenced by filing a Petition for Review with the Department’s Hearing Coordinator within the time prescribed in Subsection 204.01.b. The “Hearing Authority” shall

be a Hearing Officer appointed by the Director from a pool of Hearing Officers approved by the Board. ()

a. Any person who is aggrieved by the final permit decision may file a Petition for Review as provided in this section. A person aggrieved is limited to the permit holder or applicant, and any person or entity who filed comments or who participated in the public meeting on the draft permit. ()

b. A Petition for Review must be filed with the Department’s Hearing Coordinator within twenty-eight (28) days after the Department serves notice of the final permit decision under Section 107 (Decision Process). A petition is filed when it is received by the Department’s Hearing Coordinator at the address specified in Subsection 204.13. ()

c. In addition to meeting the requirements in Subsection 204.06, a Petition for Review must: ()

i. Be confined to the issues raised during the public comment process or to changes made to the permit by the Department after the close of the public comment period; ()

ii. Identify the permit condition or other specific aspect of the permit decision that is being challenged; ()

iii. Set forth the legal and factual basis for the petitioner’s contentions; ()

iv. Set forth the relief sought; and ()

v. Set forth the basis for asserting that the petitioner is an aggrieved person. ()

02. Public Notice of the Petition for Review. Within fourteen (14) days of the date a Petition for Review has been filed, the Hearing Authority must give reasonable notice to the public of the petition. ()

03. Administrative Record Filed By the Department. The Department shall file a certified copy of the administrative record, as identified in Section 600 (Administrative Records and Data Management), with an index within twenty-eight (28) days of the date the Petition for Review was filed. ()

04. Participation by the Permit Applicant or Permit Holder. A permit applicant or permit holder who did not file a petition but who wishes to participate in the appeal process must file a notice of appearance within twenty-eight (28) days of the date the Petition for Review was filed. ()

05. Petition to Intervene. Any person who has a direct and substantial interest in the outcome of the Petition for Review may file a Petition to Intervene. ()

a. The Petition to Intervene must set forth the interest of the intervener, and why intervention would not unduly broaden the issues and cause delay or prejudice to the parties. ()

b. Petitions to Intervene must be filed within fourteen (14) days of the notice of filing of the Petition for Review. ()

c. Any party opposing a Petition to Intervene must file objections within seven (7) days after service of the Petition to Intervene and serve the objection upon all parties of record and upon the person petitioning to intervene. ()

d. If a Petition to Intervene shows direct and substantial interest in the outcome of the Petition for Review, does not unduly broaden the issues, and will not cause delay or prejudice to the parties, the Hearing Authority shall grant intervention. ()

06. Content and Form Requirements for Petitions and Briefs. All petitions and briefs filed under this section must: ()

a. Identify, in the caption, the permit applicant or holder, the permitted facility, and the permit number.

The caption should also include the case number, if available at the time of filing, and the title of the document, and ()

b. Specify on the upper left corner of the first page, the name, address, telephone number, e-mail address and facsimile number, if any, of the person filing the document. If the person filing the document is a representative of a party as provided in Subsection 204.11, the document must identify the name of the person or entity represented. No more than two (2) representatives for service of documents may be listed. ()

07. Augmenting the Administrative Record. Consideration of the Petition for Review by the Hearing Authority is limited to the certified administrative record unless, upon the request of a party, the Hearing Authority allows the record to be augmented. A request to augment the record must be filed within fourteen (14) days of the filing of the certified administrative record, unless intervention is granted, in which case the request to augment must be filed within fourteen (14) days of the date the order granting intervention is issued. The Hearing Authority may allow the record to be augmented if the requesting party shows that the additional information is material, is relevant to the issues raised in the appeal and that: ()

a. There were good reasons for failure to present the information during the permitting proceeding; or ()

b. There were alleged irregularities in the permitting proceeding and the party wishes to introduce evidence of the alleged irregularities. ()

08. Brief of the Petitioner. Once all requests to augment the record and motions to intervene have been determined, the Hearing Authority shall issue an order notifying the parties that the administrative record has been settled and of the date by which the petitioner must file petitioner's brief in support of the Petition for Review. In addition to meeting the requirements of Subsection 204.06, the brief must include: ()

a. The legal arguments and citations to legal authority that support the allegations in the Petition for Review; and ()

b. The factual support for the allegations in the Petition for Review, including citations to the administrative record. ()

c. A statement regarding whether the party desires an opportunity for oral argument. ()

09. Response Briefs. Unless an alternative date is set by the Hearing Authority, the Department and all other parties must file response briefs within twenty-eight (28) days of the service of the petitioner's brief. In addition to meeting the requirements of Subsection 204.06, the response briefs must include: ()

a. A response to the arguments and assertions in the petitioner's brief (either in support or opposed); ()

b. A citation to all legal authorities and facts in the administrative record relied upon; and ()

c. A statement regarding whether the party desires an opportunity for oral argument. ()

10. Reply Briefs by the Petitioner. Unless an alternative date is set by the Hearing Authority, the petitioner may file a reply brief within fourteen (14) days after service of response briefs. A petitioner may not raise new issues or arguments in the reply. ()

11. Representation of Parties. Unless otherwise authorized or required by law, appearances and representation of parties or other persons shall be as follows: ()

a. A natural person may represent himself or herself or be represented by an attorney or, if the person lacks full legal capacity to act for himself or herself, then by a legal guardian or guardian ad litem or representative of an estate; ()

- b. A general partnership may be represented by a partner or an attorney; ()
- c. A corporation, or any other business entity other than a general partnership, must be represented by an attorney; ()
- d. A municipal corporation, local government agency, unincorporated association or nonprofit organization must be represented by an attorney; or ()
- e. A state, federal or tribal governmental entity or agency must be represented by an attorney. ()

12. Substitution and Withdrawal of Representatives. A party's representative may be changed and a new representative may be substituted by notice to all parties so long as the proceedings are not unreasonably delayed. Representatives who wish to withdraw from a proceeding must immediately file a motion to withdraw representation and serve that motion on the party represented and all other parties. ()

13. Filing and Service Requirements. ()

a. All documents concerning actions governed by these rules must be filed with the Hearing Coordinator at the following address: Hearing Coordinator, Department of Environmental Quality, 1410 N. Hilton, Boise, ID 83706. Documents may also be filed by fax or may be filed electronically. The Hearing Coordinator's fax number and email address for filing electronically are available at www.deq.idaho.gov/petitions-for-review. The documents are deemed to be filed on the date received by the Hearing Coordinator. Upon receipt of the filed document, the Hearing Coordinator will provide confirmation to the originating party. ()

b. All documents subsequent to the petition must be served on all parties or representatives, unless otherwise directed by the Hearing Authority. ()

c. Service of documents on the named representative is valid service upon the party for all purposes in the proceeding. ()

14. Proof of Service. Every document meeting the requirements for service must be attached to or accompanied by proof of service containing the following certificate:

<p>I hereby certify that on this (insert date), a true and correct copy of the foregoing (insert name of document) was served on the following as indicated below:</p> <p>(insert names and addresses of parties and method of delivery (first class U.S. mail, facsimile, hand-delivery, or overnight express))</p> <p>(Signature)</p>

()

15. Motions. A request for an interlocutory or procedural order or other relief must be made by written motion unless these rules prescribe another form. ()

a. A motion must state with particularity the grounds for the motion, the relief sought, and the legal argument necessary to support the motion. In advance of filing a motion, parties must attempt to ascertain whether the other parties concur or object to the motion and must indicate in the motion the attempt made and the response obtained. ()

b. Any party may file a response to a motion. Responses must state with particularity the grounds for opposition and the legal argument necessary to support the motion. The response must be filed within fifteen (15) days after service of the motion unless the Hearing Authority shortens or extends the time for response. ()

c. Any reply to a response must be filed within ten (10) days after service of the response. A reply must not introduce any new issues or arguments and may respond only to matters presented in the response. ()

d. The Hearing Authority may act on a motion for a procedural order at any time without awaiting a response. ()

e. Parties must file motions for extensions of time sufficiently in advance of the due date to allow other parties to have a reasonable opportunity to respond to the request for more time and to provide the Hearing Authority with a reasonable opportunity to issue an order prior to the due date. ()

16. Oral Argument. The Hearing Authority may hold oral argument on its own initiative or at its discretion in response to a request by one or more of the parties. ()

17. Withdrawal of Permit or Portions of Permit by the Department. The Department may, at any time, upon notification to the Hearing Authority and all parties, withdraw the permit or specified portions of the permit and prepare a new draft permit under Section 108 (Draft Permit and Fact Sheet) addressing the portions so withdrawn. The new draft permit must proceed through the same process of public comment and opportunity for a public meeting as would apply to any other draft permit. If applicable, any portions of the permit that are not withdrawn continue to apply, unless stayed under Sections 205 (Contested Permit Conditions) and 206 (Stays of Contested Permit Conditions). The appeal shall continue with respect to those portions of the permit that are contested in the appeal that the Department does not withdraw. ()

18. Request to Dismiss Petition. The petitioner, by motion, may request to have the Hearing Authority dismiss its appeal. The motion must briefly state the reason for its request. ()

19. Burden of Proof. The petitioner has the burden of proving the allegations in the Petition for Review. Factual allegations must be proven by a preponderance of the evidence. ()

20. Appointment of Hearing Officers. The Hearing Authority shall be a Hearing Officer appointed by the Director from a pool of Hearing Officers approved by the Board. Hearing Officers should be persons with technical expertise or experience in the issues involved in IPDES appeals. Notice of appointment of a Hearing Officer shall be served on all parties. No Hearing Officer shall be appointed that has a conflict of interest as defined in 40 CFR 123.25(c). ()

21. Scope of Authority of the Hearing Authority. The Hearing Authority shall have the following authority: ()

a. The authority to set schedules and take such other actions to ensure an efficient and orderly adjudication of the issues raised in the Petition for Review; ()

b. The authority to hear and decide motions; and ()

c. The authority to issue an order that decides the issues raised in the appeal and includes findings of fact and conclusions of law. The required contents of an order are set forth in Subsection 204.24. ()

22. Ex Parte Communications. The Hearing Authority shall not communicate, directly or indirectly, regarding any substantive issue in the permit appeal with any party, except upon notice and opportunity for all parties to participate in the communication. The Hearing Authority may communicate ex parte with a party concerning procedural matters (e.g., scheduling). When the Hearing Authority becomes aware of a written ex parte communication regarding any substantive issue from a party or representative of a party during an appeal, the Hearing Authority shall place a copy of the communication in the file for the case and order the party providing the written communication to serve a copy of the written communication upon all parties of record. Written communications from a party showing service upon all other parties are not ex parte communications. ()

23. Alternative Dispute Resolution. Parties to the permit appeal may agree to use a means of alternative dispute resolution. ()

24. Final Orders. ()

a. Final orders are issued by the Hearing Authority upon review of the petitions, briefs and the

- administrative record on appeal. ()
- b.** Every final order shall contain the following: ()
 - i.** A reasoned statement in support of the decision; ()
 - ii.** Findings of fact, with reference to the portions of the administrative record that support the findings. The findings of fact must be based exclusively on the administrative record, or if augmented during the appeal, the augmented record; ()
 - iii.** Conclusions of law with respect to legal issues raised in the appeal; ()
 - iv.** The final order shall either affirm the permitting decision, or vacate and remand the decision to the Department with instructions; and ()
 - v.** A statement of the right to judicial review as set forth in Section 204.26. ()
 - c.** Motions for reconsideration of any final order shall not be considered. ()
- 25. Final Agency Action for Purposes of Judicial Review.** ()
- a.** Filing a Petition for Review is a prerequisite to seeking judicial review of the Department’s permitting decision. ()
 - b.** For purposes of judicial review under Sections 39-107 and 67-5270, Idaho Code, final agency action or determination regarding an appeal of a permit occurs when a final order that affirms the Department’s permitting decision is issued. ()
 - c.** An order that vacates and remands the decision to the Department with instructions is not a final agency action for purposes of judicial review. ()
- 26. Petition for Judicial Review.** ()
- a.** Any person aggrieved by a final agency action or determination by the Department as defined in Subsection 204.25 has a right to judicial review by filing a petition for judicial review. ()
 - b.** The petition for judicial review must be filed with the Hearing Coordinator as set out in Subsection 204.13 and with the district court and served on all parties. The petition for judicial review shall also be served upon the Hearing Authority, the Director of the Department, and upon the Attorney General of the State of Idaho. Pursuant to Section 67-5272, Idaho Code, petitions for judicial review may be filed in the District Court of the county in which: ()
 - i.** The hearing was held; ()
 - ii.** The final agency action was taken; ()
 - iii.** The party seeking review of the agency action resides; or ()
 - iv.** The real property or personal property that was the subject of the agency action is located. ()
 - c.** Pursuant to Section 67-5273, Idaho Code, a petition for judicial review of a final agency action must be filed within twenty-eight (28) days of the service date of a final order issued by the Hearing Authority. ()
- 27. IPDES General Permits.** ()
- a.** Persons affected by an IPDES general permit may not file a petition under this section or otherwise

challenge the conditions of a general permit in further Department proceedings. Instead, they may do either of the following: ()

- i. Challenge the conditions in a general permit by filing an action in court; or ()
- ii. Apply for an individual IPDES permit under Section 105 (Application for an Individual IPDES Permit), as authorized in Section 130 (General Permits), and may then petition the Hearing Authority to review the individual permit as provided in these rules. ()

b. As provided in Subsection 130.05.c., any interested person may also petition the Department to require an individual IPDES permit for any discharger eligible for authorization to discharge under an IPDES general permit. ()

c. The Department’s decision to terminate, revoke or deny coverage under a general permit and to require application for an individual permit may be appealed pursuant to the provisions of Section 204 (Appeals Process). ()

28. Appeals of Variances. ()

a. When the Department issues a permit on which EPA has made a variance decision, separate appeals of the Department permit and of the EPA variance decision are possible. If the owner or operator is challenging the same issues in both proceedings, the EPA Region 10 Administrator will decide, in consultation with the Department, which case will be heard first. ()

b. Variance decisions made by EPA may be appealed under the provisions of 40 CFR 124.19. ()

c. Stays for variances other than Clean Water Act section 301(g) variances are governed by Section 205 (Contested Permit Conditions) and 206 (Stays of Contested Permit Conditions). ()

205. CONTESTED PERMIT CONDITIONS.

01. Force and Effect of Conditions. As provided in Subsection 206.01, if an appeal of a permit decision is filed under Section 204 (Appeals Process), the force and effect of the contested conditions of the permit are stayed until final Department action. The Department must notify the discharger and all interested parties of the uncontested conditions of the permit that are enforceable obligations of the discharger in accordance with Subsection 206.01.c. ()

02. Control Technologies. When effluent limitations are contested, but the underlying control technology is not, the notice must identify the installation of the technology in accordance with the permit compliance schedules as an uncontested, enforceable obligation of the permit. ()

03. Combination of Technologies. When a combination of technologies is contested, but a portion of the combination is not contested, that portion must be identified as uncontested if compatible with the combination of technologies proposed by the requester. ()

04. Inseverable Conditions. Uncontested conditions, if inseverable from a contested condition, must be considered contested. ()

05. Enforceable Dates. Uncontested conditions become enforceable thirty (30) days after the date of notice under Subsection 205.01. ()

06. Uncontested Conditions. Uncontested conditions include: ()

a. Preliminary design and engineering studies or other requirements necessary to achieve the final permit conditions which do not entail substantial expenditures; and ()

b. Permit conditions which will have to be met regardless of the outcome of the appeal under Section

204 (Appeals Procedure). ()

206. STAYS OF CONTESTED PERMIT CONDITIONS.

01. Stays. ()

a. If a Petition for Review of an IPDES permit under Section 204 (Appeals Process) is filed, the effect of the contested permit conditions are stayed pending final Department action. Uncontested permit conditions are stayed only until the date specified in Subsection 206.01.b. If the permit involves a new facility or new injection well, new source, new discharger or a recommencing discharger, the applicant will not be issued a permit for the proposed new facility, injection well, source or discharger pending final Department action. ()

b. Uncontested conditions which are not severable from those contested are stayed together with the contested conditions. The Department must identify the stayed provisions of permits for existing facilities, injection wells, and sources. All other provisions of the permit for the existing facility, injection well, or source become fully effective and enforceable thirty (30) days after the date of the notification required in Subsection 206.01.c. ()

c. As soon as possible after receiving notification from the Hearing Coordinator of the filing of a Petition for Review, the Department must notify the Hearing Authority, the applicant, and all other parties of the uncontested (and severable) conditions of the final permit that will become fully effective enforceable obligations of the permit as of the date specified in Subsection 206.01.b., and the notice must comply with the requirements of Section 205 (Contested Permit Conditions). ()

02. Stays Based on Cross Effects. ()

a. The Department may grant a stay based on the grounds that an appeal to the Hearing Authority under Section 204 (Appeals Process) of one permit may result in changes to another Department-issued IPDES permit only when each of the permits involved has been appealed to the Department. ()

b. No stay of an EPA-issued NPDES permit may be granted based on the staying of any Department-issued IPDES permit except at the discretion of the EPA Region 10 Administrator and only upon written request from the Department. ()

03. Permittee Responsibilities. Any facility or activity holding an existing permit must: ()

a. Comply with the conditions of that permit during any modification or revocation and reissuance proceeding under Section 201 (Modification, or Revocation and Reissuance of IPDES Permits); and ()

b. To the extent conditions of any new permit are stayed under this section, comply with the conditions of the existing permit which correspond to the stayed conditions, unless compliance with the existing conditions would be technologically incompatible with compliance with other conditions of the new permit which have not been stayed. ()

207. -- 299. (RESERVED)

300. CONDITIONS APPLICABLE TO ALL PERMITS.

The following conditions apply to all IPDES permits. Additional conditions applicable to IPDES permits are in Sections 301 (Permit Conditions for Specific Categories), 302 (Establishing Permit Provisions), and 40 CFR 122.42(e). All conditions applicable to IPDES permits will be incorporated into the permits either expressly or by reference. If incorporated by reference, a specific citation must be given in the permit. ()

01. Duty to Comply. The permittee must comply with all conditions of the permit. ()

a. Any permit noncompliance constitutes a violation of Idaho law, the Clean Water Act, and is grounds for: ()

i. Enforcement action; ()

ii. Permit termination, revocation and reissuance, or modification; or ()

iii. Denial of a permit renewal application. ()

b. The permittee shall comply with effluent standards or prohibitions established under the Clean Water Act section 307(a) for toxic pollutants and with standards for sewage sludge use or disposal established under the Clean Water Act section 405(d), Section 380 (Sewage Sludge) of these rules, and IDAPA 58.01.16.650, “Wastewater Rules,” within the time provided in the regulations that establish these standards or prohibitions or standards for sewage sludge use or disposal, even if the permit has not yet been modified to incorporate the requirement. ()

02. Duty to Reapply. If the permittee wishes to continue an activity regulated by the permit after the expiration date of the permit, the permittee must apply for and obtain a new permit. If the permittee complies with the application requirements of Section 105 (Application for an Individual IPDES Permit), or the notice of intent requirements of Section 130 (General Permits) for a general permit, and a permit is not issued prior to the permit’s expiration date, the permit shall remain in force as stipulated in Subsections 101.02 and 101.03. ()

03. Need to Halt or Reduce Activity. In an enforcement action, a permittee may not assert as a defense that compliance with the conditions of the permit would have made it necessary for the permittee to halt or reduce the permitted activity. ()

04. Duty to Mitigate. The permittee shall take all reasonable steps to minimize or prevent any discharge or sludge use or disposal in violation of the permit which has a reasonable likelihood of adversely affecting human health or the environment. ()

05. Proper Operation and Maintenance. The permittee shall at all times properly operate and maintain all facilities and systems of treatment and control (and related appurtenances) which are installed or used by the permittee to achieve compliance with the conditions of the permit. ()

a. Proper operation and maintenance also includes adequate laboratory controls and appropriate quality assurance procedures. ()

b. This provision requires the operation of back-up or auxiliary facilities or similar systems which are installed by a permittee only when the operation is necessary to achieve compliance with the conditions of the permit or are required by IDAPA 58.01.16 “Wastewater Rules.” ()

06. Permit Actions. The permit may be modified, revoked and reissued, or terminated for cause. The filing of a request by the permittee for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance does not stay any permit condition. ()

07. Property Rights. The permit does not convey any property rights of any sort, or any exclusive privilege. ()

08. Duty to Provide Information. The permittee shall furnish to the Department, within a reasonable time, any information which the Department may request to determine whether cause exists for modifying, revoking and reissuing, or terminating the permit or to determine compliance with the permit. The permittee shall also furnish to the Department upon request, copies of records required to be kept by the permit. ()

09. Inspection and Entry. The permittee shall provide the Department’s inspectors, or authorized representatives, including authorized contractors acting as representatives of the Department, upon presentation of credentials and other documents as may be required by law, access to: ()

a. Enter upon the permittee's premises where a regulated facility or activity is located or conducted, or where records must be kept under the conditions of the permit; ()

b. Any records that must be kept under the conditions of the permit and, at reasonable times, to copy

such records; ()

c. Inspect, at reasonable times, any facilities, equipment (including monitoring and control equipment), practices, or operations regulated or required under the permit; and ()

d. Sample or monitor at reasonable times, for the purposes of assuring permit compliance or as otherwise authorized by the Clean Water Act, any substances or parameters at any location. ()

10. Monitoring and Records. A permittee must comply with the following monitoring and recordkeeping conditions: ()

a. Samples and measurements taken for the purpose of monitoring shall be representative of the monitored activity. ()

b. The permittee shall retain the following records: ()

i. All monitoring information, for a period of at least three (3) years from the date of the sample, measurement, report or application. This period may be extended by request of the Department at any time; and ()

ii. The permittee's sewage sludge use and disposal activities shall be retained for a period of at least five (5) years or longer as required by 40 CFR Part 503. ()

c. Records of monitoring information shall include: ()

i. All calibration and maintenance records; ()

ii. All original strip chart recordings for continuous monitoring instrumentation or other forms of data approved by the Department; ()

iii. Copies of all reports required by the permit; ()

iv. Records of all data used to complete the application or notice of intent for the permit; ()

v. The date, exact place, and time of sampling or measurements; ()

vi. The name of any individual(s) who performed the sampling or measurements; ()

vii. The date(s) any analyses were performed; ()

viii. The name of any individual(s) who performed the analyses; ()

ix. The analytical techniques or methods used; and ()

x. The results of the analysis. ()

d. Monitoring must be conducted according to test procedures approved under 40 CFR Part 136 unless another test method is required by 40 CFR Part 401 through 471 or Part 501 through 503. ()

11. Signatory Requirements. All applications, reports, or information submitted to the Department shall be signed and certified in accordance with Section 090 (Signature Requirements) and must include penalty provisions pursuant to Section 500 (Enforcement). ()

12. Reporting Requirements. ()

a. The permittee must give notice to the Department as soon as possible of any planned physical alterations or additions to the permitted facility if: ()

i. The alteration or addition to a permitted facility may meet one (1) of the criteria for determining whether a facility is a new source as defined in Section 120 (New Sources and New Discharges) and 010 (Definitions); ()

ii. The alteration or addition could significantly change the nature or increase the quantity of pollutants discharged. This notification applies to pollutants which are subject neither to effluent limitations in the permit, nor to notification requirements under Subsection 301.01.a.; or ()

iii. The alteration or addition results in a significant change in the permittee's sludge use or disposal practices, and such alteration, addition, or change may justify the application of permit conditions that are different from or absent in the existing permit, including notification of additional use or disposal sites: ()

(1) Not reported during the permit application process, or ()

(2) Not reported pursuant to an approved land application or sludge disposal plan. ()

b. The permittee must give advance notice to the Department of any planned changes in the permitted facility or activity which may result in noncompliance with permit requirements. ()

c. The permit is not transferable to any person except after notice to the Department. The Department may modify or revoke and reissue a permit to change the name of the permittee and incorporate such other requirements as may be necessary under Section 202 (Transfer of IPDES Permits). ()

d. Monitoring results must be reported at the intervals specified in the permit and meet the following requirements: ()

i. Monitoring results will be reported on a Discharge Monitoring Report (DMR) or forms (which may be electronic) provided or specified by the Department for reporting results of monitoring of sludge use or disposal practices. All reports and forms submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, permittees may be required to report electronically if specified by a particular permit. ()

ii. If the permittee monitors any pollutant more frequently than required by the permit using test procedures approved under 40 CFR Part 136, or another method required for an industry-specific waste stream specified in the permit or under 40 CFR Part 401 through 471 or Part 501 through Part 503, the results of such monitoring will be included in the calculation and reporting of the data submitted in the DMR or sludge reporting form specified by the Department. ()

iii. Calculations for all limitations which require averaging of measurements will utilize an arithmetic mean unless otherwise specified by the Department in the permit. ()

e. A permittee must submit reports of compliance or noncompliance with, or any progress reports on, interim and final requirements contained in any compliance schedule of the permit no later than fourteen (14) days following each schedule date of each requirement. As of December 21, 2020, all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section. ()

f. The permittee must report to the Department any noncompliance which may endanger health or the environment as follows: ()

i. Within twenty-four (24) hours from the time the permittee becomes aware of the circumstances, provide any information orally; ()

ii. Within five (5) days from the time the permittee becomes aware of the circumstances, provide a written submission that contains a description of: ()

(1) The noncompliance and its cause; ()

(2) The period of noncompliance, including exact dates and times; ()

(3) If the noncompliance has not been corrected, the anticipated time it is expected to continue; and ()

(4) Steps taken or planned to reduce, eliminate, and prevent reoccurrence of the noncompliance; ()

(5) For noncompliance events related to combined sewer overflows, sanitary sewer overflows, or bypass events, these reports must include the data described in Subsections 300.12.f.ii(1) through (4), as well as the type of event (combined sewer overflows, sanitary sewer overflows, or bypass events), type of sewer overflow structure (e.g., manhole, combine sewer overflow outfall), discharge volumes untreated by the treatment works treating domestic sewage, types of human health and environmental impacts of the sewer overflow event, and whether the noncompliance was related to wet weather. ()

(6) As of December 21, 2020, all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section. ()

iii. The following information must be reported within twenty-four (24) hours: ()

(1) Any unanticipated bypass which exceeds any effluent limitation in the permit (see Subsection 300.07, Property Rights); ()

(2) Any upset which exceeds any effluent limitation in the permit; and ()

(3) Violation of a maximum daily discharge limitation for any of the pollutants listed by the Department in the permit to be reported within twenty-four (24) hours (see Subsection 302.09, Twenty-Four Hour Reporting); and ()

iv. The Department may waive the written report on a case-by-case basis for reports under Subsection 300.12.f.iii. if the oral report has been received within twenty-four (24) hours. ()

g. The permittee must report all instances of noncompliance not reported under Subsections 300.12.d., e., and f., at the time monitoring reports are submitted. The reports of noncompliance must contain the information listed in Subsection 300.12.f. As of December 21, 2020, all reports related to combined sewer overflows, sanitary sewer overflows, or bypass events submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, permittees may be required to electronically submit reports related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section by a particular permit. The Director may also require permittees to electronically submit reports not related to combined sewer overflows, sanitary sewer overflows, or bypass events under this section. ()

h. Where the permittee becomes aware that it failed to submit any relevant facts in a permit application, or submitted incorrect information in a permit application or in any report to the Department, it must promptly submit such facts or correct information. ()

13. Bypass Terms and Conditions. ()

a. Bypass, as defined in Section 010 (Definitions), is prohibited, and the Department may take enforcement action against a permittee for bypass, unless: ()

i. The bypass was unavoidable to prevent loss of life, personal injury, or severe property damage; ()

ii. There were no feasible alternatives to the bypass, such as the use of auxiliary treatment facilities, retention of untreated wastes, or maintenance during normal periods of equipment downtime. This condition is not satisfied if adequate back-up equipment should have been installed in the exercise of reasonable engineering judgment to prevent a bypass which occurred during normal periods of equipment downtime or preventive maintenance; and ()

iii. The permittee submitted a notice of a bypass to the Department in accordance with Subsections 300.13.c. and d. As of December 21, 2020, all notices submitted in compliance with this section must be submitted electronically by the permittee to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of CFR Part 127, permittees may be required to report electronically if specified by a particular permit. ()

b. The Department may approve an anticipated bypass, after considering its adverse effects, if the Department determines that it will meet the three (3) conditions listed in Subsection 300.13.a. ()

c. If the permittee knows in advance of the need for a bypass, it shall submit prior notice to the Department, if possible at least ten (10) days before the date of the bypass. ()

d. The permittee shall submit notice of an unanticipated bypass as required in Subsection 300.12.f. (24-hour notice). ()

e. Bypasses not exceeding limitations, are allowed to occur, and are not subject to Subsection 300.13.a. or 300.13.d. if: ()

i. The bypass does not cause effluent limitations to be exceeded, and ()

ii. Only if it also is for essential maintenance to assure efficient operation. ()

14. Upset Terms and Conditions. ()

a. In any enforcement action for noncompliance with technology-based permit effluent limitations, a permittee may claim upset, as defined in Section 010 (Definitions), as an affirmative defense. A permittee seeking to establish the occurrence of an upset has the burden of proof. ()

b. Any determination made in administrative review of a claim that noncompliance was caused by upset, before an action for noncompliance is commenced, is not final administrative action subject to judicial review. ()

c. The following conditions are necessary for a permittee to demonstrate that an upset occurred. A permittee who wishes to establish the affirmative defense of upset must demonstrate, through properly signed, contemporaneous operating logs, or other relevant evidence that: ()

i. An upset occurred and that the permittee can identify the cause(s) of the upset; ()

- ii. The permitted facility was at the time being properly operated; ()
- iii. The permittee submitted twenty-four (24)-hour notice of the upset as required Subsection 300.12.f.iii(2); and ()
- iv. The permittee complied with any remedial measures required under Subsection 300.04. ()

15. Penalties and Fines. Permits must include penalty and fine requirements pursuant to Section 500 (Enforcement). ()

301. PERMIT CONDITIONS FOR SPECIFIC CATEGORIES.

In addition to conditions set forth in Section 300 (Conditions Applicable to all Permits), conditions identified in this section apply to all IPDES permits within the categories specified below. ()

01. Existing Manufacturing, Commercial, Mining, and Silvicultural Dischargers. In addition to the reporting requirements under Subsection 300.12, all existing manufacturing, commercial, mining, and silvicultural dischargers must notify the Department as soon as they know or have reason to believe: ()

a. That any activity has occurred or will occur which would result in the discharge, on a routine or frequent basis, of any toxic pollutant which is not limited in the permit if that discharge will exceed the highest of the following notification levels: ()

- i. One hundred micrograms per liter (100 µg/L); ()
- ii. Two hundred micrograms per liter (200 µg/L) for acrolein and acrylonitrile; ()
- iii. Five hundred micrograms per liter (500 µg/L) for 2,4-dinitrophenol and for 2-methyl-4,6-dinitrophenol; and ()
- iv. One milligram per liter (1 mg/L) for antimony; ()
- v. Five (5) times the maximum concentration value reported for that pollutant in the permit application in accordance with Subsection 105.07; or ()
- vi. The level established by the Department in accordance with Subsection 302.08; and ()

b. That any activity has occurred or will occur which would result in any discharge, on a non-routine or infrequent basis, of a toxic pollutant which is not limited in the permit if that discharge will exceed the highest of the following notification levels: ()

- i. Five hundred micrograms per liter (500 µg/L); ()
- ii. One milligram per liter (1 mg/L) for antimony; ()
- iii. Ten (10) times the maximum concentration value reported for that pollutant in the permit application in accordance with Subsection 105.07; or ()
- iv. The level established by the Department in accordance with Subsection 302.08. ()

02. Publicly Owned Treatment Works. All POTWs must provide adequate notice to the Department of the following: ()

a. Any new introduction of pollutants into the POTW from an indirect discharger which would be subject to the Clean Water Act section 301 or 306 if it were directly discharging those pollutants; and ()

b. Any substantial change in the volume or character of pollutants being introduced into that POTW

by a source introducing pollutants into the POTW at the time of issuance of the permit. For purposes of this subsection, adequate notice shall include information on: ()

- i. The quality and quantity of effluent introduced into the POTW, and ()
- ii. Any anticipated impact of the change on the quantity or quality of effluent to be discharged from the POTW. ()

03. Municipal Separate Storm Sewer Systems. The operator of a large or medium municipal separate storm sewer system or a municipal separate storm sewer that has been designated by the Department under 40 CFR 122.26(a)(1)(v) must submit an annual report by the anniversary of the date of the issuance of the permit for such system. As of December 21, 2020, all reports submitted in compliance with this section must be submitted electronically by the owner, operator, or the duly authorized representative of the MS4 to the Department in compliance with this section and 40 CFR Part 127 unless waived pursuant to 40 CFR 127.15. 40 CFR Part 127 is not intended to undo existing requirements for electronic reporting. Prior to this date, and independent of 40 CFR Part 127, the owner, operator, or the duly authorized representative of the MS4 may be required to report electronically if specified by a particular permit. The report shall include: ()

- a. The status of implementing the components of the storm water management program that are established as permit conditions; ()
- b. Proposed changes to the storm water management programs that are established as permit conditions. Such proposed changes shall be consistent with Subsection 105.18.b.iii.; ()
- c. Revisions, if necessary, to the assessment of controls and the fiscal analysis reported in the permit application under Subsection 105.18.b.iv. and 105.18.b.v.; ()
- d. A summary of data, including monitoring data, that is accumulated throughout the reporting year; ()
- e. Annual expenditures and budget for the year following each annual report; ()
- f. A summary describing the number and nature of enforcement actions, inspections, and public education programs; and ()
- g. Identification of water quality improvements or degradation. ()

04. Storm Water Dischargers. The initial permits for discharges composed entirely of storm water issued pursuant to 40 CFR 122.26(e)(7) shall require compliance with the conditions of the permit as expeditiously as practicable but in no event later than three (3) years after the date of issuance of the permit. ()

05. Concentrated Animal Feeding Operations (CAFOs). Any applicable permit must include provisions pursuant to 40 CFR 122.42(e). ()

302. ESTABLISHING PERMIT PROVISIONS.

The Department will establish conditions, as required on a case-by-case basis, to provide for and ensure compliance with all applicable requirements of the Clean Water Act and state rules, including conditions under Section 101 (duration of permits), Section 305 (compliance schedules), Section 304 (monitoring), and electronic reporting requirements identified under 40 CFR Part 127. An IPDES permit must include conditions meeting the following requirements, when applicable, in addition to other applicable sections of these rules. ()

01. Incorporation. All permit conditions shall be incorporated either expressly or by reference. If incorporated by reference, a specific citation to the applicable regulations or requirements must be given in the permit. ()

02. Applicable Requirements. The Department shall establish conditions, as required on a case-by-case basis, to provide for and assure compliance with all applicable requirements of the Clean Water Act and Section

101 (Duration), and Subsections 304.01, and 305.01 of these rules. ()

a. Applicable requirements include all statutory or regulatory requirements which take effect prior to final administrative disposition of the permit. ()

b. Applicable requirements also include any requirement which takes effect prior to the modification or revocation and reissuance of a permit under Section 201 (Modification, or Revocation and Reissuance of IPDES Permits). ()

c. New or reissued permits, and to the extent allowed under Section 201 (Modification, or Revocation and Reissuance of IPDES Permits) for modified or revoked and reissued permits, shall incorporate each of the applicable requirements referenced in Sections 200 (Renewal of IPDES Permits), and 302 (Establishing Permit Provisions) through 304 (Monitoring and Reporting Requirements). ()

03. Technology-Based Effluent Limitations and Standards. ()

a. Technology-based effluent limitations and standards shall be based on: ()

i. Effluent limitations and standards promulgated under the Clean Water Act section 301; ()

ii. New source performance standards promulgated under the Clean Water Act section 306; ()

iii. Effluent limitations determined on a case-by-case basis under the Clean Water Act section 402(a)(1); or ()

iv. A combination of the three (3), in accordance with 40 CFR 125.3. ()

b. For new sources or new dischargers, these technology based limitations and standards are subject to the provisions of 40 CFR 122.29(d). ()

c. The Department may authorize a discharger, subject to technology-based effluent limitations guidelines and standards in an IPDES permit, to forgo sampling of a pollutant found at 40 CFR Parts 401 through 471, if the discharger has demonstrated through sampling and other technical factors that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger. ()

i. This waiver is good only for the term of the permit and is not available during the term of the first NPDES or IPDES permit issued to a discharger. ()

ii. Any request for this waiver must be submitted when applying for a reissued permit or modification of a reissued permit. The request must demonstrate through sampling or other technical information, including information generated during an earlier permit term that the pollutant is not present in the discharge or is present only at background levels from intake water and without any increase in the pollutant due to activities of the discharger. ()

iii. Any grant of the monitoring waiver must be included in the permit as an express permit condition and the reasons supporting the grant must be documented in the permit's fact sheet. ()

iv. This provision does not supersede certification processes and requirements already established in existing effluent limitations guidelines and standards. ()

04. Other Effluent Limitations and Standards. ()

a. If any applicable toxic effluent limitations and standards under the Clean Water Act sections 301, 302, 303, 307, 318, and 405 or prohibition (including any schedule of compliance specified in such effluent standard or prohibition) is promulgated under the Clean Water Act section 307(a) for a toxic pollutant and that standard or prohibition is more stringent than any limitation on the pollutant in the permit, the Department shall initiate

proceedings under Section 201 (Modification, or Revocation and Reissuance of IPDES Permits) to modify or revoke and reissue the permit to conform to the more stringent toxic effluent standard or prohibition (see also Subsection 300.01). ()

b. Standards for sewage sludge use or disposal under the Clean Water Act section 405(d), Section 380 (Sewage Sludge) of these rules, and IDAPA 58.01.16.650, “Wastewater Rules,” shall be applied, unless those standards have been included in a permit issued under the appropriate provisions of: ()

i. Subtitle C of the Solid Waste Disposal Act; ()

ii. Part C of Safe Drinking Water Act; ()

iii. The Clean Air Act; or ()

iv. State permit programs approved by the EPA. ()

c. When there are no applicable standards for sewage sludge use or disposal, the permit may include requirements developed on a case-by-case basis to protect public health and the environment from any adverse effects which may occur from toxic pollutants in sewage sludge. ()

d. If any applicable standard for sewage sludge use or disposal is promulgated under the Clean Water Act section 405(d), Section 380 (Sewage Sludge) of these rules, and IDAPA 58.01.16.650, “Wastewater Rules,” that standard is more stringent than any limitation on the pollutant or practice in the permit, the Department may initiate proceedings under these regulations to modify or revoke and reissue the permit, in compliance with Section 201 (Modification, or Revocation and Reissuance of IPDES Permits), to conform to the standard for sewage sludge use or disposal. ()

e. Include any requirements applicable to cooling water intake structures under the Clean Water Act section 316(b), in accordance with 40 CFR 125.80 through 125.99. ()

05. Reopener Clause. For any permit issued to a TWTDS (including sludge-only facilities), the Department shall include a reopener clause to incorporate any applicable standard for sewage sludge use or disposal promulgated under the Clean Water Act section 405(d). The Department may promptly modify or revoke and reissue any permit containing the reopener clause required by this subsection if the standard for sewage sludge use or disposal: ()

a. Is more stringent than any requirements for sludge use or disposal in the permit, or ()

b. Controls a pollutant or practice not limited in the permit. ()

06. Water Quality Standards and Requirements. Any requirements in addition to or more stringent than promulgated effluent limitations guidelines or standards under the Clean Water Act sections 301, 304, 306, 307, 318 and 405 shall be included in a permit if they are necessary to: ()

a. Achieve water quality standards established in IDAPA 58.01.02, “Water Quality Standards,” including narrative criteria for water quality and antidegradation provisions. ()

i. Effluent limitations in a permit must control all pollutants or pollutant parameters (either conventional, nonconventional, or toxic pollutants) which the Department determines are or may be discharged at a level which will cause, have the reasonable potential to cause, or contribute to an excursion above any water quality standard, including narrative criteria for water quality. ()

ii. When the Department determines whether a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative or numeric criteria within a water quality standard, the Department shall use procedures which account for: ()

(1) Existing controls on point and nonpoint sources of pollution; ()

- (2) The variability of the pollutant or pollutant parameter in the effluent; ()
- (3) The sensitivity of the species to toxicity testing (when evaluating whole effluent toxicity); and where appropriate, ()
- (4) The dilution of the effluent in the receiving water; ()
- iii. When the Department determines, using the procedures in Subsection 302.06.a.ii., that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the allowable ambient concentration of a state numeric criteria within a state water quality standard for an individual pollutant, the permit must contain effluent limits for that pollutant. ()
- iv. When the Department determines, using the procedures in Subsection 302.06.a.ii., that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above the numeric criterion for whole effluent toxicity, the permit must contain effluent limits for whole effluent toxicity. ()
- v. Except as provided in this subsection, when the Department determines, using the procedures in Subsection 302.06.a.ii., toxicity testing data, or other information, that a discharge causes, has the reasonable potential to cause, or contributes to an in-stream excursion above a narrative criterion within an applicable water quality standard, the permit must contain effluent limits for whole effluent toxicity. Limits on whole effluent toxicity are not necessary where the Department demonstrates in the fact sheet of the IPDES permit, using the procedures in Subsection 302.06.a.ii., that chemical-specific limits for the effluent are sufficient to attain and maintain applicable numeric and narrative state water quality standards. ()
- vi. When the state has not established a numeric water quality criterion for a specific chemical pollutant that is present in an effluent at a concentration that causes, has the reasonable potential to cause, or contributes to an excursion above a narrative criterion within an applicable state water quality standard, the Department must establish effluent limits using one (1) or more of the following options: ()
 - (1) Establish effluent limits using a calculated numeric water quality target or concentration value for the pollutant which the Department demonstrates will attain and maintain applicable narrative water quality criteria and will fully protect the designated use. Such a target or concentration value may be derived: ()
 - (a) Using a proposed criterion, or an explicit policy or regulation interpreting its narrative water quality criterion, and ()
 - (b) Supplemented with other relevant information which may include EPA's Water Quality Standards Handbook, as currently revised, risk assessment data, exposure data, information about the pollutant from the Food and Drug Administration (FDA), and current EPA criteria documents; ()
 - (2) Establish effluent limits on a case-by-case basis, using EPA's water quality criteria, published under the Clean Water Act section 304(a), supplemented where necessary by other relevant information; or ()
 - (3) Establish effluent limitations on an indicator parameter for the pollutant of concern, provided: ()
 - (a) The permit identifies which pollutants are intended to be controlled by the use of the effluent limitation; ()
 - (b) The required fact sheet sets forth the basis for the limit, including a finding that compliance with the effluent limit on the indicator parameter will result in controls on the pollutant of concern which are sufficient to attain and maintain applicable water quality standards; ()
 - (c) The permit requires all effluent and ambient monitoring necessary to show that during the term of the permit the limit on the indicator parameter continues to attain and maintain applicable water quality standards; and ()

(d) The permit contains a reopener clause allowing the Department to modify or revoke and reissue the permit if the limits on the indicator parameter no longer attain and maintain applicable water quality standards. ()

vii. When developing water quality-based effluent limits under this subsection, the Department shall ensure that: ()

(1) The level of water quality to be achieved by limits on point sources established under this subsection is derived from, and complies with all applicable water quality standards; and ()

(2) Effluent limits developed to protect a narrative water quality criterion, a numeric water quality criterion, or both, are consistent with the assumptions and requirements of any available wasteload allocation for the discharge prepared by the state and approved by EPA pursuant to 40 CFR 130.7; ()

b. Attain or maintain a specified water quality through water quality related effluent limits established under the Clean Water Act section 302; ()

c. Conform to applicable water quality requirements under the Clean Water Act section 402(b)(5) when the discharge affects a state other than Idaho; ()

d. Incorporate any more stringent limitations, treatment standards, or schedules of compliance requirements established under federal or state law or regulations in accordance with the Clean Water Act section 301(b)(1)(C); ()

e. Ensure consistency with the requirements of a Water Quality Management plan approved by EPA under the Clean Water Act section 208(b); or ()

f. Incorporate alternative effluent limitations or standards where warranted by fundamentally different factors, under 40 CFR 125.30 through 125.32. ()

07. Technology-Based Controls for Toxic Pollutants. ()

a. In determining whether to include limitations on toxic pollutants in a permit under this section, the Department will establish limits in accordance with Subsections 302.03, 302.04, and 302.06 and in a notification under Section 301 (Permit Conditions for Specific Categories), or other relevant information. The fact sheet must explain the development of limitations included in the permit. ()

b. An IPDES permit must include limitations to control all toxic pollutants which the Department determines (based on information reported in a permit application under Subsection 105.07 and 301.01.a., or on other information) are or may be discharged at a level greater than the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under 40 CFR 125.3(c). ()

c. The requirement that the limitations control the pollutants meeting the criteria of Subsection 302.07.b. will be satisfied by: ()

i. Limitations on those toxic pollutants; or ()

ii. Limitations on other pollutants which, in the judgment of the Department, will provide treatment of the pollutants under Subsection 302.07.b. to the levels required by 40 CFR 125.3(c). ()

08. Notification Level. An IPDES permit must include a condition requiring a notification level which exceeds the notification level of Subsection 301.01.a., upon a petition from the permittee or on the Department's initiative. This new notification level may not exceed the level which can be achieved by the technology-based treatment requirements appropriate to the permittee under 40 CFR 125.3(c). ()

09. Twenty-Four (24) Hour Reporting. A permit will list pollutants for which the permittee is

required to report violations of maximum daily discharge limitations within twenty-four (24) hours under Subsection 300.12.f.iii(3), including any toxic pollutant or hazardous substance, or any pollutant specifically identified as the method to control a toxic pollutant or hazardous substance. ()

10. Permit Durations. Permits must include permit durations pursuant to Subsection 101.01. ()

11. Monitoring Requirements. Permits must include monitoring requirements pursuant to Section 304 (Monitoring and Reporting Requirements). ()

12. Pretreatment Program for POTWs. A POTW permit must include pretreatment program conditions requiring the permittee to: ()

a. Identify, in terms of character and volume of pollutants, any Significant Industrial Users discharging into the POTW subject to Pretreatment Standards under the Clean Water Act section 307(b) and 40 CFR Part 403; ()

b. Submit a local program when required by and in accordance with 40 CFR Part 403, to ensure compliance with pretreatment standards to the extent applicable under the Clean Water Act section 307(b): ()

i. The local program shall be incorporated into the permit as described in 40 CFR Part 403, and ()

ii. The program must require all indirect dischargers to the POTW to comply with the reporting requirements of 40 CFR Part 403; ()

c. Provide written technical evaluation of the need to revise local limits under 40 CFR 403.5(c)(1), following permit issuance or reissuance; and ()

d. POTWs which are sludge-only facilities, are required to develop a pretreatment program under 40 CFR Part 403, when the Department determines that a pretreatment program is necessary to assure compliance with the Clean Water Act section 405(d). ()

13. Best Management Practices. An IPDES permit must include best management practices (BMPs) to control or abate the discharge of pollutants when: ()

a. Authorized under the Clean Water Act section 304(e) for the control of toxic pollutants and hazardous substances from ancillary industrial activities; ()

b. Authorized under the Clean Water Act section 402(p) for the control of storm water discharges; ()

c. Numeric effluent limitations are infeasible; or ()

d. The practices are reasonably necessary to achieve effluent limitations and standards or to carry out the purposes and intent of the Clean Water Act. ()

14. Reissued Permits. When a permit is renewed or reissued, it must include provisions pursuant to Section 200 (Renewal of IPDES Permits). ()

15. Privately-Owned Treatment Works. For a privately owned treatment works, any conditions expressly applicable to any user, as a limited co-permittee, that may be necessary in the permit issued to the treatment works to ensure compliance with applicable requirements under this section. ()

a. Alternatively, the Department may issue separate permits to the treatment works and to its users, or may require a separate permit application from any user. ()

b. The Department's decision to issue a permit with no conditions applicable to any user, to impose

conditions on one (1) or more users, to issue separate permits, or to require separate applications, and the basis for that decision, shall be stated in the fact sheet for the draft permit for the treatment works. ()

16. Grants. An IPDES permit must include any conditions imposed in grants made by the EPA to POTWs under the Clean Water Act sections 201 and 204, which are reasonably necessary for the achievement of effluent limitations under the Clean Water Act section 301. ()

17. Sewage Sludge. An IPDES permit must include any requirements under the Clean Water Act section 405 governing the disposal of sewage sludge from POTWs or any other TWTDS for any use for which regulations have been established, in accordance with any applicable regulations. ()

18. Navigation. An IPDES permit must include any conditions that the Secretary of the Army considers necessary to ensure that navigation and anchorage will not be substantially impaired, in accordance with Subsection 103.04 and 109.02. ()

19. Qualifying State or Local Programs. ()

a. For storm water discharges associated with small construction activity disturbing one (1) acre or more, but less than five (5) acres as specified in 40 CFR 122.26(b)(15), the Department may include permit conditions that incorporate by reference qualifying state or local erosion and sediment control program requirements. Where a qualifying state or local program does not include one (1) or more of the elements in this subsection, then the Department must include those elements as conditions in the permit. ()

b. A qualifying state or local erosion and sediment control program is one that includes: ()

i. Requirements for construction site operators to implement appropriate erosion and sediment control best management practices; ()

ii. Requirements for construction site operators to control waste such as discarded building materials, concrete truck washout, chemicals, litter, and sanitary waste at the construction site that may cause adverse impacts to water quality; ()

iii. Requirements for construction site operators to develop and implement a storm water pollution prevention plan, which must include: ()

(1) Site descriptions; ()

(2) Descriptions of appropriate control measures; ()

(3) Copies of approved state or local requirements; ()

(4) Maintenance procedures; ()

(5) Inspection procedures; ()

(6) Identification of non-storm water discharges; and ()

iv. Requirements to submit a site plan for review that incorporates consideration of potential water quality impacts. ()

c. For storm water discharges from a construction activity disturbing five (5) acres or more, including activities that disturb less than five (5) acres but are part of a larger common plan of development or sale that will ultimately disturb five (5) acres or more, as specified in 40 CFR 122.26(b)(14)(x), the Department may include permit conditions that incorporate by reference qualifying state or local erosion and sediment control program requirements. A qualifying state or local erosion and sediment control program is one that includes the elements listed in Subsections 302.19.a. and b. and any additional requirements necessary to achieve the applicable technology-based standards of best available technology and best conventional technology based on the best

professional judgment of the permit writer. ()

20. Water Quality Trading. The Department may include provisions in IPDES permits that allow for compliance with water quality based permit limits to be achieved through water quality trading. ()

303. CALCULATING PERMIT PROVISIONS.

01. Outfalls and Discharge Points. All permit effluent limitations, standards and prohibitions shall be established for each outfall or discharge point of the permitted facility, except as otherwise provided under Subsection 302.13, (Best Management Practices,) and Subsection 303.08, (Internal Waste Streams.) ()

02. Production-Based Limitations. ()

a. In the case of POTWs, permit effluent limitations, standards, or prohibitions shall be calculated based on design flow. ()

b. Except in the case of POTWs or as provided in Subsection 303.02.b.ii., calculation of any permit limitations, standards, or prohibitions which are based on production (or other measure of operation) shall be based upon a reasonable measure of actual production of the facility. ()

i. For new sources or new dischargers, actual production shall be estimated using projected production. The time period of the measure of production shall correspond to the time period of the calculated permit limitations; for example, monthly production shall be used to calculate average monthly discharge limitations. ()

ii. The Department may include a condition establishing alternate permit limitations, standards, or prohibitions based upon anticipated increased (not to exceed maximum production capability) or decreased production levels. ()

iii. For the automotive manufacturing industry only, the Department shall establish an alternate condition under 303.02.b.ii., if the applicant satisfactorily demonstrates to the Department, at the time the application is submitted, that: ()

(1) Its actual production, as indicated in Subsections 303.02.b. and 303.02.b.i. is substantially below maximum production capability, and ()

(2) There is a reasonable potential for an increase above actual production during the duration of the permit. ()

iv. If the Department establishes permit conditions under Subsection 303.02.b.ii.: ()

(1) The permit shall require the permittee to notify the Department at least two (2) business days prior to a month in which the permittee expects to operate at a level higher than the lowest production level identified in the permit. The notice shall specify: ()

(a) The anticipated level, and the period during which the permittee expects to operate at the alternate level; and ()

(b) If the notice covers more than one (1) month, the notice shall specify the reasons for the anticipated production level increase; and ()

(c) New notice of discharge at alternate levels is required to cover a period or production level not covered by prior notice or, if during two (2) consecutive months otherwise covered by a notice, the production level at the permitted facility does not in fact meet the higher level designated in the notice; ()

(2) The permittee shall comply with the limitations, standards, or prohibitions that correspond to the lowest level of production specified in the permit, unless the permittee has notified the Department under Subsection

303.02.b.ii., in which case the permittee shall comply with the lower of the actual level of production during each month or the level specified in the notice; and ()

(3) The permittee shall submit, with the Discharge Monitoring Report, the level of production that actually occurred during each month and the limitations, standards, or prohibitions applicable to that level of production. ()

03. Metals. All permit effluent limitations, standards, or prohibitions for a metal shall be expressed in terms of total recoverable metal as defined in 40 CFR Part 136, unless: ()

a. An applicable effluent standard or limitation has been promulgated under the Clean Water Act and specifies the limitation for the metal in the dissolved or valent or total form; ()

b. In establishing permit limitations on a case-by-case basis under 40 CFR 125.3, it is necessary to express the limitation on the metal in the dissolved or valent or total form to carry out the provisions of the Clean Water Act; or ()

c. All approved analytical methods for the metal inherently measure only its dissolved form (e.g., hexavalent chromium). ()

04. Continuous Discharges. For continuous discharges all permit effluent limitations, standards, and prohibitions, including those necessary to achieve water quality standards, shall, unless impracticable, be stated as: ()

a. Maximum daily and average monthly discharge limitations for all dischargers other than POTWs; or ()

b. Average weekly and average monthly discharge limitations for POTWs. ()

05. Noncontinuous Discharges. Discharges which are not continuous, as defined in Section 010 (Definitions), shall be particularly described and limited, considering the following factors, as appropriate: ()

a. Frequency (for example, a batch discharge shall not occur more than once every three (3) weeks); ()

b. Total mass (for example, not to exceed one hundred (100) kilograms of zinc and two hundred (200) kilograms of chromium per batch discharge); ()

c. Maximum rate of discharge of pollutants during the discharge (for example, not to exceed two (2) kilograms of zinc per minute); and ()

d. Prohibition or limitation of specified pollutants by mass, concentration, or other appropriate measure (for example, shall not contain at any time more than one-tenth (0.1) mg/L zinc or more than two hundred fifty (250) grams (one-fourth (¼) kilogram) of zinc in any discharge). ()

06. Mass Limitations. ()

a. All pollutants limited in permits shall have limitations, standards, or prohibitions expressed in terms of mass except: ()

i. pH, temperature, radiation, or other pollutants which cannot appropriately be expressed by mass; ()

ii. When applicable standards and limitations are expressed in terms of other units of measurement; or ()

iii. If in establishing permit limitations on a case-by-case basis under 40 CFR 125.3, limitations ()

expressed in terms of mass are infeasible because the mass of the pollutant discharged cannot be related to a measure of operation (for example, discharges of TSS from certain mining operations), and permit conditions ensure that dilution will not be used as a substitute for treatment. ()

b. Pollutants limited in terms of mass, may also be limited in terms of other units of measurement, and the permit shall require the permittee to comply with both limitations. ()

07. Pollutant Credits for Intake Water. ()

a. The following definitions apply to the consideration of intake credits in determining reasonable potential and establishing technology based and water quality based effluent limits for IPDES permits. ()

i. An intake pollutant is the amount of a pollutant that is present in waters of the United States (including ground water as provided in Subsection 303.07.a.iv.) at the time water is removed from the same body of water by the discharger or other facility supplying the discharger with intake water. ()

ii. An intake pollutant must be from the same body of water as the discharge in order to be eligible for an intake credit. An intake pollutant is considered to be from the same body of water as the discharge if the Department finds that the intake pollutant would have reached the vicinity of the outfall point in the receiving water within a reasonable period had it not been removed by the permittee. This finding will be established if: ()

(1) The background concentration of the pollutant in the receiving water (excluding any amount of the pollutant in the facility's discharge) is similar to that in the intake water; ()

(2) There is a direct hydrological connection between the intake and discharge points; and ()

(3) Water quality characteristics (e.g., temperature, pH, hardness) are similar in the intake and receiving waters. ()

iii. The Department may also consider other site-specific factors relevant to the transport and fate of the pollutant to make the finding in a particular case that a pollutant would or would not have reached the vicinity of the outfall point in the receiving water within a reasonable period had it not been removed by the permittee. ()

iv. An intake pollutant from ground water may be considered to be from the same body of water if the Department determines that the pollutant would have reached the vicinity of the outfall point in the receiving water within a reasonable period had it not been removed by the permittee, except that such a pollutant is not from the same body of water if the ground water contains the pollutant partially or entirely due to human activity, such as industrial, commercial, or municipal operations, disposal actions, or treatment processes. ()

v. The determinations made under Subsections 303.07.b. and c. will be made on a pollutant-by-pollutant and outfall-by-outfall basis. ()

vi. These provisions do not alter Department's obligation under Subsection 302.06.a.vii(2) to develop effluent limitations consistent with the assumptions and requirements of any available waste load allocations for the discharge, that is part of a TMDL prepared by the Department and approved by EPA pursuant to 40 CFR 130.7, or prepared by EPA pursuant to 40 CFR 130.7(d). ()

b. Consideration of intake pollutants for technology based effluent limitations: ()

i. Upon request of the discharger, technology-based effluent limitations or standards shall be adjusted to reflect credit for pollutants in the discharger's intake water if: ()

(1) The applicable effluent limitations and standards contained in 40 CFR Part 401 through 471, specifically provide that they shall be applied on a net basis; or ()

(2) The discharger demonstrates that the control system it proposes or uses to meet applicable technology-based limitations and standards would, if properly installed and operated, meet the limitations and

standards in the absence of pollutants in the intake waters. ()

ii. Credit for generic pollutants such as BOD or TSS should not be granted unless the permittee demonstrates that the constituents of the generic measure in the effluent are substantially similar to the constituents of the generic measure in the intake water or unless appropriate additional limits are placed on process water pollutants either at the outfall or elsewhere. ()

iii. Credit shall be granted only to the extent necessary to meet the applicable limitation or standard, up to a maximum value equal to the influent value. Additional monitoring may be necessary to determine eligibility for credits and compliance with permit limits. ()

iv. Credit shall be granted only if the discharger demonstrates that the intake water is drawn from the same body of water into which the discharge is made. The Department may waive this requirement if the Department finds that no environmental degradation will result. ()

v. This section does not apply to the discharge of raw water clarifier sludge generated from the treatment of intake water. ()

c. Consideration of intake pollutants for water quality based effluent limitations: ()

i. The Department will evaluate if there is reasonable potential for the discharge of an identified intake pollutant to cause or contribute to an exceedance of a narrative or numeric water quality criterion. If the Department determines that an intake pollutant in the discharge does not have the reasonable potential to cause or contribute to an exceedance of an applicable water quality standard, the Department is not required to include a water quality-based effluent limit for the identified intake pollutant in the facility's permit. ()

ii. If a reasonable potential exists, then water quality-based effluent limits may be established that reflect a credit for intake pollutants where a discharger demonstrates that the following conditions are met: ()

(1) The facility removes the intake water containing the pollutant from the same body of water into which the discharge is made; ()

(2) The ambient background concentration of the pollutant does not meet the most stringent applicable water quality criterion for that pollutant; ()

(3) The facility does not alter the identified intake pollutant chemically or physically in a manner that would cause adverse water quality impacts to occur that would not occur if the pollutants had not been removed from the body of water; ()

(4) The timing and location of the discharge would not cause adverse water quality impacts to occur that would not occur if the identified intake pollutant had not been removed from the body of water; ()

(5) For the purpose of determining water quality-based effluent limits, the facility does not increase the identified intake pollutant concentration at the point of discharge as compared to the pollutant concentration in the intake water. ()

iii. Where the conditions in Subsection 303.07.c.i. and ii are met, the Department may establish a water quality-based effluent limitation allowing a facility to discharge a mass and concentration of the intake pollutant that are no greater than the mass and concentration found in the facility's intake water. A discharger may add mass of the pollutant to its waste stream if an equal or greater mass is removed prior to discharge, so there is no net addition of the pollutant in the discharge compared to the intake water. ()

iv. Where intake water for a facility is provided by a municipal water supply system and the supplier provides treatment of the raw water that removes an intake water pollutant, the concentration of the intake water pollutant will be determined at the point where the water enters the water supplier's distribution system. ()

v. Where a facility discharges intake pollutants from multiple sources that originate from the

receiving water body and from other water bodies, the Department may derive an effluent limit reflecting the flow-weighted amount of each source of the pollutant provided that conditions in 303.07.c.ii. of this subsection are met and adequate monitoring to determine compliance can be established and is included in the permit. ()

vi. The permit will specify how compliance with mass and concentration-based limitations for the intake water pollutant will be assessed. This may be done by basing the effluent limitation on background concentration data. Alternatively, the Department may determine compliance by monitoring the pollutant concentrations in the intake water and in the effluent. This monitoring may be supplemented by monitoring internal waste streams or by a Department evaluation of the use of best management practices. ()

vii. Effluent limitations must be established to comply with all other applicable state and federal laws and regulations including technology-based requirements and anti-degradation policies. ()

viii. When determining whether water quality based effluent limitations are necessary, information from chemical-specific, whole effluent toxicity and biological assessments will be considered independently. ()

ix. Permit limits must be consistent with the assumptions and requirement of waste load allocations or other provisions in a TMDL that has been approved by the EPA. ()

08. Internal Waste Streams. ()

a. When permit effluent limitations or standards imposed at the point of discharge are impractical or infeasible, effluent limitations or standards for discharges of pollutants may be imposed on internal waste streams before mixing with other waste streams or cooling water streams. In those instances, the monitoring required by Section 304 (Monitoring and Reporting Requirements) shall also be applied to the internal waste streams. ()

b. Limits on internal waste streams will be imposed only when the fact sheet sets forth the exceptional circumstances which make such limitations necessary, such as: ()

i. When the final discharge point is inaccessible (for example, under ten (10) meters of water); ()

ii. The wastes at the point of discharge are so diluted as to make monitoring impracticable; or ()

iii. The interferences among pollutants at the point of discharge would make detection or analysis impracticable. ()

09. Disposal of Pollutants into Wells, into POTWs, or by Land Application. ()

a. When part of a discharger's process wastewater is not being discharged into waters of the United States because it is disposed into a well, into a POTW, or by land application thereby reducing the flow or level of pollutants being discharged into waters of the United States, applicable effluent standards and limitations for the discharge in an IPDES permit shall be adjusted to reflect the reduced raw waste resulting from such disposal. Effluent limitations and standards in the permit shall be calculated by one (1) of the following methods: ()

i. If none of the waste from a particular process is discharged into waters of the United States, and effluent limitations guidelines provide separate allocation for wastes from that process, all allocations for the process shall be eliminated from calculation of permit effluent limitations or standards; or ()

ii. In all cases other than those described in Subsection 303.09.a.i., effluent limitations shall be adjusted by multiplying the effluent limitation derived by applying effluent limitation guidelines to the total waste stream by the amount of wastewater flow to be treated and discharged into waters of the United States, and dividing the result by the total wastewater flow. Effluent limitations and standards so calculated may be further adjusted under 40 CFR Part 125, subpart D, to make them more or less stringent if discharges to wells, POTWs, or by land application change the character or treatability of the pollutants being discharged to receiving waters. This method may be algebraically expressed as:

$P=(E \times N)/T$; where P is the permit effluent limitation, E is the limitation derived by applying effluent guidelines to the total waste stream, N is the wastewater flow to be treated and discharged to waters of the United States, and T is the total wastewater flow.

- ()
- b. Subsection 303.09.a. does not apply to the extent that promulgated effluent limitations guidelines: ()
 - i. Control concentrations of pollutants discharged but not mass; or ()
 - ii. Specify a different specific technique for adjusting effluent limitations to account for well injection, land application, or disposal into POTWs. ()
 - c. Subsection 303.09.a. does not alter a discharger's obligation to meet any more stringent requirements established under Sections 300 (Conditions Applicable to all Permits), 301 (Permit Conditions for Specific Categories), 40 CFR 122.42(e), and 302 (Establishing Permit Provisions). ()
 - d. Disposal of discharge into injection wells is regulated by: ()
 - i. Idaho Department of Water Resources, in compliance with the IDAPA 37.03.03, "Rules and Minimum Standards for the Construction and Use of Injection Wells," for a Class I injection well; or ()
 - ii. Health District having jurisdiction, in compliance with IDAPA 58.01.03, "Individual/Subsurface Sewage Disposal Rules," for a Class V injection well. ()
 - e. Disposal of discharge onto the surface of the land is regulated by the Department under IDAPA 58.01.17, "Recycled Water Rules." ()

304. MONITORING AND REPORTING REQUIREMENTS.

- 01. Monitoring Requirements.** A permit must include the following requirements for monitoring: ()
- a. Requirements concerning the proper use, maintenance, and installation, when appropriate, of monitoring equipment or methods (including biological monitoring methods when appropriate); ()
 - b. The type, intervals, and frequency of monitoring sufficient to yield data which are representative of the monitored activity including, when appropriate, continuous monitoring; ()
 - c. Provisions for reporting the results of monitoring, including frequency, appropriate for the regulated activity based on the impact of that activity and as specified in 40 CFR Part 127 (NPDES Electronic Reporting). Reporting shall be no less frequent than specified in 40 CFR 122.44; ()
 - d. The mass (or other measurement specified in the permit) for each pollutant limited in the permit; ()
 - e. The volume of effluent discharged from each outfall; ()
 - f. Other measurements as appropriate, including: ()
 - i. Pollutants in internal waste streams under Subsection 303.08; ()
 - ii. Pollutants in intake water for net limitations under Subsection 303.07; ()
 - iii. Frequency, rate of discharge, etc., for non-continuous discharges under Subsection 303.05; ()

- iv. Pollutants subject to notification requirements under Subsection 301.01; and ()
- v. Pollutants in sewage sludge or other monitoring as specified in 40 CFR Part 503; or as determined to be necessary on a case-by-case basis pursuant to the Clean Water Act section 405(d)(4), Section 380 (Sewage Sludge) of these rules, and IDAPA 58.01.16.650, “Wastewater Rules”; ()

g. According to sufficiently sensitive test procedures (i.e., methods) approved under 40 CFR Part 136 for the analysis of pollutants or pollutant parameters, or another method required under 40 CFR Part 401 through 471 or Part 501 through 503. Consistent with 40 CFR Part 136, applicants or permittees have the option of providing matrix or sample specific minimum levels rather than the published levels. Further, where an applicant or permittee can demonstrate that, despite a good faith effort to use a method that would otherwise meet the definition of “sufficiently sensitive,” the analytical results are not consistent with the QA/QC specifications for that method, then the Department may determine that the method is not performing adequately and the Department should select a different method from the remaining EPA-approved methods that is sufficiently sensitive consistent with provisions outlined in Subsections 304.01.g.i. and ii. For the purposes of this section, a method is “sufficiently sensitive” when: ()

i. The method minimum level (ML) is at or below the level of the effluent limit established in the permit for the measured pollutant or pollutant parameter; or ()

ii. The method has the lowest ML of the analytical methods approved under 40 CFR Part 136 or required under 40 CFR Chapter I, Subchapter N or O, for the measured pollutant or pollutant parameter; and ()

h. In the case of pollutants or pollutant parameters for which there are no approved methods under 40 CFR Part 136, or methods are not otherwise required under 40 CFR Part 401 through 471 or Part 501 through 503, monitoring shall be conducted according to a test procedure specified in the permit for such pollutants or pollutant parameters. ()

02. Reporting Monitoring Results. ()

a. Except as provided in Subsections 304.02.d. and 304.02.e., the Department will establish requirements to report monitoring results on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. All results must be electronically reported in compliance with 40 CFR Part 127. ()

b. For sewage sludge use or disposal practices, the Department will establish requirements to monitor and report results on a case-by-case basis with a frequency dependent on the nature and effect of the sewage sludge use or disposal practice; minimally this shall be as specified in 40 CFR Part 503, Section 380 (Sewage Sludge) of these rules, and Idaho’s Wastewater Rules, IDAPA 58.01.16.650, “Wastewater Rules,” (where applicable), but in no case less than once a year. All results must be electronically reported in compliance with 40 CFR Part 127. ()

c. The Department will establish requirements to report monitoring results for storm water discharges associated with industrial activity which are subject to an effluent limitation guideline on a case-by-case basis with a frequency dependent on the nature and effect of the discharge, but in no case less than once a year. ()

d. The Department will establish requirements to report monitoring results for storm water discharges associated with industrial activity, other than those addressed in Subsection 304.02.c., on a case-by-case basis with a frequency dependent on the nature and effect of the discharge. At a minimum, a permit for such a discharge must require the discharger to: ()

i. Conduct an annual inspection of the facility site to identify areas contributing to a storm water discharge associated with industrial activity; ()

ii. Evaluate whether measures to reduce pollutant loadings identified in a storm water pollution prevention plan are adequate and properly implemented in accordance with the terms of the permit or whether additional control measures are needed; ()

iii. Maintain for a period of three (3) years a record summarizing the results of the inspection and a certification that the facility is in compliance with the plan and the permit, and identifying any incidents of noncompliance; ()

iv. Sign the report and certification in accordance with Section 090 (Signature Requirements); and ()

v. Permits for storm water discharges associated with industrial activity from inactive mining operations may, where annual inspections are impracticable, require certification that the facility is in compliance with the permit, or alternative requirements, once every three (3) years by an Idaho licensed professional engineer. ()

e. A permit that does not require monitoring results reports at least annually must require the permittee to report, at least annually, all instances of noncompliance not reported under Subsection 300.12. ()

305. COMPLIANCE SCHEDULES.

01. General. An IPDES permit may, when appropriate, specify a schedule of compliance leading to compliance with the Clean Water Act and these rules. ()

a. Any schedules of compliance under this section shall require compliance as soon as possible. ()

b. The first IPDES permit issued to a new source or a new discharger shall contain a schedule of compliance only when necessary to allow a reasonable opportunity to attain compliance with requirements issued or revised after commencement of construction, but less than three (3) years before commencement of the relevant discharge. ()

c. For recommending dischargers, a schedule of compliance shall be available only when necessary to allow a reasonable opportunity to attain compliance with requirements issued or revised less than three (3) years before recommencement of discharge. ()

d. If a permit establishes a schedule of compliance under this section that exceeds one (1) year from the date of permit issuance, the schedule must set out interim requirements and dates for achievement of the interim requirements. If the schedule includes interim requirements: ()

i. The time between interim dates shall not exceed one (1) year, except that in the case of a schedule for compliance with standards for sewage sludge use and disposal, the time between interim dates shall not exceed six (6) months; or ()

ii. If the time necessary for completion of any interim requirement (such as the construction of a control facility) is more than one (1) year and is not readily divisible into stages for completion, the permit shall specify interim dates for the submission of reports of progress toward completion of the interim requirements and indicate a projected completion date. ()

e. Within fourteen (14) days following each interim and final date of compliance, the permittee shall notify the Department in writing of its compliance or noncompliance with the interim or final requirements, or submit progress reports if Subsection 305.01.d.ii. is applicable. ()

f. Permits may incorporate compliance schedules which allow a discharger to phase in, over time, compliance with water quality-based effluent limitations in accordance with IDAPA 58.01.02.400, "Water Quality Standards." ()

02. Alternative Schedules of Compliance. An IPDES permit applicant or permittee may cease conducting regulated activities (by terminating direct discharge for point sources) rather than continuing to operate and meet permit requirements as follows: ()

a. If the permittee decides to cease conducting regulated activities at a given time within the term of a permit which has already been issued: ()

i. The permit may be modified to contain a new or additional schedule leading to timely cessation of activities; or ()

ii. The permittee shall cease conducting permitted activities before noncompliance with any interim or final compliance schedule requirement already specified in the permit. ()

b. If the decision to cease conducting regulated activities is made before issuance of a permit whose term will include the termination date, the permit shall contain a schedule leading to termination which will ensure timely compliance with applicable requirements no later than the statutory deadline. ()

c. If the permittee is undecided whether to cease conducting regulated activities, the Department may issue or modify a permit to contain two (2) schedules, as follows: ()

i. Both schedules shall contain an identical interim deadline requiring a final decision on whether to cease conducting regulated activities no later than a date which ensures sufficient time to comply with applicable requirements in a timely manner if the decision is to continue conducting regulated activities; ()

ii. One (1) schedule shall lead to timely compliance with applicable requirements, no later than the statutory deadline; ()

iii. The second schedule shall lead to cessation of regulated activities by a date which will ensure timely compliance with applicable requirements no later than the statutory deadline; and ()

iv. Each permit containing two (2) schedules shall include a requirement that after the permittee has made a final decision under Subsection 305.02.c., it shall follow the schedule leading to compliance if the decision is to continue conducting regulated activities, and follow the schedule leading to termination if the decision is to cease conducting regulated activities. ()

d. The applicant's or permittee's decision to cease conducting regulated activities shall be evidenced by a firm public commitment satisfactory to the Department, such as a resolution of the board of directors of a corporation. ()

306. -- 309. (RESERVED)

310. VARIANCES.

01. Variance Requests by non-POTWs. ()

a. A discharger which is not a POTW may request a variance from otherwise applicable effluent limitations under the following statutory or regulatory provisions, within the times specified in this subsection. ()

i. A request for a variance based on the presence of fundamentally different factors from those on which the effluent limitations guideline was based must be filed as follows: ()

(1) For a request from best practicable control technology currently available (BPT), by the close of the public comment period under Section 109 (Public Notification and Comment); or ()

(2) For a request from best available technology economically achievable (BAT) and/or best conventional pollutant control technology (BCT), by no later than one hundred eighty (180) days after the date on which an effluent limitation guideline is published in the Federal Register for a request based on an effluent limitation guideline promulgated on or after February 4, 1987. ()

ii. The request must explain how the requirements of the applicable regulatory and/or statutory criteria

have been met. ()

b. An applicant may request a variance for non-conventional pollutants under this section for the following: ()

i. A variance from the BAT requirements for Clean Water Act section 301(b)(2)(F) pollutants (commonly called non-conventional pollutants) pursuant to the Clean Water Act section 301(c) because of the economic capability of the owner or operator; or ()

ii. A variance pursuant to the Clean Water Act section 301(g) provided: ()

(1) The variance may only be requested for ammonia; chlorine; color; iron; total phenols (4AAP), when determined by the EPA Administrator to be a pollutant covered by the Clean Water Act section 301(b)(2)(F); and ()

(2) Any other pollutant which the EPA Administrator lists under the Clean Water Act section 301(g)(4). ()

c. The request for variance as outlined in Subsection 310.01.b. must be made as follows: ()

i. For those requests for a variance from an effluent limitation based upon an effluent limitation guideline, by submitting an initial request to the Department no later than two hundred seventy (270) days after promulgation of the applicable effluent limitation guideline followed by a completed request no later than the close of the public comment period under Section 109 (Public Notification and Comment). ()

(1) The initial request to the Department must contain: ()

(a) The name of the discharger; ()

(b) The permit number; ()

(c) The outfall number(s); ()

(d) The applicable effluent guideline; and ()

(e) Whether the discharger is requesting a Clean Water Act section 301(c) or section 301(g) modification or both. ()

(2) The completed request must demonstrate that the applicable requirements of 40 CFR Part 125 have been met. Notwithstanding this provision, the complete application for a request under Clean Water Act section 301(g) must be filed one hundred eighty (180) days before the Department must make a decision (unless the Department establishes a shorter or longer period). ()

ii. For those requests for a variance from effluent limitations not based on effluent limitation guidelines, the request need only comply with Subsection 310.01.c.i(2) and need not be preceded by an initial request under Subsection 310.01.c.i(1). ()

d. A modification under the Clean Water Act section 302(b)(2) of requirements under the Clean Water Act section 302(a) for achieving water quality related effluent limitations may be requested no later than the close of the public comment period under Section 109 (Public Notification and Comment) on the permit from which the modification is sought. ()

e. A variance under the Clean Water Act section 316(a) for the thermal component of any discharge must be filed with a timely application for a permit under Section 105 (Application for an Individual IPDES Permit), except that if thermal effluent limitations are established under the Clean Water Act section 402(a)(1) or are based on water quality standards, the request for a variance may be filed by the close of the public comment period under Section 109 (Public Notification and Comment). ()

02. Variance Requests by POTWs. A discharger which is a POTW may request a variance from water quality based effluent limitations. A modification under the Clean Water Act section 302(b)(2) of the requirements under the Clean Water Act section 302(a) for achieving water quality based effluent limitations shall be requested no later than the close of the public comment period under Section 109 (Public Notification and Comment) on the permit from which the modification is sought. ()

03. Permit Variance Decision Process. ()

a. The Department may deny requests for variances. A variance that has been denied by the Department may be appealed according to the process identified in Section 204 (Appeals Process). ()

b. The Department may grant (subject to EPA objection under Subsection 103.02 or 40 CFR 123.44): ()

i. Variances for extensions under the Clean Water Act section 301(i) based on delay in completion of a POTW; ()

ii. Variances after consultation with EPA, extensions under the Clean Water Act section 301(k) based on the use of innovative technology; ()

iii. Variances under the Clean Water Act section 316(a) for thermal pollution; or ()

iv. Variances from water quality standards under IDAPA 58.01.02.260, "Water Quality Rules." ()

c. The Department may forward to EPA with or without a recommendation: ()

i. A variance based on the economic capability of the applicant under the Clean Water Act section 301(c); or ()

ii. A variance based on water quality related effluent limitations under the Clean Water Act section 302(b)(2). ()

d. The Department may forward to EPA with a written concurrence: ()

i. A variance based on the presence of fundamentally different factors from those on which an effluent limitations guideline was based (Clean Water Act section 301(n)); or ()

ii. A variance based upon certain water quality factors under the Clean Water Act section 301(g). ()

e. The EPA may grant or deny a request for a variance that is forwarded by the Department. If the EPA Administrator (or his delegate) approves the variance, the Department shall prepare a draft permit incorporating the variance. ()

f. Any public notice of a draft permit for which a variance or modification has been approved or denied shall identify the applicable procedures for appealing that decision under Section 204 (Appeals Process). ()

04. Expedited Variance Procedures and Time Extensions. ()

a. Notwithstanding the time requirements in Subsections 310.01 and 310.02, the Department may notify a permit applicant before a draft permit is issued under Section 108 (Draft Permit and Fact Sheet) that the draft permit will likely contain limitations which are eligible for variances. ()

i. In the notice, the Department may require the applicant, as a condition of consideration of any

potential variance request, to submit a request explaining how the requirements of 40 CFR Part 125, applicable to the variance, have been met and may require its submission within a specified reasonable time after receipt of the notice. ()

ii. The Department may send the notice before the permit application has been submitted. The draft or final permit may contain the alternative limitations which may become effective upon final grant of the variance. ()

b. A discharger who cannot file a timely complete request required under Subsections 310.01.c.i.(2) or 310.01.c.ii. may request an extension. ()

i. The extension may be granted or denied at the discretion of the Department. ()

ii. The extension shall be no more than six (6) months in duration. ()

05. Special Procedures for Decisions on Thermal Variances. ()

a. The only issues connected with issuance of a particular permit on which the Department will make a final decision before the final permit is issued, are whether alternative effluent limitations would be justified under the Clean Water Act section 316(a) or whether cooling water intake structures will use the best available technology under section 316(b). ()

i. Permit applicants who wish an early decision on these issues should make a request to the Department, furnished with supporting reasons at the time their permit applications are filed. ()

ii. The Department will then decide whether or not to make an early decision. If it is granted, both the early decision on Clean Water Act section 316 (a) or (b) issues and the grant of the balance of the permit shall be: ()

(1) Considered permit issuance under these regulations, and ()

(2) Subject to the same requirements of public notice and comment and the same opportunity for an appeal. ()

b. If the Department, on review of the administrative record, determines that the information necessary to decide whether or not the Clean Water Act section 316(a) issue is not likely to be available in time for a decision on permit issuance, the Department may issue a permit for a term up to five (5) years. ()

i. The permit shall require achievement of the effluent limitations initially proposed for the thermal component of the discharge, no later than the date otherwise required by law. ()

ii. However, the permit shall also afford the permittee an opportunity to file a demonstration under Clean Water Act section 316(a), after conducting such studies as are required under 40 CFR 125.70 through 125.73. ()

iii. A new discharger may not exceed the thermal effluent limitation which is initially proposed unless and until its Clean Water Act section 316(a) variance request is finally approved. ()

c. Any proceeding held under Subsection 310.05.a. shall be: ()

i. Publicly noticed as required by Section 109 (Public Notification and Comment), and ()

ii. Conducted at a time allowing the permittee to take necessary measures to meet the final compliance date in the event its request for modification of thermal limits is denied. ()

d. Whenever the Department defers the decision under the Clean Water Act section 316(a), any decision under the Clean Water Act section 316(b) may be deferred. ()

311. -- 369. (RESERVED)

370. PRETREATMENT STANDARDS.

- 01. Purpose and Applicability.** This section and 40 CFR Part 403 apply to: ()
- a.** Pollutants from non-domestic sources covered by Pretreatment Standards which are indirectly discharged into or transported by truck or rail or otherwise introduced into POTWs as defined in Subsection 370.04 and 40 CFR 403.3; ()
 - b.** POTWs which receive wastewater from sources subject to National Pretreatment Standards; and ()
 - c.** Any new or existing source subject to Pretreatment Standards. National Pretreatment Standards do not apply to sources which discharge to a sewer which is not connected to a POTW Treatment Plant. ()
- 02. Objectives of General Pretreatment Regulations.** This section and 40 CFR Part 403 fulfill three (3) objectives: ()
- a.** To prevent the introduction of pollutants into POTWs which will interfere with the operation of a POTW, including interference with its use or disposal of municipal sludge; ()
 - b.** To prevent the introduction of pollutants into POTWs which will pass through the treatment works or otherwise be incompatible with such works; and ()
 - c.** To improve opportunities to recycle and reclaim municipal and industrial wastewaters and sludges. ()
- 03. Department Program in Lieu of a POTW Program.** 40 CFR 403.8(a) requires certain POTWs develop a pretreatment program. The Department may, however, assume responsibility for implementing the POTW pretreatment program requirements set forth in 40 CFR 403.8(f) in lieu of requiring the POTW to develop a pretreatment program. This does not preclude POTWs from independently developing pretreatment programs. ()
- 04. Term Interpretation.** When used in the context of 40 CFR Part 403, unless the context in which a term is used clearly requires a different meaning, terms 40 CFR Part 403 that are incorporated by reference in these rules have the following meanings: ()
- a.** The terms Administrator or Regional Administrator mean the EPA Region 10 Administrator; ()
 - b.** The term Approval Authority means the Department of Environmental Quality; ()
 - c.** The term Approved POTW Pretreatment Program or Program or POTW Pretreatment Program means a program administered by a POTW that meets the criteria established in 40 CFR 403.8 and 403.9, and which has been approved by the Department in accordance with 40 CFR 403.1; ()
 - d.** The term Control Authority means the POTW for a facility with a Department-approved pretreatment program and the Department for a POTW without a Department-approved pretreatment program; ()
 - e.** The term Director means the Department of Environmental Quality with an NPDES permit program approved pursuant to the Clean Water Act section 402(b); ()
 - f.** The terms National Pretreatment Standard, Pretreatment Standard, or Standard mean any regulation containing pollutant discharge limits promulgated by the EPA in accordance with section 307 (b) and (c) of the Act, ()

which applies to Industrial Users. This term includes prohibitive discharge limits established pursuant to 40 CFR 403.5; and ()

g. The term Water Management Division Director means a Director of the Water Management Division within the Region 10 office of the Environmental Protection Agency or this person's delegated representative. ()

05. Exceptions to Incorporation by Reference. The following sections of 40 CFR Part 403 are excluded from the incorporation by reference in Section 003 (Incorporation by Reference) of these rules. ()

a. 40 CFR 403.4 (State or Local Law). ()

b. 40 CFR 403.19 (Provisions of Specific Applicability to the Owatonna Wastewater Treatment Facility). ()

c. 40 CFR 403.20 (Pretreatment Program Reinvention Pilot Projects Under Project XL). ()

371. -- 379. (RESERVED)

380. SEWAGE SLUDGE.

01. Purpose. The purpose of this section and 40 CFR Part 503 is to: ()

a. Establish standards, which consist of general requirements, pollutant limits, management practices, and operational standards, for the final use or disposal of sewage sludge. ()

i. Include standards for sewage sludge applied to the land, placed on a surface disposal site, or fired in a sewage sludge incinerator. ()

ii. Include: ()

(1) Pathogen and alternative vector attraction reduction requirements for sewage sludge applied to the land or placed on a surface disposal site; and ()

(2) On a case-by-case basis, controls for storm water runoff from lands where sewage sludge or septage has been placed for treatment or disposal. ()

b. Include the frequency of monitoring and recordkeeping requirements when sewage sludge is: ()

i. Applied to the land; ()

ii. Placed on a surface disposal site; or ()

iii. Fired in a sewage sludge incinerator; and ()

c. Include reporting requirements for: ()

i. Class I sludge management facilities; ()

ii. POTWs with a design flow rate equal to or greater than one million gallons per day (1 MGD); and ()

iii. POTWs that serve ten thousand (10,000) people or more. ()

02. Applicability. This section and 40 CFR Part 503 applies to: ()

- a. Any person, who prepares sewage sludge, applies sewage sludge to the land, or fires sewage sludge in a sewage sludge incinerator and to the owner or operator of a surface disposal site; ()
- b. Sewage sludge applied to the land, placed on a surface disposal site, or fired in a sewage sludge incinerator; ()
- c. The exit gas from a sewage sludge incinerator stack; or ()
- d. Land where sewage sludge is applied, to a surface disposal site, and to a sewage sludge incinerator. ()

03. Term Interpretation. When used in the context of 40 CFR Part 503, unless the context in which a term is used clearly requires a different meaning, terms in the 40 CFR Part 503 that are incorporated by reference in these rules have the following meanings: ()

- a. The terms Administrator or Regional Administrator mean the EPA Region 10 Administrator; ()
- b. The terms Director or State Program Director mean the Department of Environmental Quality as the agency designated by the Governor as having the lead responsibility for managing or coordinating the approved IPDES program; and ()
- c. The term permitting authority is the Department of Environmental Quality. ()

04. Exceptions to Incorporation by Reference. 40 CFR 503.1 (Purpose and Applicability) is excluded from the incorporation by reference found in Section 003 (Incorporation by Reference) of these rules. ()

381. -- 399. (RESERVED)

400. COMPLIANCE EVALUATION.

01. Non-Compliance Actions. When the permittee is not in compliance with any condition of the existing or expired permit that has been administratively continued, the Department may choose to do one (1) or more of the following: ()

- a. Initiate an enforcement action; ()
- b. Issue a notice of intent to deny the new application. If the application is denied and the expired permit is no longer effective as provided in Subsection 101.02, the owner or operator must cease the activities authorized by the permit or be subject to enforcement action for operating without a permit; ()
- c. Issue a new permit with appropriate conditions; or ()
- d. Take other actions authorized by state law. ()

401. -- 499. (RESERVED)

500. ENFORCEMENT.

01. General Enforcement and Penalties. Any person who violates any permit condition, filing or reporting requirement, duty to allow or carry out inspections, entry or monitoring requirements or any other provision in these rules shall be subject to administrative, civil or criminal enforcement and those remedies authorized in the Environmental Protection and Health Act, Sections 39-101 et seq., Idaho Code, including without limitation, civil and criminal penalties as provided in Sections 39-108 and 39-117, Idaho Code. ()

02. Truth in Reporting. It is a violation of these rules for any person to falsify, tamper with, or

knowingly render inaccurate any monitoring device or method required to be maintained under an IPDES permit. In addition to any other remedy available to the Department, such a violation is punishable by a fine as provided in Section 39-117, Idaho Code. ()

03. False Statements. It is a violation of these rules for any person to knowingly make any false statement, representation, or certification in any record or other document submitted or required to be maintained under an IPDES permit, including monitoring reports or reports of compliance or non-compliance. In addition to any other remedy available to the Department, such a violation is punishable by a fine as provided in Section 39-117, Idaho Code. ()

04. Public Participation in Enforcement. The Department shall provide for public participation in the state enforcement process by: ()

a. Investigating and providing written responses to citizen complaints; ()

b. Not opposing intervention by any citizen when permissive intervention may be authorized by statute, rule, or regulation; and ()

c. Publishing notice of and providing at least thirty (30) days for public comment on any proposed settlement of a state enforcement action. ()

501. -- 599. (RESERVED)

600. ADMINISTRATIVE RECORDS AND DATA MANAGEMENT.

01. Administrative Record for Draft Permits. ()

a. The provisions of a draft permit prepared by the Department under Subsection 108.01 shall be based on the administrative record defined in this section. ()

b. For preparing a draft permit, the record shall consist of: ()

i. The application, if required, and any supporting data furnished by the applicant; ()

ii. The draft permit or notice of intent to deny the application or to terminate the permit; ()

iii. The fact sheet; ()

iv. All documents cited in the fact sheet; and ()

v. Other documents contained in the supporting file for the draft permit. ()

c. Material readily available at the Department or published material that is generally available, and that is included in the administrative record under Subsection 600.01, need not be physically included with the rest of the record as long as it is specifically referred to in the fact sheet. ()

d. This subsection applies to all draft permits when public notice was given after the effective date of these rules. ()

02. Administrative Record for Final Permits. ()

a. The Department shall base final permit decisions on the administrative record defined in this section. ()

b. The administrative record for any final permit, including issuance, denial, transfer, modification, revocation and reissuance, or termination shall consist of the administrative record for the draft permit and fact sheet, as defined in Subsection 600.01, the proposed permit and associated information, and the following: ()

- i. All comments received during the public comment period provided under Section 109 (Public Notification and Comment); ()
 - ii. The record of, and any written materials submitted as part of, any meeting(s) held under Section 109 (Public Notification and Comment); ()
 - iii. The application or notice of intent to obtain coverage under a general permit, notice of intent to deny the application, or to terminate the permit, and any supporting data furnished by the applicant; ()
 - iv. The response to comments required by Subsections 109.02 and 109.03 and any new material placed in the record under that section; and ()
 - v. Any other relevant correspondence and documents. ()
 - c. The final permit and fact sheet shall become part of the administrative record after the final permit is issued. ()
 - d. The additional documents identified under Subsection 600.02.b., 107.03, and 109.02 should be added to the record as soon as possible after their receipt or publication by the Department. The record shall be complete on the date the final permit is issued. ()
 - e. This subsection applies to all IPDES permits when the draft permit was included in a public notice. ()
 - f. Material readily available from the Department or published materials which are generally available and which are included in the administrative record under Subsection 600.02 or Section 109 (Public Notification and Comment), need not be physically included in the same file as the rest of the record as long as it is specifically referred to in the fact sheet or in the response to comments. ()
- 03. Electronic Submittals.** Any information which the Department requires to be submitted electronically, with an electronic signature approved by the Department, will become part of the Administrative Record in accordance with Subsections 600.01 and 02. ()

601. -- 999. (RESERVED)

IDAPA 60 – IDAHO STATE SOIL AND WATER CONSERVATION COMMISSION

DOCKET NO. 60-0501-2000F (FEE RULE)

NOTICE OF OMNIBUS RULEMAKING – PROPOSED RULE

AUTHORITY: In compliance with Sections 67-5221(1), Idaho Code, notice is hereby given that this agency has initiated proposed rulemaking procedures. The action is authorized pursuant to Sections 22-2718, 22-2727, and 22-2730, Idaho Code.

PUBLIC HEARING SCHEDULE: A public hearing concerning this rulemaking will be held as follows:

PUBLIC HEARING
Monday, September 21, 2020 - 10:00 a.m. (MDT)
Idaho Water Center 322 E. Front St., Suite 560, Conference Room Boise, ID 83702
TELECONFERENCE CALL-IN
Toll Free: 1-877-820-7831 Participant Code: 922837

In order to ensure compliance with social distancing requirements at the meeting, we ask that any person planning on attending the meeting in person provide forty-eight (48) hour notice to Crystal Rosen at (208) 332-1790. Pursuant to the city of Boise's Public Health Emergency Order 20-10, persons attending the meeting in person are required to wear face covering that completely cover their nose and mouth.

The hearing site will be accessible to persons with disabilities. Requests for accommodation must be made not later than five (5) days prior to the hearing, to the agency address below.

DESCRIPTIVE SUMMARY: The following is the required finding and concise statement of the purpose of the proposed rulemaking:

This proposed rulemaking re-publishes the following existing temporary rule chapter previously submitted to and reviewed by the Idaho Legislature under IDAPA 60, rules of the Idaho State Soil and Water Conservation Commission:

IDAPA 60

- 60.05.01, *Rules of the Idaho State Soil and Water Conservation Commission.*

FEE SUMMARY: This rulemaking does not impose a fee or charge, or increase a fee or charge, beyond what was previously submitted to and reviewed by the Idaho Legislature in the prior rules. Rule 60.05.01.102.05 states, “[t]he applicant is required to cover all costs incurred for loan closure, title insurance, and recording fees.”

FISCAL IMPACT: The following is a specific description, if applicable, of any negative fiscal impact on the state general fund greater than ten thousand dollars (\$10,000) during the fiscal year: This rulemaking is not anticipated to have any fiscal impact on the state general fund because the FY2021 budget has already been set by the Legislature, and approved by the Governor, anticipating the existence of the rules and fees being reauthorized by this rulemaking.

NEGOTIATED RULEMAKING: Pursuant to Section 67-5220(2), Idaho Code, negotiated rulemaking was not feasible because engaging in negotiated rulemaking for all previously existing rules will inhibit the agency from carrying out its ability to serve the citizens of Idaho and to protect their health, safety, and welfare.

INCORPORATION BY REFERENCE: Pursuant to Section 67-5229(2)(a), Idaho Code, incorporated material may be obtained or electronically accessed as provided in the text of the proposed rules attached hereto.

ASSISTANCE ON TECHNICAL QUESTIONS, SUBMISSION OF WRITTEN COMMENTS: For assistance on technical questions concerning the proposed rule, contact Crystal Rosen, at (208) 332-1790.

Anyone may submit written comments regarding the proposed rulemaking. All written comments must be directed to the undersigned and must be delivered within twenty-one (21) days after publication of this Notice in the Idaho Administrative Bulletin. Oral presentation of comments may be requested pursuant to Section 67-5222(2), Idaho Code, and must be delivered to the undersigned within fourteen (14) days of the date of publication of this Notice in the Idaho Administrative Bulletin.

Dated this 19th day of August, 2020.

Teri Murrison, Administrator
Idaho Soil & Water Conservation Commission
322 E. Front St., Suite 560
P.O. Box 83720

IDAPA 60 – IDAHO STATE SOIL AND WATER CONSERVATION COMMISSION

60.05.01 – RULES OF THE IDAHO STATE SOIL AND WATER CONSERVATION COMMISSION

000. LEGAL AUTHORITY.

This chapter is adopted by the Idaho State Soil and Water Conservation Commission, under the legal authority of Sections 22-2718, 22-2727, and 22-2730, Idaho Code. ()

001. TITLE AND SCOPE.

01. Title. The title of this chapter is IDAPA 60.05.01, “Rules of the Idaho State Soil and Water Conservation Commission.” ()

02. Scope. The provisions of these rules set forth procedures and requirements for establishing, implementing, and administering a state loan from the RCRDP fund as provided in Sections 22-2730, through 22-2732, Idaho Code, and provide for the allocation of state funds appropriated for distribution to conservation districts pursuant to Section 22-2727, Idaho Code. ()

002. -- 009. (RESERVED)

010. DEFINITIONS.

For the purpose of these rules, unless the context indicates otherwise, the terms and phrases are used as defined herein: ()

01. Applicant. An eligible applicant as defined in Section 22-2717, Idaho Code. ()

02. Application. The loan request document that sets forth the information required by Section 22-2732, Idaho Code and Subsection 057.03 of these rules, including a conservation plan. ()

03. Base Funding. Funds appropriated to the Commission to be allocated equally to the various soil conservation districts in a sum not to exceed eight thousand five hundred dollars (\$8,500) per district per year. ()

04. Board of Supervisors. Governing body of a district as provided in Section 22-2717(25), Idaho Code. ()

05. Certify. To confirm formally as true, accurate, or genuine. ()

06. Commission. The Idaho State Soil and Water Conservation Commission as defined in Section 22-2718, Idaho Code. ()

07. Conservation District or District. A soil (and water) conservation district as defined in Section 22-2717, Idaho Code. ()

08. Conservation Plan. A conservation plan as defined in Sections 22-2717 and 22-2732, Idaho Code that sets forth the information required by Subchapter A. of these rules. ()

09. Contractee. The applicant when the loan has been closed and recorded. ()

10. Coordinated Resource Planning Process. A process that considers all the resources and resource users within a geographical area and encourages active involvement and input from all interested parties. ()

11. District. A Conservation District, Soil Conservation District, or Soil and Water Conservation District as defined in Section 22-2717, Idaho Code. ()

12. Eligible Land. Private, state, county, or federal lands within the state of Idaho. ()

13. Field Office. The local United States Department of Agriculture Natural Resources Conservation Service (NRCS) office usually located with the principal headquarters of the local District. ()

14. Field Office Technical Guide. The primary scientific reference for NRCS that contains technical

information about the conservation of soil, water, air, and related plant and animal resources. Technical guides used in each field office are localized so that they apply specifically to the geographic area for which they are prepared. Copies of the field office technical guides may be obtained from a local District or field office. ()

15. **Financial and Match Report.** Documentation certified by the Board of Supervisors that: ()
 - a. Itemizes local funds and services received by a district during the previous fiscal year; and ()
 - b. Describes how state base and match funds were utilized during the previous fiscal year. ()
16. **Fiscal Year.** As set forth in Section 67-2201, Idaho Code, the fiscal year will begin on July 1 and close on June 30 of the following year. ()
17. **Five (5) Year Plan.** The plan reviewed and updated annually by each district pursuant to the Final Agreement to implement an Antidegradation Policy for the State of Idaho (August 18, 1988). The plan will contain the following components, as further specified by Commission policy: physical characteristics, economic condition and outlook, assessment of the District's resource conditions and conservation needs, prioritized objectives, water quality component, and an annual work plan. ()
18. **Fund.** The RCRDP fund established pursuant to Section 22-2730, Idaho Code. ()
19. **Funding Criteria.** Criteria considered by the Commission to determine the amount of base and match funding to be allocated to the conservation districts. Criteria may include district budgets, district budget requests, district programs and work plans, and district work load analysis. The following documents may be required on an annual basis in order to consistently apply the criteria to all districts: ()
 - a. Five (5) year plans; ()
 - b. Financial and match reports; and ()
 - c. Performance reports. ()
20. **Local Funds.** Monies received in the previous fiscal year from local units of government and organizations for the general purposes of a conservation district. Funds received for special projects, used as required match for specific grants or projects, or on a fee-for-service basis will not be used to calculate match funding. ()
21. **Local Services.** Non-cash contributions received in the previous fiscal year from local units of government and organizations for the general purposes of a conservation district. Services received for special projects, used as required match for specific grants or projects, or on a fee-for-service basis will not be used to calculate match funding. ()
22. **Local Units of Government.** Any general or special purpose political subdivision of the state which has the power to levy taxes and/or appropriate and spend funds. ()
23. **Match Funding.** Funds appropriated to the Commission for distribution to conservation districts in excess of base funding not to exceed twice the amount of local funds and services received by each district in the previous fiscal year. ()
24. **Maximum Allocation.** The total of base funding and match funding allocated to any one (1) conservation district shall not exceed fifty-eight thousand and five hundred dollars (\$58,500) in a fiscal year. ()
25. **Organizations.** A group of two (2) or more persons structured and managed to pursue a collective goal on a continuing basis. ()
26. **Other Funds.** Funds to be dedicated to conservation practice implementation costs which are not from the RCRDP fund or provided by the applicant. ()

27. Performance Report. Documentation summarizing conservation activities, projects, and programs implemented by a conservation district during the previous fiscal year. ()

28. Practice or Eligible Practice for Loans. A practice listed in the field office technical guide or a special practice approved under Section 058 of these rules. ()

29. Practice Life. The number of years, with proper maintenance and operation, that a practice is expected to last, as shown in the field office technical guide. ()

30. Program Year. The state fiscal year as provided in Section 67-2201, Idaho Code. ()

31. Project. One (1) or more practices to be installed with a RCRDP loan. ()

32. Rangeland. Land used primarily for the grazing of domestic livestock and wildlife. ()

33. Riparian Areas. Riparian areas are sites directly influenced by free water. They have visible vegetation or physical characteristics that reflect free water influence. Lake shores and stream banks are typical riparian areas. Excluded are sites such as ephemeral streams or washes that do not exhibit the presence of vegetation dependent upon free water in the soil. ()

34. Security. Collateral provided by an approved applicant to secure requested RCRDP funds. ()

35. Special Practice. A practice (not listed in the field office technical guide) that includes a proven, modern technique that is necessary to solve a resource problem and meet program objectives. ()

011. ABBREVIATIONS.

01. RCRDP. The Idaho Resource Conservation and Rangeland Development Program. ()

02. NRCS. United States Department of Agriculture Natural Resources Conservation Service. ()

SUBCHAPTER A – RULES FOR ADMINISTRATION OF THE IDAHO RESOURCE CONSERVATION AND RANGELAND DEVELOPMENT PROGRAM

012. PROGRAM POLICY.

01. Administration. It is the policy of the Commission to administer the Resource Conservation and Rangeland Development Program to provide the greatest benefits to all concerned from the agricultural lands and rangelands within the state. ()

02. Equal Opportunity. Each applicant regardless of handicap, race, age, sex, creed, color or national origin, must be given the opportunity to apply for a loan. ()

03. Filing Applications. An application may be filed at anytime during the program year. ()

04. Use of Loan Money in Conjunction with State or Federal Programs. Requests for state or federal cost-share assistance and for loan approval are handled by different governmental agencies and approval for one does not guarantee approval for the other. ()

013. PROGRAM OBJECTIVES.

01. Objectives. The objectives of the RCRDP are to: ()

a. Conserve soil resources. ()

b. Conserve water resources. ()

- c. Improve riparian areas for multiple use benefits. ()
- d. Protect or improve existing beneficial uses of the state’s waters. ()
- e. Conserve and improve fish and wildlife habitat. ()
- f. Increase agricultural productivity of cropland, orchards, pasture and hayland, rangeland, and woodland. ()

02. Achieving Program Objectives. Decisions concerning the use of program funds must be based on achievement of program objectives. The administration of the program must emphasize coordinated resource management planning and decision-making to ensure maximum benefit of funds. ()

014. -- 055. (RESERVED)

056. RESPONSIBILITIES.

- 01. District.** The local District must: ()
 - a. Receive the conservation plan for program participation. ()
 - b. Within sixty (60) days of receipt, review and evaluate the conservation plan to determine if the project is consistent with the District’s program goals and objectives. ()
 - c. Assign a priority of high, medium, or low to the project. ()
 - d. Forward conservation plans to the Commission with a recommendation for funding. ()
 - e. Prepare and forward to the Commission special practice requests. ()
 - f. The local District may assign a priority to practices in the field office technical guide and have that priority ranking apply to all future projects seeking to implement the pre-ranked practices. The local District Board must consider pre-ranking practices at a scheduled Board meeting. The Board’s decision including the name and identification number of the practice(s), the assigned ranking and the recommendation for funding must be reflected in the meeting minutes and be forwarded to the Commission. ()
 - g. If the local District does not review and evaluate a conservation plan within sixty (60) days of receipt, the Commission may review and evaluate the conservation plan and assign a priority ranking for the project based on the District’s five (5) year plan. ()

- 02. Commission.** The Commission must: ()
 - a. Review and evaluate applications. ()
 - b. Approve loans, if: ()
 - i. The applicant has adequate assets for security to protect the state from risk of loss. ()
 - ii. There is reasonable assurance that the borrower can repay the loan. ()
 - iii. Money is available in the RCRDP fund. ()
 - c. Disapprove loans for reasons including but not limited to: ()
 - i. The purpose of the loan is to pay for conservation plan practices that have been implemented prior to Commission approval. ()

- ii. If all the requirements in Paragraph 056.02.b. of these rules are not met. ()
- d. Reconsider loan disapproval if the applicant, within fifteen (15) business days after notice of disapproval, requests the Commission, in writing, to reconsider its determination in any matter affecting the loan or the amount of loan funds. Reconsideration of the determination must take place within ninety (90) business days from the date the written request is received at the time, place, and date determined by the Commission. The applicant must be notified of the time, place, and date and must have the right to appear. ()
- e. After loan approval, execute a promissory note and other security documents with the applicant for loan repayment. ()
- f. Not less than once per year, determine the loan interest rate not to exceed six percent (6%) annually. ()
- g. Prepare an annual report showing RCRDP accomplishments and benefits resulting from use of loan and grant funds. ()
- h. Administer and monitor loan proceeds to assure that the intent of the law is met. ()
- i. Approve or disapprove special practice requests. ()

057. APPLICATION FOR LOAN.

- 01. How to Apply.** Any applicant desiring a loan from the RCRDP fund must: ()
 - a. Prepare and submit a conservation plan. The conservation plan must be presented by the applicant (or representative appointed by the applicant) to the local District Board at a scheduled meeting unless the project includes only practices that have been pre-ranked by the local District in accordance with Paragraph 56.01.f. of these rules. If the project includes only pre-ranked practices, the applicant must submit the conservation plan to the Commission. ()
 - b. Prepare and submit a completed application. The application including all information required under Subsection 57.03 of these rules must be submitted to the Commission. ()
- 02. Two or More Applicants.** Two (2) or more applicants may install a practice(s) as a group providing the loan can be adequately collateralized and all parties agree to joint and several liability. ()
- 03. Application Form.** The application must be on a form prescribed by the Commission and include: ()
 - a. Name of applicant, and the location, size, and type of agricultural enterprise. ()
 - b. Identification and extent of the resource problem (erosion, plant community deterioration, water loss, water quality, low production, etc.). ()
 - c. Statement of applicant's objectives and expected benefits. ()
 - d. Estimate of costs of implementing the project and of total loan funds needed. ()
 - i. Applicant must be required to supply at least five percent (5%) of the total project costs through personal funds or in-kind services. ()
 - ii. Total RCRDP loan funds combined with other funds cannot exceed ninety-five percent (95%) of total project costs. ()
 - e. Applicant's statement of security offered. ()

f. Applicant’s statement of willingness to allow continued monitoring and evaluation of impacts resulting from applied land treatment and management practices. ()

g. All documentation required under Subsection 101.03 of these rules and any other documentation requested by the Commission needed to determine whether there is reasonable assurance that the applicant can repay the loan. ()

h. A copy of the applicant’s conservation plan which becomes a part of the application for assistance. The conservation plan must include: ()

i. A map showing project location and extent of the resource problem. ()

ii. The eligible practices to be installed. ()

iii. Estimated costs of applying the practices. ()

iv. An implementation schedule. ()

v. A statement whereby the applicant agrees to properly maintain and operate installed practices. ()

vi. Needed clearances, easements and rights of way. ()

vii. Any other appropriate documentation needed to complete the implementation of the conservation plan as requested by the local District or Commission. ()

058. SPECIAL PRACTICE(S) APPROVAL FOR LOANS.

01. Special Practice Approval. A special practice must be approved by the Commission before it becomes an eligible practice. ()

02. Special Practice Requests. Special practice requests may be prepared by the local District or the Commission and must include: ()

a. A description of the proposed practice. ()

b. A justification of need for the special practice. ()

c. Standards and specifications for the proposed practice. ()

d. A statement from the appropriate agency as to the technical adequacy of the special practice in solving the resource problem. ()

059. -- 080. (RESERVED)

081. ENCOURAGING PUBLIC BENEFITS WHEN INSTALLING PRACTICES.

District Boards must encourage persons responsible for any aspect of performing practices to promote public benefit by improving or preserving environmental quality and ecological balance when the practices are being installed. Multiple objective achievement and total resource evaluation and treatment must receive high priority consideration for loan funds. When reviewing loan requests the following considerations must be made: ()

01. Preventing Degradation. Preventing or abating pollution and other environmental degradation. ()

02. Benefiting the Community. Benefiting the community by means such as outdoor recreational opportunities or enhancing the appearance of the area. ()

03. Benefiting Habitat. Benefiting fish and wildlife habitat. ()

082. -- 100. (RESERVED)

101. CREDIT GUIDELINES.

01. Standards for Acceptable Loans. There must be adequate assets and collateral for security to protect the state from risk of loss. ()

02. Required Documentation. The applicant must provide documentation to the Commission sufficient to determine the applicant's ability and willingness to repay the loan. Such documentation may include: financial statements; balance sheets; profit and loss statements; driver's license; income tax returns; budgets; credit reports; estimates/quotes; deeds; leases; and other supporting documents as deemed necessary relative to the size, complexity, and financial responsibility of the individual or entity being financed. ()

03. Duty to Inform. After submitting the application and before funds are dispersed, the applicant must inform and provide documentation to the Commission of any significant change of circumstance that may impact their financial standing or ability to repay the loan. ()

04. Field Inspections. The Commission may require a field inspection in order to: ()

a. Determine loan and security positions, provide repayment estimates and verify assets. ()

b. Indicate the applicant's management ability. ()

c. Secure a complete and accurate description of collateral for the security agreement. ()

05. Additional Information Required for Loans Secured with Real Estate. Where real estate is offered as collateral the following information must be provided: ()

a. A legal description of the offered collateral. ()

b. Real estate appraisal, consisting of at least one (1) of the following: ()

i. Copy of appraisal made by a licensed professional appraiser approved by the Commission. ()

ii. Copy of the most recent property tax assessment. ()

iii. Evaluation made by Commission or the local District according to its knowledge of the estimated average value of the property in the area in which the project is to be implemented. ()

c. A map designating the location of the real estate. ()

06. Other Collateral. Any item having tangible value may be accepted as security for these loans. Condition of the collateral must be updated periodically and additions to the security agreement may be required over time. ()

102. LOAN CLOSURE AND ADMINISTRATION.

01. Servicing and Documentation. All loans must be assigned to a loan officer (Commission employee) who must be responsible for servicing the loan. ()

02. Loan Securing Documents. Following approval of the application, the Commission, must prepare all necessary loan securing documents. ()

03. Loan Note and Security Agreement. The loan must be secured by utilizing a promissory note and

security document listing the parties and the collateral, as well as terms and conditions of the loan. A mortgage or deed of trust must be executed and recorded with the county recorder where the collateral is located if the collateral is real property. A security agreement and any other necessary documents must be executed if the collateral is not real property. Appropriate financing statements must be executed and filed with the Secretary of State on all collateral consisting of personal property. ()

04. Fund Obligation. Funds must be obligated when all loan conditions established by the Commission have been met and when all necessary loan securing documents are in order and appropriately signed by the applicant. Funds will then be obligated. Upon notification of fund obligation, the applicant who is now the contractee, may complete implementation of the project. ()

05. Cost Incurred. The applicant is required to cover all costs incurred for loan closure, title insurance, and recording fees. ()

103. IMPLEMENTATION OF AGREED TO PRACTICES.

The applicant may, at their own risk, begin installing practices as identified and scheduled in the conservation plan provided the project is not completed before the loan is approved and the conditions of approval are met. Should the applicant choose to begin installing practices prior to the conditions of approval being met, the Commission may require additional title insurance to protect against intervening materialman's liens. The applicant/contractee has the responsibility to obtain appropriate technical assistance to ensure practices are properly designed, constructed, and managed. The applicant/contractee may install practices themselves or contract work out. Whatever method is used, the applicant/contractee is responsible to ensure the quality of materials and workmanship meets the approved standards and specifications for each practice. ()

01. Practice Completion. Upon completion of the scheduled practice the applicant/contractee must notify the provider of technical assistance. The provider of technical assistance must inspect and document the amount and extent of the installed practice and certify its completion if it meets the quality standards and construction specifications of the practice and notify the applicant/contractee. If the practice does not meet practice standards and specifications the applicant/contractee must be notified by the provider of technical assistance, in writing, of the deficiencies and what needs to be done so the practice meets standards and specifications. ()

02. Submitting Vouchers and Bills. ()

a. The provider of technical assistance must provide a written certification of completion of the project to the Commission. The applicant/contractee must submit invoices, vouchers and bills for the project to the Commission. ()

b. Up to ninety-five percent (95%) of loan funds can be disbursed toward submitted bills during the loan installment period. The remaining loan funds will be disbursed upon receipt of written certification of project completion from the provider of technical assistance. ()

03. Warrant Requests. The Commission staff must prepare warrant request(s). The warrant(s) are paid to the order of the contractee(s) and the vendor, and are mailed to the contractee. ()

04. Drawing Loan Funds. The applicant/contractee must implement the practices as scheduled and the contractee may draw loan funds in multiple disbursements during installation of the project. ()

104. -- 125. (RESERVED)

126. REPAYMENT OF LOAN.

01. Repayment of the Loan. Repayment of the loan, together with interest, must commence no later than two (2) full years from the date the note is signed. ()

02. Repayment Schedule. The repayment schedule must be identified in the loan documents with a fifteen (15) year maximum loan period. One (1) month before payment is due, the commission will mail the contractee a notice of payment due. ()

03. First Payment. The first payment is due as required on the signed loan documents as prepared by the Commission. Any additional interest incurred during the installment period of the loan will be added to the first payment notice. ()

127. FORECLOSURE.

In the event of a contractee not adhering to the payment terms and conditions of the mortgage, promissory note, or security agreement, the Commission may seek foreclosure according to the laws of the state of Idaho. ()

128. -- 150. (RESERVED)

151. LOAN POLICIES.

The maximum amount of any one (1) loan is six hundred thousand dollars (\$600,000). ()

152. -- 199. (RESERVED)

SUBCHAPTER B – RULES FOR ALLOCATION OF FUNDS TO CONSERVATION DISTRICTS

200. ALLOCATION OF FUNDS TO DISTRICTS.

01. Base Funding. The Commission shall determine the dollar amount to allocate equally to conservation districts on an annual basis. As soon as practicable after the start of the fiscal year, the Commission shall immediately distribute base funding to the districts that submitted the required documents during the previous fiscal year. ()

02. Match Funding. Following determination of base funding, the Commission shall review and approve the additional amount of state appropriations available for proportional allocation to each district in match funding. The amount of match funding allocated will be based upon local funds and services received in the previous fiscal year by each conservation district for the general purposes of the district. Funds received for special projects, used as required match for specific grants or projects, or on a fee-for-service basis will not be used to calculate match funding. Once the required documents for match funding are submitted and determined to be complete, the Commission shall distribute match funding to each district as soon as practicable. ()

03. Required Documents. The Commission may require submission of certain documents prior to allocation of base and match funding to districts. These documents may include five (5) year plans, financial and match reports, and performance reports. ()

a. The Board of Supervisors shall certify in writing that the district has examined all documentation submitted and that the statements and representations in the documents are true and accurate. ()

b. The district shall submit any required documents by a date established by the Commission. ()

04. State Budget Requests. The Commission shall conduct a public hearing to consider the needs of the conservation districts on or before June 15th of each year, giving twenty (20) days' written notice of the hearing to each conservation district and to all other persons requesting notice of the hearing. The Commission shall hear and consider testimony at the hearing and all information submitted by the districts prior to submission of the annual budget request to the legislature and governor based upon the criteria of Subsection 010.19 of this rule. ()

LEGAL NOTICE

Summary of Proposed Rulemakings

PUBLIC NOTICE OF INTENT TO PROPOSE OR PROMULGATE NEW OR CHANGED AGENCY RULES

The following agencies of the state of Idaho have published the complete text and all related, pertinent information concerning the re-authorization of state agency administrative rules, with modification as indicated, in this supplemental publication of the state Administrative Bulletin. The Fee(s) or charge(s) re-authorized in this bulletin are currently existing and have been previously promulgated by the agency and reviewed by the Legislature. For full information, including the text of all rulemakings, see the Idaho Administrative Bulletin, **September 16, 2020, Volume 20-9SE**, which can be viewed at: adminrules.idaho.gov.

*The proposed rule public hearing request deadline is September 30, 2020.
The proposed rule written comment submission deadline is October 7, 2020, unless otherwise posted.*

F = designates a fee rule.

*(*PH) = indicates that a public hearing has been scheduled.*

*WMA = with minor amendment – indicates a chapter made corrections
or allowed individual rule subparts to expire, as detailed further in the full bulletin.*

IDAPA 02 – DEPARTMENT OF AGRICULTURE PO BOX 7249, Boise, ID 83707

02-0000-2000F - the following chapters are being re-authorized: Title 01, Chapters 04, 05; and Title 06, Chapter 33.
02-0000-2000FA - the following chapters are being re-authorized: Title 02, Chapters 07, 11-13, 14 (wma), 15; Title 03, Chapter 03 (wma); Title 04, Chapters 03, 05, 19, 26, 32; and Title 06, Chapters 01, 02, 04-06, 09, 10.
02-0701-2000F - the following chapter is being re-authorized: Title 07, Chapter 01.
02-0801-2000F - the following chapter is being re-authorized: Title 08, Chapter 01.

IDAPA 08 – STATE BOARD OF AND STATE DEPARTMENT OF EDUCATION PO BOX 83720, Boise, ID 83720-0037

08-0000-2000F - the following sections are being re-authorized: Title 01, Chapters 11.200, 11.300; and Title 02, Chapters 02.066, 02.075, 03.128

IDAPA 11 – IDAHO STATE POLICE 700 S. Stratford Dr, Meridian, ID 83642

11-0000-2000F - the following chapters are being re-authorized: Title 05, Chapter 01; and Title 10, Chapter 02.
11-0201-2000F - the following chapter is being re-authorized: Title 02, Chapter 01.
11-0400-2000F - the following chapters are being re-authorized: Title 04, Chapters 02, 03, 05, 07, 11, 15.
11-1001-2000F - the following chapter is being re-authorized: Title 10, Chapter 01.
11-1101-2000F - the following chapter is being re-authorized: Title 11, Chapter 01.

IDAPA 12 – DEPARTMENT OF FINANCE PO BOX 83720, Boise, ID 83720-0031

12-0000-2000F - the following chapter is being re-authorized: Title 01, Chapter 08.

IDAPA 13 – DEPARTMENT OF FISH AND GAME PO BOX 25, Boise, ID 83707

13-0000-2000F - the following sections are being re-authorized: Title 01, Chapters 02.200, 02.201, 04.601, 08.263, 10.410, 19.102.

**IDAPA 15 – OFFICE OF THE GOVERNOR
PO BOX 83720, Boise, ID 83720****FOREST PRODUCTS COMMISSION**

15-0300-2000F - the following chapter is being re-authorized: Title 03, Chapter 01.

MILITARY DIVISION

15-0600-2000F - the following chapter is being re-authorized: Title 06, Chapter 03.

STATE LIQUOR DIVISION

15-1000-2000F - the following chapter is being re-authorized: Title 10, Chapter 10.

**IDAPA 16 – DEPARTMENT OF HEALTH AND WELFARE
PO BOX 83720, Boise, ID 83720-0036**

(*PH) *16-0000-2000F* - the following chapters are being re-authorized: Title 01, Chapter 07; Title 02, Chapters 01, 08, 13, 14, 25-27; Title 03, Chapters 03, 18, 19 (wma), 22; Title 04, Chapter 07; Title 05, Chapter 06; Title 06, Chapters 01, 02; and Title 07, Chapter 01.

**IDAPA 17 – IDAHO INDUSTRIAL COMMISSION
PO BOX 83720, Boise, ID 83720-0041**

17-0000-2000F - the following chapter is being re-authorized: Title 01, Chapter 01.

**IDAPA 18 – DEPARTMENT OF INSURANCE
PO BOX 83720, Boise, ID 83720-0043**

18-0000-2000F - the following chapters are being re-authorized: Title 01, Chapter 02; and Title 08, Chapter 02.

**IDAPA 20 – IDAHO DEPARTMENT OF LANDS
PO BOX 83720, Boise, ID 83720-0050**

(*PH) *20-0000-2000F* - the following chapters are being re-authorized: Title 02, Chapter 14; Title 03, Chapters 01, 02 (wma), 03-05, 08, 09, 13-17; Title 04, Chapter 02; Title 06, Chapter 01; and Title 07, Chapter 02.

**IDAPA 21 – DIVISION OF VETERANS SERVICES
315 Collins Rd, Boise, ID 83702**

CUMULATIVE RULEMAKING INDEX OF IDAHO ADMINISTRATIVE RULES

*Office of the Administrative Rules Coordinator
Division of Financial Management
Office of the Governor*

July 1, 1993 – Present

CUMULATIVE RULEMAKING INDEX OF IDAHO ADMINISTRATIVE RULES

This index provides a history of all agency rulemakings beginning with the first Administrative Bulletin in July 1993 to the most recent Bulletin publication. It tracks all rulemaking activities on each chapter of rules by the rulemaking docket numbers and includes negotiated, temporary, proposed, pending and final rules, public hearing notices, vacated rulemaking notices, notice of legislative actions taken on rules, and executive orders of the Governor.

ABRIDGED RULEMAKING INDEX OF IDAHO ADMINISTRATIVE RULES

(Index of Current and Active Rulemakings)

*Office of the Administrative Rules Coordinator
Division of Financial Management*

March 20, 2020 – September 16, 2020
